S. No. Description of the Experiments

1 Singly Linked List and Doubly Linked List

- a) Create and display Singly Linked List.
- b) Given a singly linked list with head node root, write a function to split the linked list into k consecutive linked list "parts".
- c) Find k^{th} node from the end of linked list
- d) Reverse a doubly linked list.
- e) Merge two sorted singly Linked Lists without creating new nodes.

2 a) Implementation of Stack

Arun reads lot of story books and he keeps all the story books piled as a single stack. He wants to write a program to keep the order of the books in the pile. The program must implement the following functionalities.

Add a book to the top of the pile when 1 is followed by the name of the book.

Remove a book from the top of the pile when -1 is given as the input (provided the pile has at least one book).

Print the name of the book on the top of the pile when 2 is given as the input (provided the pile has at least one book).

The program must exit when 0 is given as the input.

b) Implementation of Queue

Riyaz has a book of tickets and wants to store ticket numbers in a data structure. New tickets are added to the end of the booklet. Ticket at the top of the stack is issued to the customer. Implement the data structure should Riyaz use to represent the ticket booklet?

- a) Given an Infix expression convert it into its postfix Equivalent using stack data structure.
- b) Write a program to implement deque using linked lists

4 Binary search tree and traversal

- a) Insertion, Deletion, Searching in a BST
- b) Find k^{th} smallest and k^{th} largest element in a BST

Check if a given sequence represents the in-order, pre-order and post-order traversal of a BST.

5 Write a program for AVL tree having functions for the following operations:

- a) Insert an element (no duplicates are allowed),
- b) Delete an existing element,

Traverse the AVL (in-order, pre-order, and post-order)

6 Heaps using priority queue

Geek hosted a contest and N students participated in it. The score of each student is given by an integer array arr. The task is to print the number of each student (indexes) in the order they appear in the scoreboard. A student with a maximum score appears first. If two people have the same score then higher indexed student appears first.

- 7** Write a C program to Implement Hash Tables with Quadratic Probing.

HICET – Department of Artificial Intelligence and Machine Learning

- 8 a) **Merge Sort**
Write a function that takes two list, each of which is sorted in increasing order, and merges the two into one list, which is in descending order, and returns it. In other words, merge two sorted linked list from their end.
- b) **Quick Sort**
Given an array arr[], its starting position low and its ending position high. Implement the partition() and quickSort() functions to sort the array.
- 9 Implementation of the following graph traversal algorithms:
a) Depth first traversal
b) Breadth first traversal
- 10 **Minimum spanning tree using prim's and kruskal's algorithm.**
Given a graph which consists of several edges connecting its nodes, find a subgraph of the given graph with the following properties: The subgraph contains all the nodes present in the original graph. The subgraph is of minimum overall weight (sum of all edges) among all such subgraphs. It is also required that there is exactly one, exclusive path between any two nodes of the subgraph. One specific node S is fixed as the starting point of finding the subgraph using Prim's Algorithm. Find the total weight or the sum of all edges in the subgraph.
- 11 **Time Complexity**

Illustrative program: 1) Josh went to the market to buy N apples. He can buy any number of the complete lot(s) but not loose apples. He is confused with the price and wants you to figure out the minimum cost to buy exactly N apples. Write an algorithm for Josh to calculate the minimum cost to buy exactly N apples. (Wipro 2022)

Input Format:

- The first line of the input consists of an integer – N, representing the total number of apples that Josh wants to buy.
- The second line consists of two space-separated positive integers – M1 and P1, representing the number of apples in a lot and the lot's price at shop A, respectively.
- The third line consists of two space-separated positive integers-M2 and P2, representing the number of apples in a lot and lot's price at shop B, respectively.

Output Format:

Print a positive integer representing the minimum price at which Josh can buy the apples.

2) Chaman planned to choose a four digit lucky number for his car. His lucky numbers are 3,5 and 7. Help him find the number, whose sum is divisible by 3 or 5 or 7. Provide a valid car number, Fails to provide a valid input then display that number is not a valid car number. (Cognizant)

Note : The input other than 4 digit positive number[includes negative and 0] is considered as invalid.

Illustrative program: 1) You are playing an online game. In the game, a list of N numbers is given. The player has to arrange the numbers so that all the odd numbers of the list come after the even numbers. Write an algorithm to arrange the given list such that all the odd numbers of the list come after the even numbers. (Wipro 2022)

The first line contains N, which represents the number of rows and columns of a matrix. The next N lines contain N values, each representing the values of the matrix.

Output:

A single line containing integers with space, representing the desired traversal. Constraints: $0 < N < 500$

3) A digital machine generates binary data which consists of a string of 0s and 1s. A maximum signal M, in the data, consists of the maximum number of either 1s or 0s appearing consecutively in the data but M can't be at the beginning or end of the string. Design a way to find the length of the maximum signal. (Wipro 2022)

**Dean (Academics)
HiCET**

Print an integer representing the length of the maximum signal.

4) Given a string S(input consisting) of '*' and '#'. The length of the string is variable. The task is to find the minimum number of '*' or '#' to make it a valid string. The string is considered valid if the number of '*' and '#' are equal. The '*' and '#' can be at any position in the string. (TCS NQT 2022)

Note : The output will be a positive or negative integer based on number of '*' and '#' in the input string.

(*>#): positive integer

(#>*): negative integer

(#=#): 0

FUNCTIONS, STRUCTURES AND UNION

Designing Structured Programs – Functions in C – User defined functions – Inter-Function Communication – Standard Function – Passing Arrays to Functions – Passing Pointers to Function – Recursion – Passing an array to a function – typedef – Enumerated types - Structure – Union – Programming Application. Illustrative program: 1) The Caesar cipher is a type of substitution cipher in which each alphabet in the plaintext or messages is shifted by a number of places down the alphabet. For example, with a shift of 1, P would be replaced by Q, Q would become R, and so on. To pass an encrypted message from one person to another, it is first necessary that both parties have the 'Key' for the cipher, so that the sender may encrypt and the receiver may decrypt it. Key is the number of OFFSET to shift the cipher alphabet. Key can have basic shifts from 1 to 25 positions as there are 26 total alphabets. As we are designing custom Caesar Cipher, in addition to alphabets, we are considering numeric digits from 0 to 9. Digits can also be shifted by key places. For Example, if a given plain text contains any digit with values 5 and key=2, then 5 will be replaced by 7, "-"(minus sign) will remain as it is. Key value less than 0 should result into "INVALID INPUT". Write a function CustomCaesarCipher(int key, String message) which will accept plaintext and key as input parameters and returns its cipher text as output. (TCS NQT 2022)

Enter your PlainText: All the best

Enter the Key: 1

The encrypted Text is: BmmuifCftu

BINARY INPUT / OUTPUT

Defining and Opening a file, closing a file - input/output operations on files - error handling during I/O operations - random access to files - Text versus Binary Streams – Standard Library Functions for Files – Converting File type. Illustrative program: 1) Write a C Program to merge contents of two files into a third file. 2) Write a program in C to delete a specific line from a file.

Total Instructional Hours 45

At the end of the course, the learner will be able to

CO1: Develop simple algorithms for arithmetic and logical problems.
