HINDUSTHAN COLLEGE OF ENGINEERING AND TECHNOLOGY

(An Autonomous Institution, Affiliated to Anna University, Chennai
Approved by AICTE, New Delhi & Accredited by NAAC with 'A' Grade)
Coimbatore – 641 032

B.E. MECHANICAL ENGINEERING

HINDUSTHAN
EDUCATIONAL AND CHARITABLE TRUST
HICET

Curriculum & Syllabus

2019-2020

CHOICE BASED CREDIT SYSTEM

VISION OF THE INSTITUTE

To become a premier institution by producing professionals with strong technical knowledge, innovative research skills and high ethical values.

MISSION OF THE INSTITUTE

- To provide academic excellence in technical education through novel teaching methods.
- To empower students with creative skills and leadership qualities.
- To produce dedicated professionals with social responsibility.

VISION OF THE DEPARTMENT

To provide quality technical education in Mechanical Engineering and build holistic professionals who can excel in the engineering establishments and serve for the country with ethical values.

MISSION OF THE DEPARTMENT

M1: To prepare graduates with good technical skills and knowledge.

M2: To prepare graduates with life-long learning skills to meet the requirements in the higher education and in society.

M3: To prepare graduates as successful entrepreneur with employment skills, ethics and human values.

Chairman - BoS
MECH - HiCET

Chairman

Dean (Academics)
HiCET

PROGRAMME EDUCATIONAL OBJECTIVES

PEO 1: Exhibit their sound theoretical, practical skills and knowledge for Successful employments, higher studies, research and entrepreneurial assignments.

PEO 2: Lifelong learning skills, professional ethics and good communication Capabilities along with entrepreneur skills and leadership, so that they can succeed in their life.

PEO 3: Become leaders and innovators by devising engineering solutions for social issues and problems, thus caring for the society.

Chairman - BoS
MECH - HiCET

Chairman

Dean (Academics)
HiCET

PROGRAMME OUTCOMES

Engineering Graduates will be able to:

PO 1. Engineering knowledge:

Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Problem analysis:

Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design/development of solutions:

Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. Conduct investigations of complex problems:

Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5. Modern tool usage:

Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

PO6. The engineer and society:

Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7. Environment and sustainability:

Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

Chairman - BoS
MECH - HiCET

ACADEMIC COUNCIL
Chairman
HINDUSTHAN COLLEGE

Dean (Academics)
HiCET

PO8. Ethics:

Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO9. Individual and team work:

Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10. Communication:

Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO11. Project management and finance:

Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO12. Life-long learning:

Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAMME SPECIFIC OUTCOMES

PSO 1: To design, analyze and apply knowledge in complex engineering problems with time effective software solutions.

PSO 2: To understand the relevance of engineering practices with society and environment and become an ethical team oriented effectively communicating individual with managerial skills and sustained learning ability.

SYLLABUS

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	19HE1101	TECHNICAL ENGLISH	2	1	0	3

(COMMON TO ALL BRANCHES)

Course Objective

- ✓ To facilitate students to communicate effectively with coherence.
- ✓ To train the learners in descriptive communication.
- ✓ To introduce professional communication.
- ✓ To enhance knowledge and to provide the information on corporate environment.
- ✓ To equip the trainers with the necessary skills on critical thinking.

Unit	Description	Instructional Hours
I	**Listening and Speaking** – Opening a conversation, maintaining coherence, turn taking, closing a conversation (excuse, general wishes, positive comments and thanks) **Reading** –Reading articles from newspaper, Reading comprehension **Writing** Chart analysis, process description, Writing instructions **Grammar and Vocabulary**- Tenses, Regular and irregular verb, technical vocabulary	9
II	**Listening and Speaking**- listening to product description, equipment & work place (purpose, appearance, function) **Reading**- Reading technical articles **Writing**- Letter phrases, writing personal letters, **Grammar and Vocabulary**- articles, Cause & effect, Prepositions.	9
III	**Listening and Speaking**- - listening to announcements **Reading**- Reading about technical inventions, research and development **Writing**- Letter inviting a candidate for interview, Job application and resume preparation **Grammar and Vocabulary**- Homophones and Homonyms.	9
IV	**Listening and Speaking**- - Practice telephone skills and telephone etiquette (listening and responding, asking questions).**Reading**- Reading short texts and memos **Writing**- invitation letters, accepting an invitation and declining an invitation **Grammar and Vocabulary**- Modal verbs, Collocation, Conditionals, Subject verb agreement and Pronoun-Antecedent agreement.	9
V	**Listening and Speaking**- listening to technical group discussions and participating in GDs **Reading**- reading biographical writing - **Writing**- Proposal writing, Writing definitions, **Grammar and Vocabulary**- Abbreviation and Acronym, Prefixes & suffixes, phrasal verbs.	9
	Total Instructional Hours	**45**

Course Outcome

CO1- Trained to maintain coherence and communicate effectively.

CO2- Practiced to create and interpret descriptive communication.

CO3- Introduced to gain information of the professional world.

CO4- acquired various types of communication and etiquette.

CO5- Taught to improve interpersonal and intrapersonal skills.

TEXT BOOKS:

T1- Norman Whitby, "Business Benchmark-Pre-intermediate to Intermediate",Cambridge University Press, 2014

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	19MA1102	CALCULUS AND LINEAR ALGEBRA	3	1	0	4

Course Objective

- ✓ Understand the concept of differentiation.
- ✓ Evaluate the functions of several variables which are needed in many branches of engineering.
- ✓ Understand the concept of double integrals.
- ✓ Understand the concept of triple integrals.
- ✓ Develop the skill to use matrix algebra techniques that is needed by engineers for practical applications.

Unit	Description	Instructional Hours
I	**DIFFERENTIAL CALCULUS** Rolle's Theorem – Lagrange's Mean Value Theorem- Maxima and Minima – Taylor's and Maclaurin's Theorem	12
II	**MULTIVARIABLE CALCULUS (DIFFERENTIATION)** Total derivatives - Jacobians – Maxima, M inima and Saddle points - Lagrange's method of undetermined multipliers – Gradient, divergence, curl and derivatives.	12
III	**DOUBLE INTEGRATION** Double integrals in Cartesian coordinates – Area enclosed by the plane curves (excluding surface area) – Green's Theorem (Simple Application) - Stoke's Theorem – Simple Application involving cubes and rectangular parellopiped.	12
IV	**TRIPLE INTEGRATION** Triple integrals in Cartesian co-ordinates – Volume of solids (Sphere, Ellipsoid, Tetrahedron) using Cartesian co-ordinates. Gauss Divergence Theorem – Simple Application involving cubes and rectangular parellopiped.	12
V	**MATRICES** Eigen values and Eigen vectors – Properties of Eigen values and Eigen vectors (without proof) -Cayley - Hamilton Theorem (excluding proof) - Reduction of a quadratic form to canonical form by orthogonal transformation.	12
	Total Instructional Hours	**60**

Course Outcome

CO1- Apply the concept of differentiation in any curve.

CO2- Identify the maximum and minimum values of surfaces.

CO3- Apply double integrals to compute area of plane curves.

CO4- Evaluation of triple integrals to compute volume of solids.

CO5- Calculate Eigen values and Eigen vectors for a matrix which are used to determine the natural frequencies (or Eigen frequencies) of vibration and the shapes of these vibrational modes.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	19PH1151	APPLIED PHYSICS	2	0	2	3

Course Objective

- ✓ Enhance the fundamental knowledge in properties of matter
- ✓ Analysis the oscillatory motions of particles
- ✓ Extend the knowledge about wave optics
- ✓ Gain knowledge about laser and their applications
- ✓ Conversant with principles of optical fiber, types and applications of optical fiber

Unit	Description	Instructional Hours
	PROPERTIES OF MATTER	
I	Elasticity – Hooke's law – Stress-strain diagram - Poisson's ratio – Bending moment –Depression of a cantilever – Derivation of Young's modulus of the material of the beam by Uniform bending theory and experiment. Determination of Young's modulus by uniform bending method	9
II	**OSCILLATONS** Translation motion –Vibration motion – Simple Harmonic motion – Differential Equation of SHM and its solution – Damped harmonic oscillation - Torsion stress and deformations – Torsion pendulum: theory and experiment. Determination of Rigidity modulus – Torsion pendulum	9
III	**WAVE OPTICS** Conditions for sustained Interference – air wedge and it's applications - Diffraction of light – Fresnel and Fraunhofer diffraction at single slit –Diffraction grating – Rayleigh's criterion of resolution power - resolving power of grating. Determination of wavelength of mercury spectrum – spectrometer grating Determination of thickness of a thin wire – Air wedge method	9
IV	**LASER AND APPLICATIONS** Spontaneous emission and stimulated emission – Population inversion – Pumping methods – IV DerivationofEinstein'scoefficients(A&B)–Typeoflasers– Nd:YAGlaserandCO2laser- Laser Applications – Holography – Construction and reconstructionofimages. Determination of Wavelength and particle size using Laser	9
V	**FIBER OPTICS AND APPLICATIONS** Principle and propagation of light through optical fibers – Derivation of numerical aperture andacceptance angle – Classification of optical fibers (based on refractive index, modes and materials) – Fiber optical communication link – Fiber optic sensors – Temperature and displacement sensors	9
	Total Instructional Hours	**45**

Course Outcome

CO1- Illustrate the fundamental properties of matter.

CO2- Discuss the Oscillatory motions of particles.

CO3- Analyze the wavelength of different colors.

CO4- Understand the advanced technology of LASER in the field of Engineering.

CO5- Develop the technology of fiber optical communication in engineering field.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	19CY1151	CHEMISTRY FOR ENGINEERS	2	0	2	3

Course Objective

- ✓ The boiler feed water requirements, related problems and water treatmenttechniques.
- ✓ The principles of polymer chemistry and engineering applications of polymersandcomposites.
- ✓ The principles of electrochemistry and with the mechanism of corrosion anditscontrol.
- ✓ The principles and generation of energy in batteries, nuclear reactors, solar cells, wind mills and fuelcells.
- ✓ The important concepts of spectroscopy and itsapplications

Unit	Description	Instructional Hours
I	**WATERTECHNOLOGY** Hard water and soft water – Disadvantages of hard water- Hardness: types of hardness, simple calculations, estimation of hardness of water – EDTA method – Boiler troubles - Conditioning methods of hard water –External conditioning - demineralization process - desalination: definition, reverse osmosis – Potable watertreatment– breakpointchlorination.Estimationoftotal,permanent and temporary hardness of water by EDTA.	9
II	**POLYMER &COMPOSITES** Polymerization – types of polymerization – addition and condensation polymerization – mechanism of free radical addition polymerization – copolymers – plastics: classification – thermoplastics and thermosetting plastics, preparation, properties and uses of commercial plastics – PVC, Bakelite – moulding of plastics(extrusion and compression); Composites: definition,types of composites–polymer matrix composites (PMC) –FRP	6
III	**ELECTROCHEMISTRY ANDCORROSION** Electrochemical cells – reversible and irreversible cells - EMF- Single electrode potential – Nernst equation (derivation only) – Conductometric titrations. Chemical corrosion – Pilling – Bed worth rule – electrochemical corrosion – different types –galvanic corrosion – differential aeration corrosion – corrosion control sacrificialanodeandimpressedcathodiccurrentmethods-protectivecoatings–paints –constituents and functions. Conductometric titration of strong acid vs strong base (HCl vs NaOH). Conductometrictitration(Mixtureofstrongacidandbase).Conductometricprecipitationtitration using BaCl2 andNa2SO4\	15
IV	**ENERGY SOURCES AND STORAGEDEVICES** Introduction- nuclear energy- nuclear fission- controlled nuclear fission- nuclear fusion differences between nuclear fission and fusion- nuclear chain reactions- nuclear reactor power generator- classification of nuclear reactor- light water reactor- breeder reactor. Batteries and fuel cells: Types of batteries- alkaline battery- lead storage battery- lithium battery- fuel cell H2 -O2 fuel cell applications.	6
V	**ANALYTICALTECHNIQUES** Beer- Lambert's law–UV-visible spectroscopy and IR spectroscopy – principles–instrumentation (block diagram only) – flame photometry – principle – instrumentation (block diagram only) – estimation of sodium by flame photometry – atomic absorption spectroscopy – principles – instrumentation (block diagram only) – estimation of nickel by atomic absorption spectroscopy. Determination of iron content of the water sample using spectrophotometer.(1,10 phenanthroline/ thiocyanate method).	9
	Total Instructional Hours	**45**

Chairman - BoS
MECH - HiCET

SRIDHARA ACADEMIC COUNCIL Chairman SRIDHARA COLLEGE OF ENG & TECH

Dean (Academics)
HiCET

Course Outcome

CO1- Differentiate hard and soft water and to solve the related problems on water purification and its significance in industries and daily life.

CO2- Acquire the basic knowledge of polymers, composites and FRP and their significance.

CO3- Develop knowledge on the basic principles of electrochemistry and understand the causes of corrosion, its consequences to minimize corrosion to improve industrial design.

CO4- Develop knowledge about the renewable energy resources and batteries along with the need of new materials to improve energy storage capabilities.

CO5- Identify the structure and characteristics of unknown/new compound with the help of spectroscopy.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	19CS1151	PYTHON PROGRAMMING AND PRACTICES	2	0	2	3

Course Objective

- ✓ To know the basics of algorithmic problem solving.
- ✓ To read and write simple Python programs
- ✓ To develop Python programs with conditionals and loops and to define Python functions and call them
- ✓ To use Python data structures -- lists, tuples, dictionaries
- ✓ To do input/output with files in Python

Unit	Description	Instructional Hours
I	**ALGORITHMIC PROBLEM SOLVING** Algorithms, building blocks of algorithms (statements, state, control flow, functions), notation(pseudo I code, flow chart, programming language), algorithmic problem solving, simple strategies for developing algorithms(iteration,recursion).Illustrativeproblems:findminimuminalist,insertacardinalistof sorted cards, guess an integer number in a range, Towers of Hanoi..	9
II	**DATA, EXPRESSIONS, STATEMENTS** Python interpreter and interactive mode; values and types: int, float, boolean, string, and list; variables, II expressions, statements, tuple assignment, precedence ofoperators, comments; modules and functions, function definition and use, flow of execution, parameters and arguments. Illustrative programs: exchange the values of two variables, circulate the values of n variables, distance between two points.	9
III	**CONTROL FLOW, FUNCTIONS** Conditionals: Boolean values and operators, conditional (if), alternative (if-else), chained conditional (if- elif-else); Iteration: state, while, for, break, continue, pass; Fruitful functions: return values, parameters, local and global scope, function composition, recursion; Strings: string slices, immutability, string functions and methods, string module; Lists as arrays. Illustrative programs: square root, gcd, exponentiation, sum an array of numbers, linear search, binary search.	9
IV	**LISTS, TUPLES, DICTIONARIES** Lists: list operations, list slices, list methods, list loop, mutability, aliasing, cloning lists, list parameters; IV Tuples: tuple assignment, tuple as return value; Dictionaries:operationsandmethods; advanced list processing - list comprehension; Illustrative programs: selection sort, insertionsort, merge sort, histogram.	9
V	**FILES, MODULES, PACKAGES** Files and exception: text files, reading and writing files, format operator; command line arguments, errors and exceptions, handling exceptions, modules, packages. Illustrative programs: word count, copying file contents.	9
	Total Instructional Hours	**45**

Chairman - BoS
MECH - HiCET

ACADEMIC COUNCIL * HINDUSTHAN COLLEGE OF ENGG & TECH * Chairman

Dean (Academics)
HiCET

Course Outcome

CO1- Develop algorithmic solutions to simplecomputational problems.

CO2- Read, write, execute by hand simple Python programs.

CO3- Analyze the wavelength of different colors.

CO4- Understand the advanced technology of LASER in the field of Engineering.

CO5- Develop the technology of fiber optical communication in engineering field.

HiCET

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	19ME1152	ENGINEERING DRAWING	1	0	4	3

Course Objective

- ✓ To gain the knowledge of Engineer's language of expressing complete details about objects and construction of conics and special curves.
- ✓ To learn about the orthogonal projections of straight lines and planes.
- ✓ To aquire the knowledge of projections of simple solid objects in plan andelevation.
- ✓ To learn about the projection of sections of solids and development ofsurfaces.
- ✓ To study the isometric projections of different objects.

Unit	Description	Instructional Hours
I	**PLANE CURVES** Importance of engineering drawing; drafting instruments; drawing sheets – layout and folding; Lettering and dimensioning, BIS standards, scales. Geometrical constructions, Engineering Curves Conic sections – Construction of ellipse, parabola and hyperbola by eccentricity method. Construction of cycloids and involutes of square and circle – Drawing of tangents and normal to the above curves.	12
II	**PROJECTIONS OF POINTS, LINES AND PLANE SURFACES** Introduction to Orthographic projections- Projection of points. Projection of straight lines inclined to both the planes, Determination of true lengths and true inclinations by rotating line method. Projection of planes (polygonal and circular surfaces) inclined to both the planes by rotating object method (First angle projections only).	12
III	**PROJECTIONS OF SOLIDS** Projection of simple solids like prisms, pyramids, cylinder and cone when the axis is perpendicular and inclined to one plane by rotating object method..	12
IV	**SECTION OF SOLIDS AND DEVELOPMENT OF SURFACES** Sectioning of simple solids with their axis in vertical position when the cutting plane is inclined to one of the principal planes and perpendicular to the other – Obtaining true shape of section. Development of lateral surfaces of simple and sectioned solids – Prisms, pyramids, cylinder and cone. Development of lateral surfaces of truncated solids.	12
V	**ISOMETRIC AND ORTHOGRAPHIC PROJECTIONS** Isometric views and projections simple and truncated solids such as - Prisms, pyramids, cylinders, cones- combination of two solid objects in simple vertical positions. Free hand sketching of multiple views from a pictorial drawing. Basics of drafting using AutoCAD software.	12
	Total Instructional Hours	**60**

Course Outcome

CO1- Understand and interpret the engineering drawings in order to visualize the objects and draw the conics and special curves.

CO2- Draw the orthogonal projections of straight lines and planes.

CO3- Interpret the projections of simple solid objects in plan and elevation.

CO4- Draw the projections of section of solids and development of surfaces of solids.

CO5- Draw the isometric projections and the perspective views of different objects.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	19HE1071	LANGUAGE COMPETENCY ENHANCEMENT COURSE- I (COMMON TO ALL BRANCHES)	0	0	2	1

Course Objective

- ✓ To enhance student language competency
- ✓ To train the students in LSRW skills
- ✓ To develop student communication skills
- ✓ To empower the trainee in business writing skills.
- ✓ To train the students to react to different professional situations

Unit	Description	Instructional Hours
I	**Listening** Listening to technical group discussions and participating in GDs. listening to TED talks. Listen to Interviews & mock interview. Listening short texts and memos.	3
II	**Reading** Reading articles from newspaper, magazine. Reading comprehension. Reading about technical inventions, research and development. Reading short texts and memos.	3
III	**Writing** E-mail writing: Create and send email writing (to enquire about some details, to convey important message to all, to place an order, to share your joy and sad moment). Reply for an email writing.	3
IV	**Speaking** To present a seminar in a specific topic (what is important while choosing or deciding something to do). To respond or answer for general questions (answer for your personal details, about your family, education, your hobbies, your aim etc.,).	3
V	**Speaking** Participate in discussion or interactions (agree or disagree express your statement with a valid reason, involve in discussion to express your perspective on a particular topics).	3
	Total Instructional Hours	**15**

Course Outcome

CO1- Trained to maintain coherence and communicate effectively.
CO2- Practiced to create and interpret descriptive communication.
CO3- Introduced to gain information of the professional world.
CO4- acquired various types of communication and etiquette.
CO5- Taught to improve interpersonal and intrapersonal skills.

HiCET

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	19HE2101	BUSINESS ENGLISH FOR ENGINEERS (COMMON TO ALL BRANCHES)	2	1	0	3

Course Objective

- ✓ To introduce to business communication.
- ✓ To train the students to react to different professional situations.
- ✓ To make the learner familiar with the managerial skills
- ✓ To empower the trainee in business writing skills.
- ✓ To learn to interpret and expertise different content.

Unit	Description	Instructional Hours
I	**Listening and Speaking** – listening and discussing about programme and conference arrangement **Reading** –reading auto biographies of successful personalities **Writing** Formal & informal email writing, Recommendations **Grammar and Vocabulary**- Business vocabulary, Adjectives & adverbs	9
II	**Listening and Speaking-** listening to TED talks **Reading-** Making and interpretation of posters **Writing-** Business letters: letters giving good and bad news, Thank you letter, Congratulating someone on a success" **Grammar and Vocabulary-** Active & passive voice, Spotting errors (Tenses, Preposition, Articles)	9
III	**Listening and Speaking**-travel arrangements and experience **Reading-** travel reviews **Writing-** Business letters (Placing an order, making clarification & complaint letters). **Grammar and Vocabulary-** Direct and Indirect speech,	9
IV	**Listening and Speaking-** Role play - **Reading-** Sequencing of sentence **Writing-** Business report writing (marketing, investigating) **Grammar and Vocabulary-** Connectors,Gerund & infinitive	9
V	**Listening and Speaking-** Listen to Interviews & mock interview **Reading-** Reading short stories, reading profile of a company - **Writing-** Descriptive writing (describing one'sown experience) **Grammar and Vocabulary-** Editing a passage(punctuation, spelling & number rules)	9
	Total Instructional Hours	**45**

Course Outcome

CO1- Introduced to different modes and types of business communication.
CO2- Practiced to face and react to various professional situations efficiently.
CO3- learnt to practice managerial skills.
CO4- Familiarized with proper guidance to business writing.
CO5- Trained to analyze and respond to different types of communication.

TEXT BOOKS:

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	19MA2101	DIFFERENTIAL EQUATIONS AND COMPLEX VARIABLES (AERO, AUTO, MCT, MECH, CIVIL, FT & AGRI)	3	1	0	4

Course Objectives

1. Describe some methods to solve different types of first order differential equations.
2. Solve ordinary differential equations of certain types using Wronskian technique.
3. Use the effective mathematical tools for the solutions of partial differential equations.
4. Describe the construction of analytic functions and conformal mapping.
5. Illustrate Cauchy' s integral theorem and calculus of residues

Unit	Description	Hours
I	**FIRST ORDER ORDINARY DIFFERENTIAL EQUATIONS** Equations of the first order and of the first degree – Homogeneous equations – Exact differential equations – Linear equations – Equations reducible to the linear form – Benoulli's equation .	12
II	**ORDINARY DIFFERENTIAL EQUATIONS OF HIGHER ORDER** Second order linear differential equations with constant and variable co-efficients – Cauchy – Euler equations – Cauchy – Legendre equation – Method of variation of paramers.	12
III	**PARTIAL DIFFERENTIAL EQUATIONS** Formation of partial differential equations by the elmination of arbitrary constants and arbitrary functions – Solution of standard types of first order partial differential equations of the form f(p,q)=0, Clairaut's type : z = px+qy +f(p,q) – Lagrange's linear equation.	12
IV	**COMPLEX DIFFERENTIATION** Functions of complex variables – Analytic functions – Cauchy's – Riemann's equations and sufficient conditions (excluding proof) – Construction of analytic functions – Milne –Thomson's method – Conformal mapping w = A+z , Az, 1/z and bilinear transformations.	12
V	**COMPLEX INTEGRATION** Cauchy's integral theorem – Cauchy's integral formula –Taylor's and Laurent's series (statement only) –Residues - Cauchy's Residue theorem.	12
	Total Instructional Hours	**45+15**

Course Outcomes

CO1: Apply few methods to solve different types of first order differential equations.
CO2: Develop sound knowledge of techniques in solving ordinary differential equations.
CO3 Solve Partial Differential Equations using various methods.
CO4: Infer the knowledge of construction of analytic functions and conformal mapping.
CO5: Evaluate real and complex integrals over suitable closed paths or contours.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	19EE2103	BASICS OF ELECTRICAL AND ELECTRONICS ENGINEERING	3	0	0	3

Course Objectives

1. To understand the basic laws and apply them in Electrical circuits and understand different measuring instruments.
2. To impart knowledge on construction and working of DC and AC machines
3. To create awareness on the methods for electrical safety, load protection basics.
4. To provide knowledge on the fundamentals of semiconductor devices and their applications.
5. To impart knowledge on digital electronics and its principles.

Unit	Description	Instructional Hours
I	**UNIT I: ELECTRICAL CIRCUITS AND MEASUREMENTS** Ohm's Law – Kirchoff's Laws – Steady State Solution of DC Circuits – Introduction to AC Circuits – Waveforms and RMS Value – Power and Power factor – Single Phase circuits - Three Phase Balanced Circuits. Operating Principles of Moving Coil and Moving Iron Instruments - Ammeters and Voltmeters, Dynamometer type Watt meters and Energy meters.	9
II	**UNIT II : ELECTRICAL MACHINES** Construction, Principle of Operation of DC Generators - EMF Equation - Construction, Principle of Operation of DC shunt and series Motors, Single Phase Transformer - EMF Equation, Single phase capacitor start - capacitor run – Construction, Principle of Operation of Three Phase Induction Motor – Applications - (Qualitative Approach only).	9
III	**UNIT III : ELECTRICAL WIRING AND SAFETY** Wiring types and applications: Service mains, meter board and distribution board - Brief discussion on concealed conduit wiring. One way and two way control. Elementary discussion on Circuit protective devices: fuse and Miniature Circuit Breaker (MCB's). Electric shock, precautions against shock, Objectives for Neutral and Earthing, types of earthing; pipe and plate earthing, Residual current circuit breaker.	9
IV	**UNIT IV : SEMICONDUCTOR DEVICES AND APPLICATIONS** Characteristics of PN Junction Diode – Zener Diode and its Characteristics – Zener Effect – Half wave and Full wave Rectifiers – Voltage Regulation. Bipolar Junction Transistor (BJT) – CB, CE, CC Configurations and Characteristics – FET – Characteristics.	9
V	**UNIT V : DIGITAL ELECTRONICS** Binary Number System – Logic Gates – Boolean Algebra – Half and Full Adders – Flip-Flops (RS, JK, T & D), A/D and D/A Conversion (Dual Slope, SAR, Binary-weighted and R-2R).	9
	Total Instructional Hours	**45**

Course Outcomes

CO1	Apply the KVL and KCL in Electrical circuits.
CO2	Explain the constructional features of AC and DC machines.
CO3	Develop awareness on the methods for electrical safety, load protection basics.
CO4	Identify electronics components and use of them to design circuits.
CO5	Develop Combinational and Sequential logic circuits.

Dean (Academics)
HiCET

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	19ME2101	ENGINEERING MECHANICS	3	0	0	3

COURSE OBJECTIVES:

1. To understand basic concepts and force systems in a real world environment.
2. To understand the static equilibrium of particles and rigid bodies both in two dimensions.
3. To understand the moment of surfaces and solids.
4. To understand the effect of static friction on equilibrium.
5. To understand the dynamic equilibrium equation.

Unit	Description	Instructional Hours
I	**STATICS OF PARTICLES** Introduction to engineering mechanics - Classifications, force vector, Law of mechanics, System of forces, transmissibility, Force on a particle – resultant of two forces and several concurrent forces – resolution of a force – equilibrium of a particle — forces in space – equilibrium of a particle in space.	9
II	**EQUILIBRIUM OF RIGID BODIES** Free body diagram, moment of a force – varignon's theorem – moment of a couple –resolution of a force and a couple. Support reactions of the beam.	9
III	**CENTROID, CENTRE OF GRAVITY AND MOMENT OF INERTIA** Centroids of simple plane areas, composite areas, determination of moment of inertia of composite plane figures, polar moment of inertia-radius of gyration – mass moment of inertia of simple solids.	9
IV	**FRICTION** Laws of dry friction – angles of friction- angle of repose-coefficient of static and kinetic friction – – Friction in inclined plane, Ladder friction, Screw friction– rolling resistance – belt friction.	9
V	**DYNAMICS OF PARTICLES** Rectilinear and Curvilinear motion, -Newton's II law – D'Alembert's principle- Energy - potential energy kinetic energy-conservation of energy-work done by a force - work energy method, Impulse momentum method, Impact of bodies, Translation and rotation of the particles.	9
	Total Instructional Hours	**45**

Course Outcomes **Upon completion of the course students can be able to**

CO1: Define and illustrate the basic concepts of force system.
CO2: Identify the resultant force and couple, support reactions of the beam.
CO3: Calculate the Centre of gravity and moment of inertia of an object.
CO4: Examine the friction force of particles and objects for Impending Motion.
CO5: Determine the Displacement, velocity and acceleration of particles and objects

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	19PH2151	MATERIALS SCIENCE (COMMON TO ALL BRANCHES)	2	0	2	3

The student should be able to

Course Objective

1. Acquire fundamental knowledge of semiconducting materials which is related to the engineeringprogram
2. Extend the knowledge about the magneticmaterials
3. Explore the behavior of super conductingmaterials
4. Gain knowledge about Crystal systems
5. Understand the importance of ultrasonic waves

Unit	Description	Instructional Hours
I	**SEMICONDUCTING MATERIALS** Introduction – Intrinsic semiconductor – Compound and elemental semiconductor - direct and indirect band gap of semiconductors. Carrier concentration derivation – Fermi level – Variation of Fermi level with temperature – electrical conductivity – band gap determination. Optical properties of semiconductor – Light through optical fiber(Qualitative). Determination of band gap of a semiconductor Determination of acceptance angle and numerical aperature in an optical fiber	6 3 3
II	**MAGNETIC MATERIALS** Origin of magnetic moment – Bohr magneton – comparison of Dia, Para and Ferro magnetism – Domain theory – Hysteresis – soft and hard magnetic materials – anti ferromagnetic materials – Ferrites and its applications. B – H curve by Magnetic hysteresis experiment	6 3
III	**SUPERCONDUCTING MATERIALS** Superconductivity : properties(Messiner effect, effect of magnetic field, effect of current and isotope effects) – Type I and Type II superconductors – High Tc superconductors – Applications of superconductors –Cryotron and magnetic levitation.	6
IV	**CRYSTAL PHYSICS** Crystal systems - Bravais lattice - Lattice planes - Miller indices - Interplanar spacing in cubic lattice - Atomic radius, Coordination number and Packing factor for SC, BCC and FCC crystal structures.	6
V	**ULTRASONICS** Production – Magnetostrictive generator – Piezoelectric generator – Determination of velocity using acoustic grating – Cavitations – Viscous force – co-efficient of viscosity. Industrial applications – Drilling and welding – Non destructive testing – Ultrasonic pulse echosystem. Determination of velocity of sound and compressibility of liquid – Ultrasonic wave Determination of Coefficient of viscosity of a liquid–Poiseuille's method	6 3 3
	Total Instructional Hours	**45**

After completion of the course the learner will be able to

Course Outcome

CO1: Understand the purpose of acceptor or donor levels and the band gap of a semiconductor
CO2: Interpret the basic idea behind the process of magnetism and its applications in everyday
CO3: Discuss the behavior of super conducting materials
CO4: Illustrate the types and importance of crystal systems
CO5: Evaluate the production of ultrasonics and its applications in NDT

Dean (Academics)
HiCET

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	19CY2151	ENVIRONMENTAL SCIENCES (COMMON TO ALL BRANCHES)	2	0	2	3

The student should be conversant with

Course Objective

1. The natural resources, exploitation and its conservation
2. The importance of environmental education, ecosystem and biodiversity.
3. The knowledge about environmental pollution – sources, effects and control measures of environmental pollution.
4. Scientific, technological, economic and political solutions to environmental problems.
5. An awareness of the national and international concern for environment and its protection.

Unit	Description	Instructional Hours
I	**NATURAL RESOURCES** Renewable and Non renewable resources - Forest resources: Use and over-exploitation, deforestation, timber extraction, mining, dams and their effects on forests and tribal people - Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture – Energy resources: Renewable and non renewable energy sources – Solar energy and wind energy - role of an individual in conservation of naturalresources.	6
II	**ENVIRONMENT, ECOSYSTEMS AND BIODIVERSITY** Importance of environment – need for public awareness - concept of an ecosystem – structure and function of an ecosystem - energy flow in the ecosystem – ecological succession processes – Introduction, types, characteristic features, structure and function of the forest and ponds ecosystem – Introduction to biodiversity definition: types and value of biodiversity – hot-spots of biodiversity – threats to biodiversity– endangered and endemic species of India – conservation of biodiversity: In-situ and ex-situ conservation of biodiversity.	6
III	**ENVIRONMENTALPOLLUTION** Definition – causes, effects and control measures of: Air pollution- Water pollution – Water quality parameters- Soil pollution - Noise pollution- Nuclear hazards – role of an individual in prevention of pollution. **Determination of Dissolved Oxygen in sewage water by Winkler's method. Estimation of alkalinity of water sample by indicator method. Determination of chloride content of water sample by argentometric method.**	6+9=15
IV	**SOCIAL ISSUES AND THE ENVIRONMENT** From unsustainable to sustainable development – urban problems related to energy- environmental ethics: Issues and possible solutions – 12 Principles of green chemistry- Municipal solid waste management. Global issues – Climatic change, acid rain, greenhouse effect and ozone layer depletion – Disaster Management – Tsunami and cyclones. **Determination of pH in beverages.**	6+3=9
V	**HUMAN POPULATION AND THE ENVIRONMENT** Population growth, variation among nations – population explosion – family welfare programme – environment and human health – effect of heavy metals – human rights – value education – HIV / AIDS – women and child welfare –Environmental impact analysis (EIA)- GIS-remote sensing-role of information technology in environment and human health. **Estimation of heavy metal ion (copper). in effluents by EDTA**	6+3=9
	Total Instructional Hours	**45**

Course Outcome

After the completion of the course, the learner will be able to

CO1: Develop an understanding of different natural resources including renewable resources.
CO2: Realise the importance of ecosystem and biodiversity for maintaining ecological balance.
CO3: Understand the causes of environmental pollution and hazards due to manmade activities.
CO4: Demonstrate an appreciation for need for sustainable development and understand the various social issues and solutions to solve the issues.
CO5: Gain knowledge about the importance of women and child education and know about the existing technology to protect environment

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	19ME2001	ENGINEERING PRACTICES LABORATORY	0	0	4	2

OBJECTIVES:

To provide exposure to the students with hands on experience on various basic engineering practices in Civil, Mechanical and Electrical Engineering.

GROUP A (CIVIL & MECHANICAL)

S.No Description of the Experiments

CIVIL AND MECHANICAL ENGINEERING PRACTICES

1. Preparation of Single pipe line and Double pipe line connection by using valves, taps, couplings, unions, reducers and elbows.
2. Arrangement of bricks using English bond for 1brick thick wall and 11/2 brick thick wall for right angle corner junction.
3. Arrangement of bricks using English bond for 1brick thick wall and 11/2 brick thick wall for T junction.
4. Preparation of arc welding of Butt joints, Lap joints and Tee joints.
5. Practice on sheet metal Models– Trays and funnels
6. Hands-on-exercise in wood work, joints by sawing, planning and cutting.
7. Practice on simple step turning, taper turning and drilling.
8. Demonstration on Smithy operation.
9. Demonstration on Foundry operation.
10. Demonstration on Power tools.

GROUP B (ELECTRICAL)

S.No Description of the Experiments

ELECTRICAL ENGINEERINGPRACTICES

1. Residential house wiring using switches, fuse, indicator, lamp and energy meter.
2. Fluorescent lamp wiring.
3. Stair case wiring.
4. Measurement of Electrical quantities – voltage, current, power & power factor in single phasecircuits.
5. Measurement of energy using single phase energy meter.
6. Soldering practice using general purpose PCB.
7. Measurement of Time, Frequency and Peak Value of an Alternating Quantity using CRO and Function Generator.
8. Study of Energy Efficient Equipment's and Measuring Instruments.

Total Practical Hours 45

COURSE OUTCOME:

At the end of the course the students shall be able to

- Fabricate wooden components and pipe connections including plumbing works.
- Fabricate simple weld joints.
- Fabricate different electrical wiring circuits and understand the AC Circuits.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	19HE2071	LANGUAGE COMPETENCY ENHANCEMENT COURSE- II	0	0	2	1

(COMMON TO ALL BRANCHES)

Course Objective

- ✓ **To introduce to business communication.**
- ✓ **To train the students to react to different professional situations.**
- ✓ **To make the learner familiar with the managerial skills**
- ✓ **To empower the trainee in business writing skills.**
- ✓ **To learn to interpret and expertise different content.**

Unit	Description	Instructional Hours
I	**Listening and Speaking** – listening and discussing about programme and conference arrangement **Reading** –reading auto biographies of successful personalities **Writing** Formal & informal email writing, Recommendations **Grammar and Vocabulary**- Business vocabulary, Adjectives & adverbs.	3
II	**Listening and Speaking**- listening to TED talks **Reading**- Making and interpretation of posters **Writing**- Business letters: letters giving good and bad news, Thank you letter, Congratulating someone on a success" **Grammar and Vocabulary**- Active & passive voice, Spotting errors (Tenses, Preposition, Articles).	3
III	**Listening and Speaking**-travel arrangements and experience **Reading**- travel reviews **Writing**- Business letters (Placing an order, making clarification & complaint letters). **Grammar and Vocabulary**- Direct and Indirect speech.	3
IV	**Listening and Speaking**- Role play - **Reading**- Sequencing of sentence **Writing**- Business report writing (marketing, investigating) **Grammar and Vocabulary**- Connectors, Gerund & infinitive.	3
V	**Listening and Speaking**- Listen to Interviews & mock interview **Reading**- Reading short stories, reading profile of a company - **Writing**- Descriptive writing (describing one's own experience) **Grammar and Vocabulary**- Editing a passage(punctuation, spelling & number rules).	3
	Total Instructional Hours	**15**

Course Outcome

CO1- Introduced to different modes and types of business communication.
CO2- Practiced to face and react to various professional situations efficiently.
CO3- learnt to practice managerial skills.
CO4- Familiarized with proper guidance to business writing.
CO5- Trained to analyze and respond to different types of communication.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16MA3103	FOURIER ANALYSIS AND STATISTICS (Common to AERO, AUTO, MECH, EEE and E&I)	3	1	0	4

Course Objective

1. Introduce Fourier series analysis which is central to many applications in engineering.
2. Solve boundary value problems by applying Fourier series.
3. Acquaint with Fourier transform techniques used in wide variety of situations.
4. Provide the necessary basic concepts of some statistical methods.
5. Manipulate different kinds of problems occurring in engineering and technology by applying the design of experiments.

Unit	Description	Instructional Hours
I	**FOURIER SERIES** Dirichlet's conditions- General Fourier Series – Odd and Even Functions – Half range sine and cosine series – Change of Interval - Parseval's Identity - Harmonic analysis. A spring -mass system deriven by an alterating square force, A series circuit with a sqaure –wave voltage, power delievered by a periodic current and modelling radiation intensity.	12
II	**BOUNDARY VALUE PROBLEMS** Classification – solution of one dimensional wave equation – one dimensional heat equation –steady state solutions of two dimensional heat equations (excluding insulated edges) -Fourier series solution in Cartesian coordinates.	12
III	**FOURIER TRANSFORMS** Fourier Transform Pairs - Fourier sine and cosine transforms – Properties - Transforms of Simple functions – Convolution Theorem – Parseval's identity.	12
IV	**TESTING OF HYPOTHESIS** Large sample test based on Normal distribution for single mean and difference of means - Tests based on t (for single mean and difference of means) - F distribution – for testing difference of variance, Chi – Square test for Contingency table (Test for Independency) – Goodness of fit	12
V	**DESIGN OF EXPERIMENTS** One way and two way classifications - Completely randomized design – Randomized block design –Latin square design.	12
	Total Instructional Hours	**60**

Course Outcome

CO1: Understand the mathematical principles of Fourier series which would provide them the ability to formulate and solve some of the physical problems of engineering.
CO2: Acquire the knowledge of application of Fourier series in solving the heat and wave equations.
CO3: Obtain the knowledge of Fourier transform techniques which extend its applications in Electrical circuit analysis, control system design and signal processing.
CO4: Acquire skills in analyzing statistical methods.
CO5: Have a clear perception of the statistical ideas and demonstrate the applications of these techniques to problems drawn from industry, management and other engineering fields.

SYLLABUS

ACADEMIC COUNCIL
Chairman
HINDUSTHAN COLLEGE OF ENGG & TECH

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME3201	MANUFACTURING TECHNOLOGY – I	3	0	0	3

Course Objective

1. To introduce the concepts of some basic manufacturing processes and fabrication techniques
2. To understand the manufacturing of metal components in different methods such as metal casting.
3. To understand the metal joining, metal forming techniques.
4. To understand the bulk forming process such as forging and rolling.
5. To understand the manufacturing of plastic components.

Unit	Description	Instructional Hours
I	**METAL CASTING PROCESSES** Sand Casting: Sand Mould – Type of patterns - Pattern Materials – Pattern allowances –Moulding sand Properties and testing – Cores –Types and applications – Moulding machines– Types and applications; Melting furnaces: Blast and Cupola Furnaces; Special casting processes : Shell - investment – Pressure die casting - Centrifugal Casting - Continuous casting process – Stir casting; Casting Defects.	9
II	**JOINING PROCESSES** Operating principle, basic equipment, merits and applications of: Fusion welding processes: Gas welding - Types – Flame characteristics; Manual metal arc welding – Gas Tungsten arc welding - Gas metal arc welding – Submerged arc welding – Electro slag welding; Operating principle and applications of: Resistance welding - Plasma arc welding – Thermit welding – Electron beam welding – Friction welding and Friction Stir Welding; Brazing and soldering; Weld defects: types, causes and cure.	9
III	**BULK FORMING PROCESSES** Hot working and cold working of metals – Forging processes – Open and closed die forging – forging operations. Rolling of metals– Types of Rolling mills – Flat strip rolling – shape rolling operations – Defects in rolled parts. Tube drawing – Principles of Extrusion – Types – Hot and Cold extrusion Principle of rod and wire drawing.	9
IV	**SHEET METAL FORMING PROCESS** Sheet metal characteristics – shearing, bending and drawing operations – Stretch forming operations – Formability of sheet metal –Special forming processes; Hydro forming – Rubber pad forming – Metal spinning– Explosive forming- Magnetic pulse forming- Peen forming- Super plastic forming – Micro forming.	9
V	**MANUFACTURE OF PLASTIC COMPONENTS** Types and characteristics of plastics –Thermoplastics and Thermosetting plastics – working principles and typical applications of Injection moulding, Plunger and screw machines – Compression moulding, Transfer Moulding – Blow moulding –Rotational moulding – Film blowing – Extrusion – Thermoforming – Bonding of Thermoplastics -industrial applications of plastics.	9
	Total Instructional Hours	**45**

Course Outcome

Upon completion of this course, the students will be able to,

CO1: Apply the different manufacturing process and use this in industry for component production.
CO2: Understand and compare the functions and applications of different manufacturing process.
CO3: Know the metal joining and forming techniques.
CO4: Gain knowledge about deformation process.
CO5: Understand plastic component manufacturing.

HiCET

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME3202	ENGINEERING THERMODYNAMICS (COMMON TO MECHANICAL AND AUTOMOBILE ENGINEERING)	3	1	0	4

Course Objective

1. Understand and quantify the energy conversion.
2. Understand the energy degradation in thermodynamic systems.
3. Understand the behavior of pure substances and working principle of steam power cycles.
4. Understand the thermodynamic relations.
5. Understand the properties of atmospheric air and its applications.

Unit	Description	Instructional Hours
I	**BASIC CONCEPTS AND FIRST LAW** Basic concepts - concept of continuum, microscopic and macroscopic approach, path and point functions. Intensive and extensive, total and specific quantities, thermodynamic system, equilibrium, state, path and process. Quasi-static, reversible and irreversible processes. Heat and work transfer, definition and comparison, sign convention. Displacement work and other modes of work .P-V diagram. Zeroth law of thermodynamics – concept of temperature and thermal equilibrium. First law of thermodynamics –application to closed and open systems – steady and unsteady flow processes.	12
II	**SECOND LAW AND AVAILABILITY ANALYSIS** Heat Reservoir, source and sink. Heat Engine, Refrigerator, and Heat pump. Statements of second law and its corollaries. Carnot cycle, Reversed Carnot cycle, Performance, Clausius inequality. Concept of entropy, T-s diagram, Tds Equations, entropy change of - pure substance, ideal gases – different processes, principle of increase in entropy and availability analysis.	12
III	**PROPERTIES OF PURE SUBSTANCE AND STEAM POWER CYCLE** Formation of steam and its thermodynamic properties, p-v, p-T, T-v, T-s, h-s diagrams. p-v-T surface. Use of Steam Table and Mollier Chart. Determination of dryness fraction. Estimation of steam properties. Ideal and actual Rankine cycles, Cycle Improvement Methods - Reheat and Regenerative cycles, Economiser, Preheater.	12
IV	**IDEAL, REAL AND GASES GAS MIXTURES AND THERMODYNAMIC RELATIONS** Properties of Ideal and real gases, Equations of state, Vander Waals equation for ideal and real gases, reduced properties, Compressibility factor, Generalised Compressibility Chart and its use. Gas mixtures – mole and mass fractions, Daltons law, gas constant, density, change in internal energy, enthalpy, entropy and Gibbs function. Maxwell relations, Tds Equations, Difference and ratio of heat capacities, Energy equation, Joule-Thomson Coefficient, Clausius Clapeyron equation.	12
V	**PSYCHROMETRY** Psychrometric properties, Property calculations of air vapour mixtures using psychrometric chart and expressions. Psychrometric process: sensible heating and cooling, humidification, dehumidification, adiabatic saturation, adiabatic mixing of two streams. Applications: evaporative coolers, drying, cooling towers etc.	12
	Total Instructional Hours	**60**

Course Outcome

Upon completion of this course, the students will be able to:
CO1: Understand the thermodynamic principles and its applications.
CO2: Quantify the energy conversion in various thermal systems.
CO3: Identify the losses and inefficient components in the thermodynamic system.
CO4: Apply the thermodynamic principles for predicting the properties of steam, gas and gas mixtures.
CO5: Apply the psychrometric principles for design of air conditioning systems.

PROGRAMME	COURSE CODE	NAME OF THE COURSE	L	T	P	C
B.E.	16ME3203	FLUID MECHANICS AND MACHINERY	3	1	0	4

Course Objective

1. To understand the behavior of fluid particles under rest and moving conditions.
2. To study important concept of flow through pipes.
3. To gain knowledge about the Dimensional and model analysis.
4. To learn about the performance of pump and its types.
5. To know the design considerations of Turbine.

Unit	Description	Instructional Hours
I	**FLUID PROPERTIES AND FLOW CHARACTERISTICS** Properties of fluids- mass density, specific weight, specific volume, specific gravity, viscosity, compressibility, surface tension, capillarity, vapor pressure and cavitation. Fluid Flow–continuity equation, Euler's equation, Bernoulli's theorem and its applications, momentum equation, moment of momentum equation. Pascal's law-Pressure measurement and flow measurement devices (Description only).	12
II	**BOUNDARY LAYER CONCEPT AND FLOW THROUGH PIPES** Boundary layer concepts – types of boundary layer thickness- Losses of energy in pipes -Moody diagram-Darcy Weisbach equation –friction factor– Flow through pipes in series, parallel and equivalent pipe. Hydrostatic forces on surfaces-plane surfaces.	12
III	**DIMENSIONAL AND MODEL ANALYSIS** Dimensions, Dimensional homogeneity, methods of dimensional analysis-Rayleigh and Buckingham's-π theorem – Model analysis- Similitude –types of similarities - classification of models.	12
IV	**PUMPS** Classifications of pumps –Centrifugal pumps– work done by the impeller -Head and efficiencies-performance curves-velocity triangles - Multistage pumps - priming- Reciprocating pump-slip, Indicator diagram, Air vessel – Rotary pumps(Description only).	12
V	**TURBINES** Classification of turbines – heads and efficiencies – velocity triangles. Axial, radial and mixed flow turbines. Pelton wheel, Francis turbine and Kaplan turbines- work done by water on the runner – draft tube. Specific speed– performance curves.	12
	Total Instructional Hours	**60**

Course Outcome

At the end of the course The Students will be able to,

CO1: Apply the properties of fluids and flow characteristics.
CO2: Apply the momentum principle and losses in pipes in solving real life problems.
CO3: Perform the Dimensional and Model analysis.
CO4: Design suitable types of pumps for various applications.
CO5: Analyze the performance of various hydraulic turbines.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME3204	STRENGTH OF MATERIALS (COMMON TO MECHANICAL AND AUTOMOBILE ENGINEERING)	3	0	0	3

Course Objective

1. To study the principles of simple stress, strain and deformation in components.
2. To assess stresses and deformations through mathematical models of beams.
3. To learn about torsion of components.
4. Gain knowledge about deflections on beams.
5. Understand the stress analysis concepts in two dimension objects.

Unit	Description	Instructional Hours
I	**STRESS- STRAIN AND DEFORMATION OF SOLIDS 12** Rigid and Deformable bodies – Mechanical Properties – Stress-Strain Curve - Tension, Compression and Shear stresses – Deformation of simple and compound bars – Thermal stresses – Elastic constants – Volumetric strains, Principal Planes & Stresses - Mohr's circle.	9
II	**BEAMS - LOADS AND STRESSES 12** Types of beams: Supports and Loads – Shear force and Bending Moment in beams – Cantilever, Simply supported and Overhanging beams – Stresses in beams – Theory of simple bending – Stress variation along the length and in the beam section – Transverse shear stresses in beams.	9
III	**TORSION** Formulation-stress and deformation in circular and hollow shafts – Stepped shaft – Deflection in shaft subjected to various boundary conditions–Stresses in helical springs – Deflection of helical springs, Leaf springs.	9
IV	**BEAM DEFLECTION** Double integration method – Macaulay Method – Area moment Method for computation of slopes and deflection in beams – Conjugate beam and Strain Energy problems.	9
V	**ANALYSIS OF STRESSES IN TWO DIMENSIONS** Stresses in Thin cylindrical shell due to internal pressure, Circumferential and Longitudinal stresses and deformation in Thin Cylinders – spherical shells subjected to internal pressure – Deformation in spherical shells.	9
	Total Instructional Hours	**45**

Course Outcome

CO1: Apply mathematical knowledge to estimate the deformation behavior of simple structures.
CO2: Calculate shear force and bending moment in different types of beams.
CO3: Determine torsion in shafts and stresses in various types of springs.
CO4: Analyze deflection in various beams.
CO5: Estimate the stresses developed in cylinders and spherical shells.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16EE3231	ELECTRICAL DRIVES AND CONTROLS	3	0	0	3

Course Objective

1. Acquire the fundamentals of the electrical drive system.
2. Learn the Different speed control methods of electrical drive system.
3. Identify the various starters and controllers for electrical motors.
4. Gain the knowledge on speed control methods for electrical drives.
5. Study the power electronics based speed control of electrical drives

Unit	Description	Instructional Hours
I	**INTRODUCTION** Basic Elements – Types of Electric Drives – factors influence the choice of electrical drives – Heating and cooling curves – Loading conditions and classes of duty – Selection of power rating for drive motors with regard to thermal overloading and Load variation factors.	9
II	**DRIVE MOTOR CHARACTERISTICS** Mechanical characteristics – Speed-Torque characteristics of various types of load and drive motors – Braking of Electrical motors – DC motors: Shunt, series and compound - single phase and three phase induction motors. (Only elementary aspects of the above types are expected).	9
III	**STARTING METHODS** Types of D.C Motor starters – Typical control circuits for shunt and series motors –-Three phase squirrel cage and slip ring induction motors, Control devices.	9
IV	**CONVENTIONAL AND SOLID STATE SPEED CONTROL OF D.C.DRIVES** Speed control of DC series and shunt motors - Ward-Leonard control system - Using controlled rectifiers and DC choppers –applications. (Qualitative Treatment).	9
V	**CONVENTIONAL AND SOLID STATE SPEED CONTROL OF A.C. DRIVES** Speed control of three phase induction motor –VFD motor— Voltage control, voltage / frequency control, slip power recovery scheme – Using inverters and AC voltage regulators – applications. (Qualitative Treatment).	9
	Total Instructional Hours	**45**

Course Outcome

CO1: Identify the basic components of electric drive systems.
CO2: Describe the performance characteristics of electrical motor.
CO3: Design the starters for electrical motors used in drives.
CO4: Apply the speed control techniques of electrical drives.
CO5: Investigate the power converter based speed control of AC & DC drives.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME3002	SOLID AND FLUID MECHANICS LAB	0	0	4	2

Course Objective

1. Apply the knowledge gained on flow meters by experiments.
2. Understand the characteristics of pumps and turbines through practical learning.
3. To familiarize with the working of pumps and turbines through practical learning.
4. Understand the materials behavior and strength due to tension, compression and torsion by Experiments.
5. Carry out the tests of materials before selecting for a particular application.

Expt. No.	Description of the Experiments	Total Practical Hours
1.	Determination of the Coefficient of discharge of given Venturi meter & Orifice meter.	
2.	Determination of friction factor of a pipe.	
3.	Conducting experiments and drawing the characteristic curves of Centrifugal pump or Submersible pump.	
4.	Conducting experiments and drawing the characteristic curves of reciprocating pump.	
5.	Conducting experiments and drawing the characteristic curves of Pelton wheel.	
6.	Conducting experiments and drawing the characteristics curves of Francis turbine.	
7.	Tension test on given specimen using universal testing machine.	
8.	Deflection test on beams.	
9.	Torsion test on given specimen.	
10.	Hardness tests (Brinels and Rockwell).	
11.	Compression test on helical springs.	
12.	Testing of impact resistance of steels.	
	Total Practical Hours	**45**

Course Outcome

At the end of the course, the student can

CO1: Determine the performance characteristics of pumps and turbines.

CO2: Demonstrate the flow rate of venturi meter and orifice meter.

CO3: Evaluate the material behavior and strength due to tension, compression and torsion by experiments.

CO4: Carryout various tests of materials.

CO5: Examine the properties of materials before selecting for a particular application.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16EE3031	ELECTRICAL ENGINEERING LAB	0	0	4	2

Course Outcome

CO1: Experimentally obtain the load characteristics of various DC generators and motors.
CO2: Analyze the operation of Electric Machines under different loading conditions.
CO3: Evaluate the efficiency and the regulation of transformers from load test and no-load test.
CO4: Construct and test the experimental procedures on different types of Electrical Machines.
CO5: Design and analysis the various speed control technique of electrical machines.

Expt. No.	Description of the Experiments
1.	Open circuit characteristics and Load characteristics of DC shunt generator.
2.	Load test on DC Series motor.
3.	Load test on DC Shunt motor.
4.	Speed control of DC shunt motor (Armature and Field control).
5.	Load test on DC Compound motor.
6.	Open circuit and short circuit test on single phase transformer.
7.	Study of starters for DC motors.
8.	Load test on single phase induction motor.
9.	Load test on three phase squirrel cage induction motor.
10.	Speed control of three phase slip ring induction motor.
11.	Speed control of three phase squirrel cage induction motor.
12.	Study of starters for AC motors.
	Total practical hours **45**

Course Outcome

CO1: Experimentally obtain the load characteristics of various DC generators and motors.
CO2: Analyze the operation of Electric Machines under different loading conditions.
CO3: Evaluate the efficiency and the regulation of transformers from load test and No-load test.
CO4: Construct and test the experimental procedures on different types of Electrical Machines.
CO5: Design and analysis the various speed control technique of electrical machines.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16MA4107	NUMERICAL METHODS (Common to AERO, AUTO,MECH,EEE &EIE)	3	1	0	4

Course Objective

1. Solve algebraic, transcendental and system of linear equations by using various techniques.
2. Apply various methods to find the intermediate values for the given data.
3. Be Familiar with the concepts of numerical differentiation and numerical integration of the unknown functions.
4. Understand the concept of solving Ordinary differential equations by applying single and multi step methods.
5. Appraise the methods introduced in the solution of ordinary differential equations and partial differential equations.

Unit	Description	Instructional Hours
I	**SOLUTION OF ALGEBRAIC AND TRANSCENDENTAL EQUATIONS** Solution of equation – Fixed point iteration : x = g(x) method – Newton-Raphson method – Solution of linear system by Gauss Elimination and Gauss Jordan method – Iterative method : Gauss seidel method.	12
II	**INTERPOLATION** Interpolation: Newton's forward and backward difference formulae – Lagrangian interpolation for unequal intervals – Divided difference for unequal intervals : Newton's divided difference formula.	12
III	**NUMERICAL DIFFERENTIATION AND INTEGRATION** Differentiation using interpolation formula – Newton's forward and backward interpolation formulae for equal intervals – Newton's divided difference formula for unequal intervals - Numerical integration by Trapezoidal and Simpson's 1/3 and 3/8 rules – Romberg's method – Double integration using Trapezoidal and Simpson's rules	12
IV	**INITIAL VALUE PROBLEMS FOR ORDINARY DIFFERENTIAL EQUATIONS** Single step methods: Taylor's series method – Euler and Modified Euler methods for first order equation – Fourth order Runge- kutta method for solving first order equations – Multi step method: Milne's predictor and corrector method and Adam – Bash forth predictor corrector method.	12
V	**BOUNDARY VALUE PROBLEMS IN ORDINARY AND PARTIAL DIFFERENTIAL EQUATIONS** Finite difference solution of second order ordinary differential equation – Finite difference solution of one dimensional heat equation by explicit and implicit methods – One dimensional Wave equation – Two dimensional Heat equations – Laplace and Poisson Equations.	12
	Total Instructional Hours	**60**

Course Outcome

CO1: Solve the system of linear algebraic equations representing steady state models and non linear equations arising in the field of engineering.
CO2: Understand the concept of interpolation in both cases of equal and unequal intervals.
CO3: Express the information from discrete data set through numerical differentiation and summary information through numerical integration.
CO4: Classify and solve ordinary differential equations by using single and multi step methods.
CO5: Acquire knowledge of finding the solution of ordinary and partial differential equations which are useful in attempting any engineering problems.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME4201	MANUFACTURING TECHNOLOGY – II	3	0	0	3

Course Objective

1. To provide an overview of Metal Cutting Theory concepts.
2. To educate students on the working and various functions of Turning Machines.
3. To give exposure about Shaping, Milling and Gear cutting machines.
4. To provide knowledge about grinding and broaching machines.
5. To provide the basic concepts in CNC machines.

Unit	Description	Instructional Hours
I	**THEORY OF METAL CUTTING** Mechanism of metal cutting – types – cutting force – chip formation – Merchant's circle diagram – calculations – tool geometry – machinability – tool wear – tool life – cutting tool materials – cutting fluids – types.	9
II	**TURNING MACHINES** Centre lathe, constructional features, specification, operations – taper turning methods, thread cutting methods, special attachments. Capstan and turret lathes- tool layout – automatic lathes: semi-automatic – single spindle: Swiss type, automatic screw type – multi spindle.	9
III	**SHAPER, SLOTTING, MILLING AND GEAR CUTTING MACHINES** Shaper - Types of operations. Slotting machine- Types of operations. Milling operations-types of milling cutter. Gear cutting – forming and generation principle and construction of gear milling, hobbing and gear shaping processes –finishing of gears. Drilling machine - Types of operations.	9
IV	**ABRASIVE PROCESS AND BROACHING** Grinding, broaching, spinning: grinding wheel – specifications and selection, types of grinding process– cylindrical grinding, surface grinding, centreless grinding and internal grinding- Typical applications. Broaching machines: broach construction – push, pull, surface and continuous broaching machines and its applications. Super finishing – honing and lapping.	9
V	**CNC MACHINING** Numerical Control (NC) machine tools – CNC types, constructional details, special features, machining centre, part programming fundamentals CNC – manual part programming – micromachining.	9
	Total Instructional Hours	**45**

Course Outcome

At the end of the course, the students can,

CO1: Apply the basics of Manufacturing machine tools and metal cutting theory to select suitable operation.
CO2: Fabricate engineering components using various lathes and special attachments.
CO3: Acquire the various special machine tool construction and operations.
CO4: Acquire the knowledge about abrasive process and gear cutting operations.
CO5: Acquire knowledge about the CNC machine tools.

Dean (Academics)
HiCET

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME4202	THERMAL ENGINEERING	3	0	0	3

Course Objective

1. To integrate the concepts, laws and methodologies from the first course in thermodynamics into analysis of cyclic processes.
2. To familiarize with the types and working principles of two stroke and four stroke engines.
3. To apply the thermodynamic concepts to IC Engines and its components.
4. To apply the thermodynamic laws to steam turbines, steam nozzles and air compressors.
5. To give exposure on refrigeration cycles and psychometry.

Unit	Description	Instructional Hours
I	**GAS POWER CYCLES** Otto, Diesel, Dual, Brayton and Stirling cycles, Calculation of mean effective pressure, and air standard efficiency - Comparison of cycles.	8
II	**INTERNAL COMBUSTION ENGINES** Classification - Components and their functions. Valve timing and port timing diagrams – actual and theoretical p-V diagrams of four stroke and two stroke engines. Fuel supply systems for SI and CI engines. Types of ignition systems- Principles of Combustion and knocking in SI and CI Engines. Lubrication and Cooling systems. Performance calculations of IC engines, Engine test methods, Emission norms.	10
III	**STEAM NOZZLES AND TURBINES** Flow of steam through nozzles, shapes of nozzles, effect of friction, critical pressure ratio, supersaturated flow. Impulse and Reaction principles, compounding, velocity diagram for simple steam turbines, speed regulations –Governors.	9
IV	**AIR COMPRESSOR, FANS AND BLOWERS** Classification and working principle of various types of compressors, work of compression with and without clearance, Volumetric efficiency, Isothermal efficiency and Isentropic efficiency of reciprocating compressors, Multistage air compressor and inter cooling –work of multistage air compressor, Fans-types, Blower-types and its industrial applications.	9
V	**REFRIGERATION AND AIR CONDITIONING** Vapour compression cycle, Sub cooling and super heating, refrigerants, performance calculations - working principle of vapour absorption system (Ammonia –Water, Lithium bromide – water systems - Description only). Air conditioning system - types and working principle. Cooling load calculations: SHF, RSHF, GSHF, ESHF, bypass factor.	9
	Total Instructional Hours	**45**

Course Outcome

Upon completion of the course, the students will be able to

CO1: Understand the process of air standard cycles.

CO2: Demonstrate knowledge of the operating characteristics of common internal combustion engines.

CO3: Apply the thermodynamic laws to various thermal equipments like steam nozzles and steam turbines.

CO4: Understand the types of compressors, fans and blowers and its applications.

CO5: Understand the principles of air-conditioning system and estimate the cooling loads.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME4203	KINEMATICS OF MACHINERY	3	1	0	4

Course Objective

1. To understand the purpose of kinematics, Kinematic joint and mechanism and to study the relative motion of parts in a machine without taking into consideration the forces involved.
2. To understand the velocity and acceleration concepts and the methodology using graphical methods and principles and application of four bar chain and slider crank Mechanism.
3. To understand the theories and applications of cams.
4. To understand applications of different types of gears and gear profiles and its efficiency and gear trains.
5. To understand principles of friction applied to screw threads, clutches, brakes, belt and rope drives.

Unit	Description	Instructional Hours
I	**BASICS OF MECHANISMS** Introduction - Links - Pairs - Chain - Mechanism - Machine structure - Degrees of freedom - Four bar chains - Terminology and definition - Planar, Spherical and Spatial Mechanisms - Grashoff's law - Kutzback criterion - Grubler's criterion for plane mechanism. Inversion of mechanisms - Four bar, single slider crank and double slider crank mechanisms - Simple problems -Mechanical advantage – Transmission Angle – Description of some common mechanisms – Quick return mechanisms, Dwell mechanisms, Ratchets and Escapements, Universal Joint.	12
II	**KINEMATICS OF LINKAGE MECHANISMS** Displacement, velocity and acceleration analysis of simple mechanisms – Graphical method – Velocity and acceleration polygons – Velocity analysis using relative velocity method- Coriolis component of Acceleration.	12
III	**KINEMATICS OF CAM MECHANISMS** Types of cams and followers - Follower motion - Uniform, Parabolic, SHM and cycloidal. Cam terminology - Cam profiles construction for roller, flat faced and knife edge follower types - pressure angle - Derivatives of Follower motion - High speed cams - circular arc and tangent cams – Standard cam motion - Pressure angle and undercutting - Sizing of Cams.	12
IV	**GEARS AND GEAR TRAINS** Law of toothed gearing – Involutes and cycloidal tooth profiles – Spur Gear terminology and definitions – Gear tooth action – contact ratio – Interference and undercutting – Non–standard gear teeth – Helical, Bevel, Worm, Rack and Pinion gears – Gear trains – Speed ratio, train value – Parallel axis gear trains – Epicyclic Gear Trains – Differentials – Automobile gear box.	12
V	**FRICTION** Surface contacts –Friction in screw threads -Friction clutches -Belt and rope drives, Friction aspects in Brakes.	12
	Total Instructional Hours	**60**

Course Outcome

CO1: Classify mechanisms and inversions and determine mobility of a mechanism.
CO2: Estimate velocity and acceleration by graphical and analytical methods.
CO3: Construct cam profiles for various followers and their motions.
CO4: Classify various gear trains and apply to automation.
CO5: Apply friction principles to clutches, belt, brake and screw.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME4204	ENGINEERING MATERIALS AND METALLURGY	3	0	0	3

Course Objective

1. To Learn materials are formed and their classification based on atomic arrangement.
2. To Study the mechanical behavior of metallic and its Importance.
3. To study the mechanical behavior of metals.
4. To Gain knowledge on different types of materials and their applications.
5. To Study the properties of nonferrous alloys, polymers and ceramics.

Unit	Description	Instructional Hours
I	**BASIC CONCEPTS** Introduction to Materials Science, Defects-Point, Line, Area, Volume-Slip planes and slip systems, Schmidt's rule, Polymorphism and allotropy -Solidification–Nucleation and Growth mechanism, Cooling curve of pure metal and alloy.	9
II	**PHASE DIAGRAMS AND PHASE TRANSFORMATION** Phase, Gibbs's Phase rule, Solubility and Solid Solutions -Iso-morphous alloy system -Binary Eutectic alloy system (Lead-Tin System), Eutectoid and Peritectic system, Iron-Iron carbide phase diagram-Invariant reactions, Evolution of Microstructure, Phase Transformation-Temperature-Time-Transformation (TTT) and Continuous Cooling Transformation (CCT) Diagrams -Steels, Cast Irons and Stainless steels –types and applications –Effects of alloying elements.	9
III	**HEAT TREATMENT & SURFACE HEAT TREATMENTS** Heat Treatment –Annealing and its types, Normalizing, Aus-tempering, Mar-tempering, Quenching and Temper heat treatment, Hardenability –Basic concepts of wear and corrosion & their types - Surface hardening processes –Flame and induction hardening, Carburizing, Nitriding and Carbonitriding.	9
IV	**MECHANICAL PROPERTIES OF MATERIALS** Tension, Compression, Shear and Tensional Test of Metals -Stress-strain behavior of ferrous & non-ferrous metals, polymer and ceramics -True stress and strain relations -Flexural Test, Hardness measurement tests, Fracture of metals -Ductile Fracture, Brittle Fracture, Fatigue –Endurance limit of ferrous and non-ferrous metals –Fatigue test; Creep and stress rupture–mechanism of creep –stages of creep and creep test, Strengthening.	9
V	**NON FERROUS ALLOYS & ADVANCED MATERIALS** Non Ferrous Alloys of Aluminum, Magnesium, Copper, Nickel, Titanium –Microstructure and mechanical property relationships; Composites Classification, Processing, Metal Matrix, Ceramic Matrix, polymer matrix –properties and applications; Ceramics –Alumina, Zirconium, Silicon Carbide, Sialons, Reaction Bonded Silicon Nitride(RBSN), Processing, properties and applications of ceramics, Glasses –properties and applications.	9
	Total Instructional Hours	**45**

Course Outcome

CO1: Visualize the basic concepts in material science.
CO2: Analyze phase diagrams and explain iron-carbon equilibrium diagram.
CO3: Select an appropriate heat treatment process to impart a desired property for a given ferrous alloy.
CO4: Analyse the various mechanical properties of materials.
CO5: Select an appropriate alloying element to impart a desired property for a given non ferrous alloy.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME4205	MACHINE DRAWING	1	4	0	3

Course Objective

1. To impart the knowledge of limits, fits and tolerances, orthographic-sectional and assembly drawing procedures.
2. To provide the practice to draw assembly orthographic views of various machine parts.
3. To provide the practice and develop the detailed part drawing.
4. Understand the shape and structure of different types of screws, keys and Couplings.
5. To provide the practice and develop the detailed mechanical components drawing.

Unit	Description	Instructional Hours
I	**LIMITS, FITS AND TOLERANCES** Limit System- Tolerance, Limits , Deviation, Actual Deviation, Upper Deviation, Lower Deviation, Allowance, Basic Size, Design Size, Actual Size. Fits-Types, Tolerances of Form and Position-Form and Position Variation, Geometrical Tolerance, Tolerance Zone, Indicating Geometrical Tolerances. Indication of Surface Roughness, Standard Abbreviations and Symbols used in industries.	5
II	**SECTIONAL VIEWS** Sections- Hatching of Sections, Cutting Planes, Revolved or Removed Section, Sectional Views- Full Section, Half Sections and Auxiliary Sections.	5
III	**MACHINE ELEMENT DRAWINGS** Drawing standards and Designation of Bolts, nuts, screws, keys, pins, Rivets, Welded Joints- Dimensioning of Welds, Belt Driven Pulleys, Chain and Gears Drives.	7
IV	**DRAWINGS OF VARIOUS VIEWS** **Shaft joints:** Cotter joint and Knuckle joint. **Keys & Shaft coupling:** Flanged, Flexible, Universal and Oldhams coupling. **Shaft bearing**: Solid and bush bearing, Plummer block, Footstep bearing. **Pulley**: Belt pulley, V belt pulley, Fast and loose pulley, Speed cone pulley, Built up pulley.	14
V	**ASSEMBLY DRAWING OF MECHANICAL COMPONENTS** Lathe Tail stock, Machine Vice, Pipe Vice, Simple Eccentric, Screw jack, Stuffing Box, Plummer Block, Swivel Bearing and Safety Valve.	14
	Total Instructional Hours	**45**

Course Outcome

Students should be able to:

1. Use limits, fits and tolerances, orthographic-sectional and assembly drawing procedures in real world problems.
2. Apply sectional view, assembly and orthographic concepts to draw various machine parts.
3. Understand the Concept of fasteners and different joints.
4. Draw and demonstrate the projections and sectional views of various mechanical elements.
5. Construct assembly drawings of mechanical components.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME4001	MANUFACTURING TECHNOLOGY LAB - II	0	0	4	2

Course Objective

- To Study and acquire knowledge on various basic machining operations in special machines and its applications in real life manufacture of components in the industry

S.No	Description of the experiments
	LIST OF EXPERIMENTS
1	Contour milling using vertical milling machine.
2	Spur gear cutting in milling machine.
3	Helical Gear Cutting in milling machine.
4	Gear generation in gear hobbing machine.
5	Gear generation in shaping machine.
6	Gear generation in slotter machine.
7	Cylindrical grinding.
8	Tool angle grinding with tool and Cutter Grinder.
9	Measurement of cutting forces in Milling / Turning Process / cycle time estimation.
10	Surface machining in Planner machine.
11	CNC Part Programming.
	Total Instructional Hours **45**

Course Outcome

CO1: Ability to use different machine tools to manufacturing gears.
CO2: Ability to use different machine tools for finishing operations.
CO3: Ability to manufacture tools using cutter grinder.
CO4: Develop CNC part programming for the simple components.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME4002	THERMAL ENGINEERING LAB - I	0	0	4	2

Course Objective

1. To study the valve timing and port timing diagram.
2. To understand the basic concepts and working of IC engines.
3. To study the characteristics of fuels/Lubricants used in I C engines.
4. To learn the principle of emission measurement using Orsat apparatus.
5. To study the Performance of steam generator/turbines.

Expt. No.	Description of the Experiments
1.	Valve Timing and Port Timing diagrams.
2.	Performance Test on 4 – stroke Diesel Engine.
3.	Heat Balance Test on 4 – stroke Diesel Engine.
4.	Morse Test on Multi-cylinder Petrol Engine.
5.	Retardation Test on a Diesel Engine.
6.	Determination of Flash Point and Fire Point of various fuels / lubricants.
7.	Determination of calorific value of various fuels.
8.	Determination of viscosity of fuels.
9.	Performance test on reciprocating air compressor.
10.	Performance test on centrifugal blower.
11.	Determination of exhaust gas composition by Orsat apparatus.

Total Practical Hours **45**

Course Outcome

Upon completion of the course, the students will be able to

CO1: Demonstrate the principles of spark ignition and compression ignition engines.

CO2: Determine various performance parameters of Internal Combustion Engines.

CO3: Determine the performance of air compressors.

CO4: Compute the properties of fuels and lubricating oils.

CO5: Estimate the emission levels of fuels using Orsat apparatus.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME4701	COMMUNICATION SKILLS LAB (ECE, MECH & B.Tech. IT)	0	0	2	1

Course Objective

1. Enable learners to understand different genres of oral presentation.
2. Empower the student to improve their ability to speak in formal forum without hesitation.
3. Make the students to read, interpret and analyze different types of writings.

Expt. No.	Description of the Experiments
1.	Listening to lectures, discussions, talk shows and news programmes.
2.	Watching videos on interesting events and interpreting it
3.	Conversational skills (formal and informal)
4.	Group discussion
5.	Interview skills
6.	Making presentations
7.	Reading different genres of texts ranging from newspapers to philosophical treatises
8.	Reading strategies such as graphic organizers, summarizing and interpretation
9.	Writing job applications – cover letter – resume
10.	Writing reports & Writing for publications.
11.	Intercultural communication
12.	Creative and critical thinking.

Total Practical Hours 45

Course Outcome

CO1- It enables learners to understand different genres of oral presentation.
CO2- Empowered the student to improve their ability to speak in formal forum without Hesitation.
CO3- Students read, interpret and analyze different types of writings.
CO4- Enhances the performance of students on formal writing.
CO5-Equips the learners in practicing better soft skills.

REFERENCE BOOKS:

R2 - Prakash, P,Verbal and Non-Verbal Reasoning, Macmillan India Ltd., Second Edition, New Delhi, 2004.
R3 - John Seely, The Oxford Guide to Writing and Speaking, Oxford University Press, New Delhi, 2004.

TEACHING METHODS:

1. To be totally learner-centric with minimum teacher intervention as the course revolves around practice.
2. Suitable audio/video samples from Podcast/YouTube to be used for illustrative purposes.
3. Portfolio approach for writing to be followed. Learners are to be encouraged to blog, tweet, text and email employing appropriate language.
4. GD/Interview/Role Play/Debate could be conducted off the laboratory (in a regular classroom) but learners are to be exposed to telephonic interview and video conferencing.
5. Learners are to be assigned to read/write/listen/view materials outside the classroom as well for graining proficiency and better participation in the class.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME5201	CAD / CAM	3	0	0	3

Course Objective

1. To learn the basics of computer based modelling.
2. To Study important methods of principles of modeling features.
3. To Gain knowledge in CNC machine tools and part programming.
4. To develop process planning techniques and product data management.
5. To learn about integrated manufacturing systems.

Unit	Description	Instructional Hours
I	**PRODUCT CYCLE AND COMPUTER GRAPHICS** Design process-Product development cycle-Sequential engineering-Concurrent engineering-Evolution of CAD/CAM and CIM, Graphic Primitives-Point plotting-Drawing of lines-Bresenham's circle algorithm-View port-2D and 3D transformations- Clipping.	9
II	**GEOMETRIC MODELING TECHNIQUES** CAD process, Wireframe modeling- Surface modeling-Representation of curves and surfaces-Hermite, Bezier, B-Spline and Rational curve- Types of surfaces- Solid modeling, Drawing utilities-entities-blocks-display-hatching-pattern-dimensioning-enquiry-plotting-Customisation-file interchange-office management- Data transfer. Assembly, Drafting and mechanism.	9
III	**CNC MACHINE TOOLS** NC machine principles-Types of CNC machines-Features of CNC systems-Programming Features-Diagnostic Features-DNC and its Integration-Controllers-Technology and Procedure of CAM-Additive Manufacturing.	9
IV	**COMPUTER AIDED MANUFACTURING SYSTEMS** Process planning-computer aided process planning-Group technology-Part families-classification and coding-production flow analysis-Cellular manufacturing systems-Flexible manufacturing systems.	9
V	**COMPUTER INTEGRATED MANUFACTURING** CIM as a concept and a technology, Benefits of CIM, Product data management-Master production schedule-Material and capacity Requirement Planning, Production planning and control, Shop floor control -Inventory Management, Manufacturing resource planning.	9
	Total Instructional Hours	**45**

Course Outcome

Upon completion of the course Student will be able to:

CO1: Understand the mathematics behind 2D and 3D CAD models.

CO2: Learn, interpret and analyze different types of modeling techniques.

CO3: Prepare CNC programs and understand the CNC systems.

CO4: Apply computer aided process planning techniques.

CO5: Obtain knowledge of product data management.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME5202	HEAT AND MASS TRANSFER	3	0	0	3

Course Objective

1. To study the various modes of heat transfer and its applications.
2. To study about free and forced convection for various applications.
3. To learn about condensation, boiling, and basic design of heat exchange using LMTD, NTU methods.
4. To acquire knowledge about radiation laws and gas radiation.
5. To study about basic concepts of mass transfer.

Unit	Description	Instructional Hours
I	**CONDUCTION** General Differential equation of Heat Conduction– Cartesian and Polar Coordinates – One Dimensional Steady State Heat Conduction – plain and Composite Systems- Calculation of thermal conductivity of composite materials– Conduction with Internal Heat Generation – Extended Surfaces – Unsteady Heat Conduction – Lumped Analysis –Semi Infinite and Infinite Solids –Use of Heisler's charts.	9
II	**CONVECTION** Free and Forced Convection - Hydrodynamic and Thermal Boundary Layer. Free and Forced Convection during external flow over Plates and Cylinders and Internal flow through tubes.	9
III	**PHASE CHANGE HEAT TRANSFER AND HEAT EXCHANGERS** Nusselt's theory of condensation - Regimes of Pool boiling and Flow boiling. Correlations in boiling and condensation. Heat Exchanger Types - Overall Heat Transfer Coefficient Fouling Factors –Analysis of heat exchanger using LMTD – NTU method.	9
IV	**RADIATION** Basic Concepts, Laws of Radiation – Black Body Radiation – Grey body radiation –radiation shield - Shape Factor (parallel Plates, parallel circular disc) – Gas radiations (basics study).	9
V	**MASS TRANSFER** Basic Concepts – Diffusion Mass Transfer – Flick's Law of Diffusion – Steady state Molecular Diffusion– Convective Mass Transfer – Momentum, Heat and Mass Transfer Analogy – Convective Mass Transfer Correlations.	9
	Total Instructional Hours	**45**

Course Outcome

Students will be able to:

CO1: Apply conduction heat transfer concepts in the engineering applications.
CO2: Analyze convection heat transfer problems for free and forced mode.
CO3: Design and select heat exchangers, condensers and evaporator for various engineering applications
CO4: understand and apply the concepts of Black Body Radiation and Grey body radiation.
CO5: Apply the knowledge on mass transfer.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME5203	DYNAMICS OF MACHINES	3	0	0	3

Course Objective

1. To study the method of static force analysis and dynamic force analysis of mechanisms and flywheel.
2. To study the undesirable effects of unbalances in rotors and engines.
3. To learn the concept of natural vibratory systems and their analysis.
4. To learn the concept of forced vibratory systems and their analysis.
5. To know principles of governors and gyroscopes.

Unit	Description	Instructional Hours
I	**FORCE ANALYSIS AND FLYWHEELS** Static force analysis of mechanisms – D Alembert's principle - Inertia force and Inertia torque – Dynamic force analysis - Dynamic Analysis in Reciprocating Engines – Gas Forces – Equivalent masses - Bearing loads - Crank shaft torque – Engine shaking forces. Turning moment diagrams – Fluctuation of energy, speed - Flywheels of engines and punching press.	9
II	**BALANCING** Static and dynamic balancing – Balancing of rotating masses - Balancing of reciprocating masses in a single cylinder engine – Primary and secondary unbalanced forces - Balancing in multi-cylinder engines – Balancing machines.	9
III	**FREE VIBRATION** Basic features of vibratory systems - Basic elements and lumping of parameters - Degrees of freedom - Single degree of freedom - Free vibration - Equations of motion - Natural frequency - Whirling of shafts and critical speed - Torsional vibration of two and three rotor systems, torsionally equivalent shaft. Determination of frequency for various elements.	9
IV	**DAMPED AND FORCED VIBRATIONS** Damped vibration - Types of damping – Logarithmic decrement - Response to periodic forcing - Harmonic Forcing – Forced vibration caused by unbalance - Support motion – Force transmissibility and amplitude transmissibility - Vibration isolation.	9
V	**MECHANISMS FOR CONTROL** Governors - Types - Centrifugal governors – Porter & Proell governor, Hartnell, Hartung – Characteristics - Effect of friction - Controlling Force Gyroscopes - Gyroscopic couple - Gyroscopic stabilization - Gyroscopic effects in airplanes and ships.	9
	Total Instructional Hours	**45**

Course Outcome

Students will be able to:

CO1: Calculate the inertia forces in reciprocating and rotating masses and turning moments in flywheels.
CO2: Balance reciprocating and rotating masses.
CO3: Analyze free vibration systems.
CO4: Determine the frequency of damped forced vibration systems.
CO5: Evaluate the gyroscopic couple and sensitivity of governor.

HiCET

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME5204	DESIGN OF MACHINE ELEMENTS (COMMON TO MECHANICAL AND AUTOMOBILE ENGINEERING)	3	0	0	3

Course Objective

1. To study the design function in mechanical engineering, different steps involved in designing and the relation of design activity with manufacturing activity.
2. To know the different types of failure modes and criteria.
3. To learn the principles involved in evaluating the shape and dimensions of a component to satisfy functional and strength requirements.
4. To gain design knowledge of the different types of elements used in the machine design process, for e.g. Shafts, couplings etc. and will be able to design these elements for each application.
5. To learn to use catalogues and standard machine components

Unit	Description	Instructional Hours
I	**STEADY STRESSES IN MACHINE MEMBERS** Introduction to the design process - factors influencing machine design - calculation of principal stresses for various load combinations, eccentric loading – curved beams – crane hook and 'C' frame - theories of failure – Design based on strength and stiffness – stress concentration.	9
II	**VARIABLE STRESSES IN MACHINE MEMBERS** Variable stresses - Soderberg, Gerber and Goodman methods for combination of stresses and their application in design problems.	8
III	**DESIGN OF SHAFTS AND COUPLINGS** Design of solid & hollow shaft based on strength and rigidity with steady loading subjected to pure torsion. Design of shafts carrying pulleys & gears (Combined loading), Design and drawing of couplings – Rigid and Flexible.	10
IV	**DESIGN OF SPRINGS AND FLYWHEEL** Various types of springs, Design of helical springs and Leaf springs – Design of Flywheel considering stresses in rims and arms for engines and presses.	9
V	**DESIGN OF BEARINGS** Sliding contact and rolling contact bearings - Hydrodynamic journal bearings, Sommerfield Number, Raimondi and Boyd graphs, - Selection of Rolling Contact bearings.	9
	Total Instructional Hours	**45**

Course Outcome

Students will be able to:

CO1 - Demonstrate the use of stress analysis, theories of failure and materials in the design of machine components.

CO2 - Identify proper assumptions with respect to material, factor of safety, static and dynamic loads for various machine components.

CO3 - Design of shafts based on strength and rigidity and couplings.

CO4 - Design springs and considering stresses in flywheel components.

CO5 - Design of Sliding contact and rolling contact bearings.

Dean (Academics)
HiCET

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME5205	AUTOMOBILE ENGINEERING	3	0	0	3

Course Objective

To learn the following

1. The anatomy of the automobile in general.
2. The location and importance of each part.
3. The functioning of the engine and its accessories, gear box, clutch, brakes, steering, axles and wheels.
4. Suspension, frame, springs and other connections.
5. Emissions, ignition, controls, electrical systems and ventilation.

Unit	Description	Instructional Hours
I	**VEHICLE STRUCTURES AND ENGINE** Types of Automobiles - Vehicle Construction, Chassis –Types, Frame and Body – Types. Engine types, Components of Engine – Functions and Materials. Vehicle aerodynamics, Introduction to Electronic Engine Management System.	9
II	**FUEL SUPPLY SYSTEM AND ELECTRICAL SYSTEM** Carburetion and Simple carburetor - Electronically controlled gasoline fuel injection system – Monopoint and MultiPoint Fuel Injection Systems (MPFI). Diesel engine fuel supply system - Types, Electronically controlled diesel fuel injection system – CRDI. General layout of electrical system – Different sub circuits. Construction and operation of Lead Acid battery - Lighting system – Starting motor and drives.	9
III	**TRANSMISSION SYSTEMS** Clutch – Types and Construction, Gear Boxes – Types, Manual and Automatic, Selector mechanism - Over Drives – Transfer Box - Fluid flywheel - Torque converter – Propeller shaft – Slip Joint – Universal Joints – Differential unit. Rear Axle – Hotchkiss drive and Torque Tube drive. Turbocharger and supercharger.	9
IV	**STEERING, BRAKES AND SUSPENSION SYSTEMS** Wheels and Tyres – Wheel alignment parameters, Types of Front axle - Steering geometry and mechanism - Steering gear box and types – Power Steering. Brakes – Types, Hydraulic and Pneumatic braking systems - Construction and working, Antilock Braking System, electronic brake force distribution (EBD) and Traction Control. Suspension systems – Types – Independent suspension systems.	9
V	**ALTERNATE FUELS IN AUTOMOBILES** Properties and applications of Natural Gas, LPG, Biodiesel, Bioethanol, Gasohol, Biogas, Producer gas and Hydrogen in Automobiles, Electric vehicles - Hybrid vehicles - Solar powered vehicles - Fuel Cells. Emission Control & Safety: Global Standards, Indian Pollution norms for Petrol & Diesel vehicles, Safety measures in automobiles.	9
	Total Instructional Hours	**45**

Course Outcome

Student upon completion of the course will be able to:

CO1 - Understand the function of various automobile components and engine parts.
CO2 - Understand the fuel supply systems and electrical systems in automobiles.
CO3 - Understand the working of transmission system and its various elements.
CO4 - know the working of suspension, steering and braking systems.
CO5 - Understand the various alternate fuels that could be used in automobiles.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME5001	CAD / CAM LABORATORY	0	0	4	2

Course Objective

1. To acquire practical experience in using 2D drafting and 3D modeling software.
2. To study the features of CNC Machine Tools.
3. To learn the applications of modern control systems.

S.No	Description of the Experiments	Practical Hours
	I. 3D GEOMETRIC MODELING	
	List of Experiments Creation of 3D assembly model of following machine elements using 3D Modeling software 1. Flange Coupling 2. Screw Jack 3. Universal Joint 4. Connecting rod 5. Lathe Tailstock	24
	II. Manual Part Programming.	
	(i) Part Programming - CNC Turning Centre 6. Step Turning 7. Taper Turning and Circular Interpolation 8. Drilling, Grooving and Thread Cutting	21
	(ii) Part Programming - CNC Machining Centre 9. Milling of a Contour Profile 10. Milling an arc or Circular Profile	
	III. Computer Aided Part Programming a) Demonstration on CL Data and Post process generation using CAM software. ➢ Study and practical demonstration on Coordinate measuring machine. ➢ Study and practical demonstration on Rapid Prototyping Technologies.	
	Total Instructional Hours	**45**

Course Outcome

The Students will be able to
CO1 - Develop 2D drawing and 3D models using modeling software.
CO2 - Understand the CNC control in modern manufacturing system.
CO3 - Prepare CNC part programming and manufacture engineering components.

Chairman - BoS
MECH - HiCET

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME5002	THERMAL ENGINEERING LABORATORY – II	0	0	4	2

Course Objective

To learn the following

1. Determination of thermal conductivity of conduction apparatus.
2. Determination of the heat transfer coefficient of convection apparatus.
3. Calculation of effectiveness of heat exchangers.
4. Determination of emissivity of a grey surface.
5. Performance of air conditioning and refrigeration systems.

Expt. No.	Description of the Experiments	Practical Hours
	HEAT TRANSFER LAB	
1	Thermal conductivity measurement using guarded plate apparatus.	30
2	Thermal conductivity measurement of pipe insulation using lagged pipe apparatus.	
3	Determination of heat transfer coefficient under natural convection from a vertical cylinder.	
4	Determination of heat transfer coefficient under forced convection from a tube.	
5	Determination of Thermal conductivity of composite wall.	
6	Determination of Thermal conductivity of insulating powder.	
7	Heat transfer from pin-fin apparatus.	
8	Determination of Stefan – Boltzmann constant.	
9	Determination of emissivity of a grey surface.	
10	Effectiveness of Parallel / counter flow heat exchanger.	
	REFRIGERATION AND AIR CONDITIONING LAB	
11	Determination of COP of a refrigeration system (Calorimetry test).	15
12	Determination of COP of an air-conditioning system.	
13	Determination of COP of a domestic refrigerator using hydro carbon refrigerants.	
	Total Practical Hours	**45**

Course Outcome

Students will be able to:

CO1: Apply the various modes of heat transfer in thermal systems.

CO2: understand the working principle of refrigeration and air conditioning systems.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME5003	DYNAMICS LAB	0	0	4	2

Course Objective

1. To learn the concepts of generalized forces and the Principle of Virtual Work.
2. To acquire concepts of static and dynamic mass balancing and flywheels.
3. To be aware of the approaches and mathematical models used dynamical analysis of machinery.
4. To learn the applications of measuring devices used for dynamic testing.

Expt. No.	Description of the Experiments
1.	Experimental study of velocity ratio for various types of gear trains – simple and Compound.
2.	To draw the profile of the CAM and to determine the jump speed of the cam.
3.	To perform the static balancing on static balancing machine.
4.	To perform the dynamic balancing on dynamic balancing machine.
5.	To determine the of Moment of Inertia of Round bar by Bifilar Suspension and Compound Pendulum.
6.	To determine the following: a) Natural Frequency of Longitudinal Vibrations of helical spring. b) Transverse Vibrations and Verification of Dunkerley"s Rule.
7.	To determine the Natural Frequency of Torsional Vibrations
8.	To determine the following: a) Critical speed of Shaft. b) Transmissibility Ratio of vibrating table.
9.	To perform experiment on Watt and Porter Governors and draw the performance characteristic Curves, and to find stability & sensitivity.
10.	To perform experiment on Proell Governor and draw the performance characteristic Curves and find stability & sensitivity.
11.	To perform experiment on Hartnell Governors and draw the performance characteristic Curves, and find stability & sensitivity.
12.	To determine the gyroscopic couple on Motorized Gyroscope.
	Total Practical Hours **45**

Course Outcome

Students will be able to:

CO1: Conduct experiments on vibrating bodies for predicting natural frequency.

CO2: Perform experiments on balancing of masses and determine the unbalanced force.

CO3: Determine the characteristic curves for governors and effect of gyroscopic couple.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME6201	FINITE ELEMENT ANALYSIS (COMMON TO MECHANICAL AND AUTOMOBILE ENGINEERING)	3	0	0	3

Course Objective

1. To equip the students with the finite element analysis fundamentals
2. To enable the students to formulate the design problems using Finite Element Analysis
3. To acquire knowledge on solving 2-D structural and thermal problems.
4. To develop proficiency in the application of FEM to realistic axisymmetric engineering problems.
5. To enable the students to solve Isoparametric elements.

Unit	Description	Instructional Hours
I	**INTRODUCTION** Historical background – Matrix approach – Application to the continuum – Discretization – Matrix algebra – Gaussian elimination – Governing equations for continuum – Classical Techniques in FEM– Weighted residual method – Ritz method.	9
II	**ONE DIMENSIONAL PROBLEMS** Finite element modeling –shape functions- Potential energy approach – Galerkin approach – Assembly of stiffness matrix and load vector – General form of finite element equations –linear bar element– Quadratic element –Nodal approximation-Development of shape function-Element matrices and vectors-Extension to plane trusses-Development of element equations-Assembly-Element connectivity-Global equations-Beam elements and one dimensional heat transfer problems.	9
III	**TWO DIMENSIONAL SCALAR VARIABLE PROBLEMS** Introduction – Finite element modeling – Scalar valued problem – Poisson equation –Laplace equation – Triangular elements – Element stiffness matrix – Force vector – Galerkin approach - Stress calculation – Temperature effects-Heat transfer problems-Torsion of non circular shafts.	9
IV	**TWO DIMENSIONAL VECTOR VARIABLE PROBLEMS** Axisymmetric formulation – Element stiffness matrix and force vector – Galerkin approach – Body forces and temperature effects – Stress calculations – Boundary conditions – Applications to cylinders under internal or external pressures.	9
V	**ISOPARAMETRIC FORMULATION** Natural coordinate systems-Isoparametric elements-The four node quadrilateral element– Shape functions for isoparametric elements – Element stiffness matrix and force vector – Lagrangean and serendipity elements – Numerical integration - Stiffness integration – Stress calculations – Four node quadrilateral for axisymmetric problems-Higher order elements.	9
	Total Instructional Hours	**45**

Course Outcome

Students will be able to:

CO1: Formulate the mathematical model for solution of engineering design problems
CO2: Determine the solution for real time 1D structural problems and heat transfer problems.
CO3: Solve heat transfer and structural problems using 2D elements
CO4: Explain the stages in solving engineering problems under axisymmetric condition
CO5: Analyse and solve the real time problems using isoparametric elements

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME6202	METROLOGY AND QUALITY CONTROL	3	0	0	3

Course Objective

1. To study basic principles of measurements.
2. To learn about the various linear & angular measuring equipments.
3. To learn the basics of form measurements.
4. To acquire knowledge on advanced measuring techniques.
5. To learn concepts of control charts for the variables.

Unit	Description	Instructional Hours
I	**BASICS OF METROLOGY** General concept – Generalized measurement system - Units and Standards - Measuring instruments - sensitivity, stability, range, readability, accuracy and precision - static and dynamic response - repeatability - Errors in Measurements, calibration - Introduction to Dimensional and Geometric Toleranceing.	9
II	**LINEAR AND ANGULAR MEASUREMENTS** Linear Measuring Instruments – Vernier, Micrometer, Slip gauges, Comparators -Types, Limit gauges – Tool Makers Microscope. Angular measuring instruments - Sine bar, Sine center, Bevel protractor, Angle Decker & Autocollimator – Applications.	9
III	**FORM MEASUREMENT** Measurement of screw threads: Thread gauges, Floating carriage micrometer - Measurement of gear parameters - Gear tooth vernier caliper method, Constant chord, Base tangent method - Parkinson gear roller tester - Surface finish - Analysis, Measuring Equipments - Straightness Measurement and Roundness measurements.	9
IV	**ADVANCES IN METROLOGY** Basic concept of lasers - Advantages of lasers – Laser Inspection - Laser Interferometers – Types – AC Laser Interferometer, NPL Flatness Interferometer, Michelson Interferometer - Applications. Basic concept of CMM – Types of CMM – Constructional features – Probes – Accessories – Software – Applications – Basic concepts of Machine Vision System – Applications.	9
V	**PROCESS CONTROL FOR VARIABLES** Introduction, definition of quality, basic concept of quality, definition of SQC, benefits and limitation of SQC, Quality assurance, Quality cost-Variation in process- factors – process capability – process capability studies and simple problems – Theory of control chart- uses of control chart – Control chart for variables – X chart, R chart and control chart for variables.	9
	Total Instructional Hours	**45**

Course Outcome

Students will be able to:

CO1: understand the principles of measurements.
CO2: Acquire the knowledge about linear and angular measuring instruments.
CO3: Gain the detailed informations about form measurements.
CO4: know the advance measurement concepts in metrology.
CO5: Apply the control charts for the process control.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME6203	HYDRAULIC AND PNEUMATIC CONTROLS	3	0	0	3

Course Objective

1. To study the physical properties of the hydraulic systems.
2. To learn the operations of pumps, cylinders and the directional control valves.
3. To learn basic properties of the compressed air as medium used in energy transmission for the purpose of control systems.
4. To learn the basic operations and working principles of various pneumatic components and circuits.
5. To be aware of various problems and maintenance of Hydraulic and Pneumatic circuits for various engineering applications.

Unit	Description	Instructional Hours
I	**INTRODUCTION TO FLUID POWER AND HYDRAULIC PUMPS** Introduction to fluid power, Advantages of fluid power, Application of fluid power system. Types of fluid power systems, Properties of hydraulic fluids – Fluid power symbols. Basics of Hydraulics - Applications of Pascal's Law. Pumping theory – Pump classification – Gear pump, Vane Pump, piston pump, construction and working of pumps.	9
II	**HYDRAULIC ACTUATORS AND CONTROL VALVES** Actuators: Linear hydraulic actuators – Types of hydraulic cylinders – Single acting, Double acting, special cylinders like tandem, Rodless, Telescopic, Cushioning mechanism, Construction of double acting cylinder. Control Valves: Direction control valve – 3/2 way valve – 4/2 way valve – Shuttle valve – check valve – pressure control valve – pressure reducing valve, sequence valve, Flow control valve – Fixed and adjustable.	9
III	**DESIGN OF HYDRAULIC SYSTEMS AND INDUSTRIAL APPLICATIONS** Reciprocating circuit, Synchronizing circuit, Regenerative circuit, Pump unloading circuit, Counterbalance valve circuit. Automation solution for any manual applications. Types of accumulators – Accumulators circuits, sizing of accumulators-Intensifier, Fail-safe circuits - Speed control circuits.	9
IV	**PNEUMATIC SYSTEMS AND COMPONENTS** Properties of air – Compressors – Filter, Regulator, Lubricator, and Muffler – Air control valves, Quick exhaust valves, pneumatic actuators. Sequential circuit design for simple applications using cascade method.	9
V	**SERVO SYSTEMS AND MAINTENANCE** Servo systems – Hydro Mechanical servo systems, Electro hydraulic servo systems and proportional valves. Fluidics – Introduction to fluidic devices, simple circuits, Introduction to Electro Hydraulic Pneumatic logic circuits, ladder diagrams, PLC applications in fluid power control. Fluid power circuits; failure and troubleshooting.	9
	Total Instructional Hours	**45**

Course Outcome

Students will be able to:

CO1: Demonstrate the applicability of fluid power systems for engineering applications.
CO2: Design customized circuits in hydraulics, pneumatics and servo systems for various industrial needs.
CO3: Draw and explain the working of various types of pumps and hydraulic motors and cylinders.
CO4: Explain the fundamentals of pneumatic systems and working of pneumatic components.
CO5: Draw ladder logic diagrams and explain about low cost automation.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME6204	DESIGN OF TRANSMISSION SYSTEMS	3	0	0	3

Course Objective

1. To acquire knowledge for the selection of various flexible elements like belt and chain drives.
2. To study design and analysis of parallel and non-intersecting type of gear drives.
3. To impart knowledge on design and analysis of non-parallel and intersecting type of gear drives.
4. To acquire the knowledge on design of gear boxes.
5. To learn an overview of the design of transmission elements like brakes and clutches.

Unit	Description	Instructional Hours
I	**DESIGN OF FLEXIBLE ELEMENTS** Selection of V belts and pulleys-selection of Flat belts and pulleys-Wire ropes and pulleys – Selection of Transmission chains and Sprockets. Design of pulleys and sprockets. Case studies on design of material handling systems.	9
II	**DESIGN OF SPUR GEARS AND HELICAL GEARS** Gear Terminology-Force analysis -Tooth stresses - Dynamic effects - Fatigue strength – Factor of safety - Gear materials – Module and Face width-power rating calculations based on strength and wear considerations - Helical Gears – Pressure angle in the normal and transverse plane- Equivalent number of teeth-forces and stresses.	9
III	**DESIGN OF BEVEL AND WORM GEARS** Straight bevel gear: Tooth terminology, tooth forces and stresses, equivalent number of teeth. Estimating the dimensions of pair of straight bevel gears. Worm Gear: terminology, Merits and demerits.	9
IV	**DESIGN OF GEAR BOXES** Geometric progression - Standard step ratio - Ray diagram, kinematics layout -Design of sliding mesh gear box - Constant mesh gear box. – Design of multi speed gear box.	9
V	**DESIGN OF CLUTCHES AND BRAKES** Design of plate clutches, cone clutches – jaw clutches - internal expanding brakes. Design of shoe and band Brakes.	9
	Total Instructional Hours	**45**

Course Outcome

Students will be able to:

CO1: Select the appropriate flexible elements in power transmission systems.
CO2: Design spur and helical gear drives employed in transmission systems.
CO3: Design Bevel and Worm gear drives employed in transmission systems.
CO4: Design single and multispeed gear box.
CO5: Design brakes and clutches.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME6001	SIMULATION AND ANALYSIS LAB	0	0	4	2

Course Objective

1. To develop the student's skills in proper modeling, meshing, and setting up material properties, loads, and constraints for computer simulation and analysis.
2. To expose the students to different applications of simulation and analysis tools and then solve the problem using software packages.
3. To provide the student with some knowledge in multi-physics analysis –interaction between structure and thermal.

LIST OF EXPERIMENTS

Expt. No.	Description of the Experiments
A	**Analysis (Using Software)**
1.	Stress analysis of beams.
2.	Stress analysis of a plate with a circular hole.
3.	Stress analysis of rectangular L – bracket.
4.	Stress analysis of an axi-symmetric component.
5.	Modal analysis of beams.
6.	Modal analysis of a 2D component.
7.	Harmonic analysis of a 2D component.
8.	Thermal stress analysis of a 2D component.
9.	Conductive heat transfer analysis of a 2D component.
10.	Convective heat transfer analysis of a 2D component.
B	**Simulation basics** ➢ Simulation of air conditioning system with condenser temperature and evaporator temperatures as input to get COP. ➢ Simulation of Hydraulic / Pneumatic cylinder. ➢ Simulation of cam and follower mechanism.
	Total Instructional Hours **45**

Course Outcome

Students will be able to:

C01: Determine engineering design problem that involves interaction between heat and stress, generate the model using a proper element type, and then solve the problem.

C02: Solve linear and non-linear structural, thermal, and flow problems using software packages.

C03: Analyze and display the results such as von-Mises stress, displacement, temperature, pressure, and velocity etc. obtained from computer analysis.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME6002	METROLOGY LAB	0	0	4	2

Course Objective

1. To learn the basics of metrology & quality control.
2. To study the applications of different measuring instruments and use them in industry for quality inspection.
3. To learn the basic concepts of accuracy, error, and calibration.

Expt. No.	Description of the Experiments
1.	Calibration of Vernier Caliper.
2.	Calibration of Micrometer.
3.	Measurement of Gear tooth parameters using Gear Tooth Vernier.
4.	Measurement of Taper Angle using sine bar.
5.	Checking the limits of dimensional tolerances using mechanical comparators.
6.	Measurement of dimensions by using Vernier Height Gauge.
7.	Measurement of straightness and flatness by using auto collimator.
8.	Measurement of Screw thread parameters by using Profile Projector.
9.	Measurement of dimensions for a threaded specimen using Tool makers Microscope.
10.	Measurement of thread parameters using floating carriage micrometer.
11.	Measurement of Temperature using Thermocouple.
12.	Measurement of Force using load cell.
13.	Measurement of Torque.
14.	Study of Coordinate Measuring Machine.

Total Practical Hours **45**

Course Outcome

Students will be able to:

CO1: Understand the calibration of various measuring instruments.

CO2: Analyze the surface characteristics of components.

CO3: Examine the various profiles of the components.

HiCET

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME6003	DESIGN AND FABRICATION PROJECT	0	0	4	2

Course Objective

1. To develop skills to formulate a technical project.
2. To give guidance on the various tasks of the project and standard procedures.
3. To teach use of new tools, algorithms and techniques required to carry out the projects.
4. To get hands on training in the fabrication of one or more components of a complete working models.
5. To train the students in preparing project reports and to face reviews and viva voce examination.

GUIDELINE FOR REVIEW AND EVALUATION

The students may be grouped into 2 to 4 and work under a project supervisor. The device/system/component to be fabricated may be decided in consultation with the supervisor and if possible with an industry. A project report to be submitted by the group and the fabricated model, which will be reviewed and evaluated for internal assessment by a Committee constituted by the Head of the Department. At the end of the semester examination the project work is evaluated based on oral presentation and the project report jointly by external and internal examiners constituted by the Head of the Department.

Total Practical Hours 60

Course Outcome

Students will be able to:

CO1: Identify the requirement and develop the design solutions.
CO2: Identify technical ideas, strategies and methodologies.
CO3: Utilize the new tools, algorithms, techniques that contribute to obtain the solution of the project.
CO4: Take up any challenging practical problems and find solution by formulating proper methodology.
CO5: Fabricate any components using different manufacturing tools.

ELECTIVES - I

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME5301	ADVANCED FOUNDRY TECHNOLOGY	3	0	0	3

Course Objective

To learn the following

1. To develop problem solving skills among students in various foundry technologies.
2. To promote understanding of basic facts and concepts in foundry process while retaining the excitement of foundry industry.
3. To make students capable of studying foundry technology in academic and Industrial courses.
4. To expose and to develop interest in the fields of foundry concepts like investment castings, shell moulding, die castings, etc.
5. To study about testing and quality assurance in foundry.

Unit	Description	Instructional Hours
I	**SPECIAL MOULDING AND CASTING PROCESSES** Moulding processes with permanent moulds, Die casting processes, basic features of die design, equipment description, selection, pressure die casting, gravity die casting, cast products, protection of dies. Centrifugal casting processes – Description of true and semi centrifugal casting products and specific application areas, Centrifuging. Shell moulding, Investment casting and other precision casting processes.	9
II	**MELTING AND POURING PRACTICE** Classification of melting furnaces used in Foundry, Selection of melting furnaces, essential features of a melting furnace, Refractory materials – types, properties and application. Cupola melting - Cupola furnace: types of cupola- divided blast, hot blast, oil fired, coke less etc., brief description of design, operation and quality control aspects, charge calculation. Furnaces heated by electricity - Resistance, Arc and Induction furnaces various types, brief description and application and merits of each. Influence of melting and pouring practice on casting quality, shop floor tests for quality assurance. Solidification: Nucleation and growth.	9
III	**PRODUCTION PRACTICE FOR FERROUS AND NON-FERROUS METALS** Important aspects of foundry practice for castings of Cast irons – grey, malleable and ductile irons, modularizing treatment. Steel foundry practice, practice and quality control in moulding, melting and pouring for production of carbon and alloy steel castings, High – manganese and Stainless steel castings, finishing operations and safety aspects. Foundry practice for copper and aluminum alloys, melting and pouring practice, degassing and dross removal, precautions required.	9
IV	**CAST METALS TECHNOLOGY** Solidification of pure metal and alloys. Basic concepts of structure of pure metals, cast metals and alloys, hardness and tensile properties. Cast Irons - types, forms of graphite in cast irons, Alloy Cast irons-effect of alloying elements on properties, applications of Cast Iron. Cast steels- plain carbon and alloy steels – properties and applications. Properties and applications of important cast non-ferrous alloys.	9
V	**TESTING AND QUALITY ASSURANCE IN FOUNDRY** Cleaning of castings: knockout, fettling, shot blasting and grinding of casting components. Hardness tests and Tensile tests of castings, Non-destructive tests of castings. Casting defects: Causes and remedial measures.	9
	Total Instructional Hours	**45**

Course Outcome

Student upon completion of the course shall be able to:

CO1: Solidification process for different metals.
CO2: Construct structure properties relationship for pure metals.
CO3: Design riser and getting system for castings of different shapes.
CO4: Explain the Investment casting, Shell moulding and Die casting processes in steel manufacturing.
CO5: Improve theoretical knowledge in casting process.

TEXT BOOKS:

T1: Principal of metal casting by Richard W.Heine , Carl R Hoper, Philip C. Rosenthal, Tata McGraw Hill.
T2: Principal of foundry technology by P. L. Jain , Tata McGraw Hill
T3: Foundry practice by W.H. Salmon

REFERENCE BOOKS:

R1: Materials and processes in manufacturing by E. P. degnamo, McMillan publishing
R2: Production technology by P. C. Sharma, S. Chand and Co.
R3: American Standard of metals (ASM) (Vol. 1-14)

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME5302	METAL FORMING PROCESSES	3	0	0	3

Course Objective

1. Understand the basics principles of metal behavior.
2. Gain knowledge about forging process.
3. To study the Rolling process.
4. To impart the knowledge of various Extrusion process.
5. To learn the drawing process.

Unit	Description	Instructional Hours
	INTRODUCTION TO METAL FORMING	
I	Metallurgical aspects of metal forming, , slip, twinning mechanics of plastic deformation, effects of temperature, strain rate, microstructure and friction in metal forming-yield criteria and their significance, Classification of Metal Forming Processes, Advantages and Limitations, Stress strain relations in elastic and plastic deformation, concept of flow stresses, deformation mechanisms, Hot and Cold Working Processes and Its Effect on Mechanical Properties.	9
	FORGING	
II	Introduction and Classification, operation and principle of Forging Processes and Equipment, Methods of forging, Open and Close Die Forging Processes, Defects, Structure and Properties of Forged Products. Force Analysis in forging. Other Related Processes like Cold Heading, Rotary Swaging, Sizing, Coining, Embossing and Roll Forging.	9
	ROLLING	
III	Introduction and Classification, Types of Rolling Mills, Forces and Geometrical Relationships in Rolling, Calculation of Rolling Load, Roll Pass Design, Defects in Rolled Products. Other Related Processes like Roll Piercing, Ring Rolling, Pipe and tube production by rolling processes.	9
	EXTRUSION	
IV	Introduction and Classification, Extrusion Equipment, Forces in extrusion, Analysis of Extrusion Process, Extrusion of components including Seamless Pipes and Tubes. Extrusion of pipes by cold working, Other Related Processes like Impact Extrusion, Hydrostatic Extrusion, Piercing, Drawing, cupping and bending.	9
	DRAWING	
V	Introduction and Classification, Wire Drawing, Rod Drawing, Tube Drawing, Deep Drawing, Analysis of Wire Drawing Process and Load Calculations.	9
	Total Instructional Hours	**45**

Course Outcome

Students will be able to:

CO1: Understand the various metal behaviors.
CO2: Know the forging process and equipments.
CO3: Gain knowledge about Rolling mills and types.
CO4: Impart the knowledge about extrusion process.
CO5: Understand the drawing process.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME5303	UNCONVENTIONAL MACHINING PROCESSES	3	0	0	3

Course Objective

1. To learn about various unconventional machining processes.
2. To know the various mechanical energy based process parameters and their influence on performance and their applications.
3. To understand the electrical energy based machining processes.
4. To know the chemical energy based metal removal processes.
5. To learn about thermal energy used in machining processes.

Unit	Description	Instructional Hours
I	**INTRODUCTION** Traditional machining process - Need for non-traditional machining – classification on the base of energy sources - Brief overview.	6
II	**MECHANICAL ENERGY BASED PROCESSES** Abrasive Jet Machining – Water Jet Machining – Abrasive Water Jet Machining - Ultrasonic Machining. (AJM, WJM, AWJM and USM). Working Principles – equipment used – Process parameters – MRR- Applications.	9
III	**ELECTRICAL ENERGY BASED PROCESSES** Electric Discharge Machining (EDM) - working Principle-equipments-Process Parameters-Surface Finish and MRR- electrode / Tool – Power and control Circuits-Tool Wear – Dielectric – Flushing – Wire cut EDM – Applications.	9
IV	**CHEMICAL AND ELECTRO-CHEMICAL ENERGY BASED PROCESSES** Chemical machining and Electro-Chemical machining (CHM and ECM)-Etchants – Maskant techniques of applying Maskants - Process Parameters – Surface finish and MRR-Applications. Principles of ECM- equipments-Surface Roughness and MRR Electrical circuit-Process Parameters ECG and ECH - Applications.	11
V	**THERMAL ENERGY BASED PROCESSES** Laser Beam machining and drilling (LBM), Oxyfuel cutting, (Plasma Arc machining (PAM) and Electron Beam Machining (EBM). Principles – Equipment –Types - Beam control techniques-Applications. **VISUAL STUDY:** Basics of thermal cutting process-Sample product manufacturing process.	10
	Total Instructional Hours	**45**

Course Outcome

Students will be able to:

CO1: Upon completion of this course Demonstrate different unconventional machining processes.
CO2: Identify the influence of difference process parameters and their applications.
CO3: know the mechanical energy based process.
CO4: Gain knowledge about chemical energy processes.
CO5: Understand thermal energy based manufacturing processes.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME5304	CNC TECHNOLOGY	3	0	0	3

Course Objective

1. To impart knowledge in CNC machine tool building.
2. To design Tooling and work holding devices.
3. Learn numerical control techniques and functions.
4. Generation of CNC codes using CAM software.
5. Develop part programming skills.

Unit	Description	Instructional Hours
	CNC MACHINE TOOLS	
I	CNC Systems-machine control-Interpolations and components. Machining and Turning centres, CNC drilling, milling and grinding machines.	9
	CNC CONSTRUCTIONAL FEATURES	
II	Spindle drives-Transmission belting-Axes feed drives-Sideways-Accessories of Machining and Turning centres. Tools-Tool holders-Tool planning-work holding-fixtures.	9
	AUTOMATION	
III	Direct numerical control-Flexible manufacturing cells and systems-Integration of manufacturing systems-Tools for manufacturing-Functions of a computer integrated manufacturing.	9
	MANUAL PART PROGRAMMING	
IV	Nomenclature – CNC machines, block format-preparatory functions- fixed canned cycles-miscellaneous function- tool offset- tool nose radius compensation-Datum setting-Programs on Turning and Milling	9
	COMPUTER AIDED PART PROGRAMMING	
V	Languages for computer aided part programming-Geometric statements in APT-Point To Point Programming-Programming a tool path-Post processor statements.	9
	Total Instructional Hours	**45**

Course Outcome

Students will be able to:

CO1: Estimate the parameters of metal cutting and understand the components of CNC system.
CO2: Choose the appropriate drives and controls for CNC machines.
CO3: Develop Flexible manufacturing cells and systems.
CO4: Part Programming for various machining process Select.
CO5: Compute operation and maintenance cost of CNC machines.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME5305	ADVANCED WELDING TECHNOLOGY	3	0	0	3

Course Objective

1. To develop basic skill in welding technologies.
2. To develop the special processes which require competency & certification to perform the job activity.
3. Identify some common hazards in welding.
4. Explain and identify proper personal protection used in welding.
5. Explain safety techniques for storing and handling cylinders.

UNIT	DESCRIPTION	Instructional Hours
I	**INTRODUCTION** Welding as compared with other fabrication processes, Importance and application of welding, classification of welding processes, Health & safety measures in welding. **Welding Power Sources:** Physics of welding Arc, Basic characteristics of power sources for various arc welding processes, Transformer, rectifier and generators. **Physics of Welding Arc:** Welding arc, arc initiation, voltage distribution along the arc, arc characteristics, arc efficiency, heat generation at cathode and anode, Effect of shielding gas on arc, isotherms of arcs and arc blow. **Metal Transfer:** Mechanism and types of metal transfer in various arc welding processes.	9
II	**WELDING PROCESSES** Manual Metal Arc Welding (MMAW), TIG, MIG, Plasma Arc, Submerged Arc Welding, Electro gas and Electro slag, Flux Cored Arc Welding, Resistance welding, Friction welding, Brazing, Soldering and Braze welding processes, Laser beam welding, Electron beam welding, Ultrasonic welding, Explosive welding, Friction Stir Welding, Underwater welding & Microwave welding.	9
III	**HEAT FLOW WELDING** Calculation of peak temperature; Width of Heat Affected Zone (HAZ); cooling rate and solidification rates; weld thermal cycles; residual stresses and their measurement; weld distortion and its prevention	9
IV	**REPAIR & MAINTENANCE WELDING** Hard facing, Cladding, Surfacing, Metalizing processes and Reclamation welding **Weldability:** Effects of alloying elements on weld ability, welding of plain carbon steel, Cast Iron and aluminum. Micro & Macro structures in welding.	9
V	**WELD DESIGN** Types of welds & joints, Joint Design, Welding Symbols, weld defects, Inspection/testing of welds, Introduction to Welding Procedure Specification & Procedure Qualification Record.	9
	Total Instructional Hours	**45**

Course Outcome

Student upon completion of the course shall be able to:

CO1: Improve Knowledge in advanced welding technology.
CO2: Select and operate tools and equipment to support welding and related activities.
CO3: Read and interpret basic blueprints and welding symbols to fabricate components.
CO4: Perform Gas Metal Arc Welding to industry standards.
CO5: Perform Gas Tungsten Arc Welding to industry standards and pass the AWS Aluminum Aerospace Certification.

TEXT BOOKS:

T1: Welding Engineering and Technology – R. S. Parmar, M/s. Khanna Publishers, 2-B Nath Market, Nai Sarak, Delhi – 6.
T2: Welding Handbook, American Welding Society, Section-II: Gas Arc and Resistance.

ELECTIVE – II

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME6301	REFRIGERATION AND AIR CONDITIONING	3	0	0	3

Course Objective

1. To learn the working principle of Refrigeration & Air conditioning systems.
2. To recognize various components and accessories of refrigeration systems.
3. To understand the applications of refrigeration and air conditioning systems.
4. To become familiarize with refrigeration and air conditioning cooling load calculations.
5. To provide knowledge on design and selection of Air conditioning systems.

Unit	Description	Instructional Hours
I	**VAPOUR COMPRESSION REFRIGERATION SYSTEM** Introduction to Refrigeration: Ton of refrigeration and C.O.P. Vapor compression cycle: p-h and T-s diagrams, deviations from theoretical cycle, sub cooling and super heating, wet and dry compression, effects of system operating pressures, multi-evaporators systems, multi-expansion systems, two stage systems, cascade systems, auto-cascade systems. Refrigerants: classification, designation and nomenclature.	9
II	**SYSTEM COMPOENENTS CONTROLS AND ACCESSORIES** System components: compressors, condensers, expansion devices and evaporators- types and its working principle. Refrigerant controls: pressure, temperature and refrigerant flow and humidity sensors, actuators & safety controls.etc. Electrical controls: relay, over load protectors, capacitors etc. Accessories: liquid receiver, flash chamber, accumulator, refrigerant driers etc.	9
III	**OTHER REFRIGERATION CYCLES AND APPLICATIONS** Other refrigeration cycles: Vapour absorption, adsorption, steam jet, ejector and thermoelectric refrigeration systems. Magnetic – Vortex and Pulse tube refrigeration systems. Air craft refrigeration cycles. Applications: Refrigeration applications such as milk chilling plant, ice plants, cold storage, food processing plants etc. Air conditioning: space cooling and heating.	9
IV	**COOLING LOAD CALCULATIONS** Refrigeration load calculations: Heat gain through the walls, infiltration load, product load. Air conditioning loads: Outside and inside design conditions; Heat transfer through structure, Solar radiation, Electrical appliances, Infiltration and ventilation, internal heat load; Apparatus selection; fresh air load, effective temperature & chart, calculation of summer & winter air conditioning load.	9
V	**DESIGN AND SELECTION OF AIR CONDITIONING SYSTEMS** Types of air conditioning systems: All air systems, all water systems, Air-water systems, unitary systems. Air distribution: factors considered in air distribution, types of air distribution, Indoor air quality and human comfort. Sizing of ducts: Classification of air conditioning ducts, duct design methods.	9
	Total Instructional Hours	**45**

Course Outcome

Upon completion of this course, The Students will be able to:

CO1: Understand the working principle of various refrigeration cycles.
CO2: Identify the system components and its functions.
CO3: Understand the applications of refrigeration and air conditioning systems.
CO4: Calculate cooling load for an air conditioning buildings.
CO5: Design and selection of air conditioning systems.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME6302	ADVANCED I.C ENGINES	3	0	0	3

Course Objective

1. To understand the combustion phenomena in IC engines.
2. To learn the knocking tendency in SI and CI engines.
3. To understand the significance of alternative fuels and their feasibility.
4. To update the knowledge in engine exhaust emission control.
5. To enable the students to understand the recent developments in IC Engines.

Unit	Description	Instructional Hours
I	**SPARK IGNITION ENGINES** Mixture requirements – Fuel injection systems – Monopoint, Multipoint & Direct injection - Stages of combustion – Normal and Abnormal combustion – Knock - Factors affecting knock – Combustion chambers.	9
II	**COMPRESSION IGNITION ENGINES** Diesel Fuel Injection Systems - Stages of combustion – Knocking – Factors affecting knock – Direct and Indirect injection systems – Combustion chambers – Fuel Spray behavior – Spray structure and spray penetration – Air motion - Introduction to Turbo charging.	9
III	**POLLUTANT FORMATION AND CONTROL** Pollutant – Sources – Formation of Carbon Monoxide, Unburned hydrocarbon, Oxides of Nitrogen, Smoke and Particulate matter – Methods of controlling Emissions – Catalytic converters, Selective Catalytic Reduction – Particulate Traps – Emission norms.	9
IV	**ALTERNATIVE FUELS** Alcohol, Hydrogen, Compressed Natural Gas, Liquefied Petroleum Gas and Bio Diesel - Properties, Suitability, Merits and Demerits - Engine Modifications.	9
V	**RECENT TRENDS** Air assisted Combustion, Homogeneous charge compression ignition engines – Variable Geometry turbochargers – Common Rail Direct Injection Systems - Hybrid Electric Vehicles – Solar Assisted Vehicle.	9
	Total Instructional Hours	**45**

Course Outcome

Upon completion of the course, the students will be able to

CO1: Determine the performance and combustion characteristics of SI and CI engines.
CO2: Identify the usage of alternative fuels for IC engines.
CO3: Acquire knowledge on recent trends in IC engines.
CO4: Explain the abnormalities of internal combustion engines and its identification.
CO5: Acquire knowledge on engine pollution and emission norms.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME6303	DESIGN OF HEAT EXCHANGERS	3	0	0	3

Course Objective

1. To expose the students about the classification of heat exchangers and its applications.
2. To know the factors considered for design of heat exchangers.
3. To develop the student skill to quickly evaluate the size and main parameters of Shell and Tube heat exchangers.
4. To impart the knowledge about phase changes and special application to Condensers and Evaporators.
5. To enable the students to design heat exchanger.

Unit	Description	Instructional Hours
I	**INTRODUCTION TO HEAT EXCHANGERS** Classification of heat exchangers: regenerators, recuperators, mixtures. Heat transfer laws used for design of heat exchangers. Factors considered in heat exchanger analysis: heat transfer coefficients, wall conductive resistance, fouling resistance, overall heat transfer coefficient. TEMA standards, selection criteria for different types of shells and front and rear head ends, geometrical characteristics of TEMA heat exchangers.	9
II	**DESIGN OF PROCESS HEAT EXCHANGERS** Heat transfer correlations used for predicting the heat transfer coefficients. Design methods: LMTD and NTU method of heat exchanger analysis. Design of finned tube air cooled heat exchangers, shell and tube heat exchangers, tube-in-tube heat exchangers, compact heat exchangers, plate heat exchangers and geothermal heat exchangers. Calculations: Fouling factor, pressure drop.	9
III	**DESIGN OF COOLING TOWERS** Types of cooling towers, design procedures, tower characteristics, factors influencing the tower performance, Energy savings in cooling towers, water treatment, site selection for installation, selection fans and pumps.	9
IV	**DESIGN OF CONDENSERS AND EVAPORATORS** Condensers: types of condensers, factors considered in design of air cooled condensers, correlations used for heat exchanger design, water cooled condensers and evaporative condensers. Evaporators: types of evaporators, factors considered in design of evaporators of different configurations.	9
V	**DESIGN OF SOLAR COLLECTORS AND HEAT PIPES** Solar collectors: types of solar collectors, factors considered in design of solar air heaters, solar water heaters and solar stills. Heat pipes: Types of heat pipes, applications of heat pipes, design of heat pipes. Use of Software for design of heat exchangers.	9
	Total Instructional Hours	**45**

Course Outcome

Upon completion of the course, the students will be able to

CO1: Understand the Industrial applications of heat exchangers.
CO2: Design the process heat exchanger.
CO3: Design the cooling towers, condensers, evaporators and solar collectors.
CO4: To perform thermal analysis using LMTD and NTU methods.
CO5: To do thermal design including phase change heat transfer.

TEXT BOOKS:

HiCET

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME6304	GAS DYNAMICS AND JET PROPULSION	3	0	0	3

(Use of Standard Gas Tables permitted)

Course Objective

1. To understand the difference between incompressible and compressible flow.
2. To understand the concept of nozzle and diffuser in flow through variable area duct.
3. To know the concept of fanno flow and Rayleigh flow.
4. To study the phenomenon of shock waves and its effect on flow.
5. To gain knowledge about Jet and Rocket Propulsion.

Unit	Description	Instructional Hours
I	**COMPRESSIBLE FLOW – FUNDAMENTALS** Energy and momentum equations for compressible fluid flows, various regions of flows, reference velocities, stagnation state, velocity of sound, critical states, Mach number, critical Mach number, types of waves, Mach cone, Mach angle, Effect of Mach number on compressibility.	9
II	**FLOW THROUGH VARIABLE AREA DUCT** Isentropicflow through variable area ducts, T-s,h-diagrams for nozzle and diffuser flows, area ratio as a function of Mach number, mass flow rate through nozzles and diffusers, effect of friction in flow through nozzles.	9
III	**FANNO AND RAYLEIGH FLOW** Flow in constant area ducts with friction (Fanno flow) - Fanno curves and Fanno equation, variation of flow properties, variation of Mach number with duct length. Flow in constant area ducts with heat transfer (Rayleigh flow), Rayleigh line and Rayleigh flow equation, variation of flow properties, maximum heat transfer.	9
IV	**NORMAL SHOCK** Governing equations, variation of flow parameters like static pressure, static temperature, density, stagnation pressure and entropy across the normal shock, Prandtl-Meyer equation, impossibility of shock in subsonic flows, flow in convergent and divergent nozzle with shock, flows with oblique shock (elementary treatment only).	9
V	**PROPULSION** Aircraft propulsion- types of jet engines-energy flow through jet engines, study of turbojet engine components-diffuser, compressor, combustion chamber, turbine and exhaust systems, performance of turbojet engines-thrust, thrust power, propulsive and overall efficiencies, thrust augmentation in turbojet engines, ramjet and pulsejet engines. Rocket propulsion –propellants-Theory of rocket propulsion-Performance study-specific impulse -characteristic velocity.	9
	Total Instructional Hours	**45**

Course Outcome

After completion of the course, the students should be able to

CO1: Understand the compressible flow in nozzles and diffusers.
CO2: Solve problems in fanno and Rayleigh flow.
CO3: Evaluate the kinds of shock phenomena while the deviation in flow properties.
CO4: Apply the knowledge of gas turbines for jet propulsion.
CO5: Understand the knowledge about rocket propulsion.

HiCET

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME6305	COMPUTATIONAL FLUID DYNAMICS	3	0	0	3

Course Objective

1. To enable the students to solve one and two-dimensional ordinary and partial differential equations using traditional CFD tools.
2. To teach students how to express derivatives and differential equations through discretization techniques.
3. To help the students to understand the general transformation equations for grid generation.
4. To teach students how to apply explicit, implicit and semi-implicit methods of finite differencing.
5. To help the students solve fluid flow field using some popular CFD techniques.

Unit	Description	Instructional Hours
I	**INTRODUCTION AND GOVERNING EQUATIONS** Introduction - Impact and applications of CFD in diverse fields - Governing equations of fluid dynamics – Continuity - Momentum and energy - Generic integral form for governing equations - Initial and Boundary conditions – Governing equations for boundary layers - Classification of partial differential equations – Hyperbolic – Parabolic - Elliptic and Mixed types - Applications and relevance.	9
II	**DISCRETIZATION** Basic aspects of discretization - Discretization techniques – Finite difference – Finite volume and Finite Element Method– Comparison of discretization by the three methods - Introduction to Finite differences - Transient one-dimensional and two-dimensional conduction – Explicit - Implicit - Crank-Nicolson - ADI scheme – Stability criterion. Difference equations - Numerical errors - Grid independence test - Optimum step size.	9
III	**GRIDGENERATION** Grid generation – General transformation of the equations - Form of the governing equations suitable for CFD – Boundary fitted co-ordinate systems – Elliptic grid generation - Adaptive grids - Modern developments in grid generation.	9
IV	**CONVECTION-DIFFUSION** Steady one-dimensional convection and diffusion - Central difference, upwind, quick, exponential, false diffusion, hybrid and power law schemes. Transient one dimensional heat conduction equation.	9
V	**CALCULATION OF FLOW FIELD** Representation of the pressure - Gradient term and continuity equation – Staggered grid -momentum equations - Pressure and velocity corrections - Pressure Correction equation - Numerical procedure for simple algorithm - Boundary conditions for the pressure correction method.	9
	Total Instructional Hours	**45**

Course Outcome

Students will be able to:

CO1: Possess the knowledge of CFD techniques, basic aspects of discretization and grid generation.
CO2: Create numerical modeling and its role in the field of fluid flow.
CO3: Use the various discretization methods, solution procedures and turbulence modeling to solve the fluid flow problems.
CO4: Solve fluid flow fields using CFD methods.
CO5: To model the fluid flow problems and heat transfer.

OPEN ELECTIVE

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME6401	RAPID PROTOTYPING AND LEAN MANUFACTURING	3	0	0	3

Course Objective

1. To know the principle methods, areas of usage, possibilities and limitations as well as environmental effects of the Rapid Prototyping technologies.
2. To acquire knowledge of solid and liquid based Rapid prototyping system.
3. To provide information about Power based prototyping system.
4. To be familiar with the characteristics of the different materials those are used in lean Manufacturing.
5. To impart knowledge of characteristics and issues of Just in time.

Unit	Description	Instructional Hours
I	**INTRODUCTION** Need - Development of RP systems – RP process chain - Impact of Rapid Prototyping and Tooling on Product Development – Benefits- Applications – Digital prototyping – Virtual prototyping	7
II	**SOLID AND LIQUID BASED RAPID PROTOTYPING SYSTEMS** Stereo lithography Apparatus, Fused deposition Modeling, Laminated object manufacturing, three dimensional printing: Working Principles, details of processes, products, materials, advantages, limitations and applications - Case studies.	10
III	**POWDER BASED RAPID PROTOTYPING SYSTEM** Selective Laser Sintering, Direct Metal Laser Sintering, Three Dimensional Printing, Laser Engineered Net Shaping, Selective Laser Melting, Electron Beam Melting: Processes, materials, products, advantages, applications and limitations – Case Studies.	10
IV	**LEAN MANUFACTURING** Origin of lean production system – Customer focus – Muda (waste) – Standards – 5S system – Total Productive Maintenance – standardized work –Man power reduction – Overall efficiency - Kaizen – Common layouts - Principles of JIT - Jidoka concept – Poka-Yoke (mistake proofing) - Worker Involvement– Quality circle activity – Kaizen training - Suggestion Programmes – Hoshin Planning System (systematic planning methodology) – Lean culture.	9
V	**JUST IN TIME** Characteristics of JIT - Pull method - quality -small lot sizes - work station loads - close supplier ties – flexible work force - line flow strategy - preventive maintenance - Kanban system - strategic implications - implementation issues.	9
	Total Instructional Hours	**45**

Course Outcome

Upon completion of this course, the students can be able to

CO1: Compare different methods and discuss the effects of the Rapid Prototyping technologies.
CO2: Analyse the characteristics of solid and liquid based Rapid prototyping manufacturing.
CO3: Apply the powder based Rapid prototyping manufacturing.
CO4: Execute Lean manufacturing concepts to achieve profit.
CO5: Implement the Just in time technique in industries.

TEXT BOOKS:

T1 Rapid prototyping: Principles and applications, second edition, Chua C.K., Leong K.F., and Lim C.S., World Scientific Publishers, 2003.

T2 Rapid Tooling: Technologies and Industrial Applications, Peter D.Hilton, Hilton/Jacobs, PaulF.Jacobs, CRC press, 2000.

SYLLABUS

ACADEMIC COUNCIL
Chairman
HINDUSTHAN COLLEGE OF ENGG. & TECH.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME7201	ENTREPRENEURSHIP AND BUSINESS CONCEPTS	3	0	0	3

Course Objective

1. Understanding of the scope of an entrepreneur, key areas of development.
2. To motivate the entrepreneurial instinct.
3. To give a clear picture about the process and procedures involved in setting up a small scale Industrial unit or a bigger unit.
4. To develop various businesses related skills of marketing, quality management production, distribution and human resource management etc.
5. To develop and strengthen basic entrepreneurial skills and understanding to run a business efficiently and effectively.

Unit	Description	Instructional Hours
I	**ENTREPRENEURSHIP CONCEPTS** Meaning and concept of entrepreneurship, Role of Entrepreneurship in Economic Development. Factors affecting Entrepreneurship – Creativity, Innovation and Entrepreneurship, Intrapreneurship.	9
II	**ENTREPRENEUR** Definition, Entrepreneurial Motivation, Characteristics of Entrepreneurs, Distinction between an Entrepreneur and a Manager.	9
III	**ENTREPRENEURIAL ECO SYSTEM** Forms of Business Ownership, Sources of Finance, Institutional Support to Entrepreneurs.	9
IV	**BUSINESS PLAN** Objectives of a Business Plan, Business Planning Process, Opportunity Identification and Selection, Contents of a Business Plan, Functional Plans.	9
V	**SMALL BUSINESS MANAGEMENT** Definition of Small Scale Industries, Strengths and Weaknesses of Small Business, Growth Strategies in Small Scale Enterprises, Sickness in Small Enterprises – Symptoms, Causes and Consequences.	9
	Total Instructional Hours	**45**

Course Outcome

On completion of the course the students will be able to

CO1: Understand the concepts of entrepreneurship and its importance.
CO2: Understand the traits of an entrepreneur and the sources of his motivation.
CO3: Demonstrate knowledge of various sources of finance and institutions supporting entrepreneurship.
CO4: Understand the components of a business plan.
CO5: Understand the nature of small business and causes of industrial sickness.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME7202	POWER PLANT ENGINEERING	3	0	0	3

Course Objective

1. To understand the steam power plants.
2. To learn about Nuclear Power Plants.
3. To gain knowledge about Renewable Energy Power Plant.
4. To evaluate about Energy Economics.
5. To study about pollution control and waste disposal.

Unit	Description	Instructional Hours
I	**STEAM POWER PLANTS** Rankine cycle - improvisations, Layout of modern coal power plant, Super Critical Boilers, FBC Boilers, Turbines, Condensers, Steam & Heat rate, Subsystems of thermal power plants – Fuel and ash handling, Draught system, Feed water treatment. Binary Cycles and Cogeneration systems. Performance and maintenance of boilers. Pollution control technologies including Waste Disposal Options for Coal Power Plants.	10
II	**DIESEL, GAS TURBINE AND COMBINED CYCLE POWER PLANTS** Otto, Diesel, Dual & Brayton Cycle - Analysis & Optimization. Components of Diesel and Gas Turbine. Power plants. Combined Cycle Power Plants. Integrated Gasifier based Combined Cycle systems.	10
III	**NUCLEAR POWER PLANTS** Basics of Nuclear Engineering, Layout and subsystems of Nuclear Power Plants, Working of Nuclear Reactors: Boiling Water Reactor (BWR), Pressurized Water Reactor (PWR), Canadian deuterium uranium reactor (CANDU), Breeder, Gas Cooled and Liquid Metal Cooled Reactors. Safety measures for Nuclear Power plants. Pollution control technologies including Waste Disposal Options for Nuclear Power Plants.	8
IV	**RENEWABLE ENERGY POWER PLANTS** Hydro Electric Power Plants – Classification, Typical Layout and associated components including Turbines. Principle, Construction and working of Wind, Tidal, Solar Photo Voltaic (SPV), Solar Thermal, Geo Thermal, Biogas and Fuel Cell power systems. MHD Power plants.	10
V	**ENERGY ECONOMICS** Power tariff types, Load distribution parameters, load curve, Comparison of site selection criteria, relative merits & demerits, Capital & Operating Cost of different power plants.	7
	Total Instructional Hours	**45**

Course Outcome

Students will be able to:

CO1: Describe the operation and maintenance of power plant.

CO2: Understand the design, operation and maintenance of Hydro-electric power plant from mechanical engineering perspective.

CO3: Explain the role of mechanical engineers in the design, operation and maintenance of steam and Nuclear power plant.

CO4: Provender the essential of renewable energy.

CO5: Analyze the power plant economics, renovation and moderation of old power plant.

TEXT BOOKS:

T1 - Nag. P.K., "Power Plant Engineering", Third Edition, Tata McGraw – Hill Publishing Company Ltd., 2008.
T2 - Thomas C. Elliott, Kao Chen and Robert C. Swanekamp, "Power Plant Engineering", Second Edition, Standard Handbook of McGraw – Hill, 1998.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME7203	PRINCIPLES OF MANAGEMENT	3	0	0	3

Course Objective

1. To provide an overview of the theory and practice of management concepts.
2. To educate students in planning and decision making.
3. To understand the evolution of management, its history and the development of management concepts.
4. To expose the theories of management, organizing strategies and management practice in organizations
5. To familiarize with various controlling techniques of Management activities

Unit	Description	Instructional Hours
I	**INTRODUCTION TO MANAGEMENT AND ORGANIZATIONS** Definition of Management – Science or Art – Manager Vs Entrepreneur - types of managers - managerial roles and skills – Evolution of Management – Scientific, human relations , Types of Business organization - Sole proprietorship, partnership, company-public and private sector enterprises - Impact of Environment and cultural variables on organization structure & Style – Current trends and issues in Management.	9
II	**PLANNING** Nature and purpose of planning – Forecasting and planning process – types of planning – objectives – setting objectives – policies – Planning premises – Strategic planning process –Decision making steps, process ,Rational decision making models and techniques – Decision Tree, PERT and CPM.	9
III	**ORGANISING** Nature and purpose – Formal and informal organization – organization chart – organization structure– types – Line and staff authority – departmentalization – delegation of authority – centralization and decentralization – Job Design - Human Resource Management – HR Planning, Recruitment, selection, Training and Development, Performance Management , Career planning and management.	9
IV	**DIRECTING** Foundations of individual and group behaviour – motivation – motivation theories – motivational techniques – job satisfaction – job enrichment – leadership – types and theories of leadership – communication – process of communication – barrier in communication – effective communication – communication and IT.	9
V	**CONTROLLING** System and process of controlling – budgetary and non-budgetary control techniques – use of computers and IT in Management control – Productivity management – control of cost , maintenance and performance – direct and preventive control – reporting.	9
	Total Instructional Hours	**45**

Course Outcome

Students will be able to:

CO1: Understand the principles and concepts of management.
CO2: Carry out the process of planning and decision making on employment.
CO3: Perform organizing, departmentation, Recruitment and training in various organizations.
CO4: Apply different controlling techniques to control organizational activities.
CO5: Analyze and apply basic knowledge of management tools & techniques and ISO concepts.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME7001	COMPREHENSION LAB	0	0	4	2

Course Objective

To provide opportunity and encourage the student to apply the knowledge acquired during the earlier semesters to real life problems which he / she may have to face in future as an engineer through periodic exercise.

Description

METHOD OF EVALUATION:

- The problems given to the students should be of real, like industrial problems selected by the faculty members of the concerned course.
- While learning as how to solve the real time problems, student will receive guidance from the faculty and also review various courses learnt earlier.
- The students work individually and as a group to solve a variety of problems given to them.
- Further this comprehension is to achieve an understanding of the fundamentals of contemporary manufacturing systems including design, materials, manufacturing, process, product and process control, computer integrated manufacture and quality.
- The evaluation is based on continuous assessment by the Faculty Member constituted by the professor in-charge of the course.
- The students will be assessed 100% internally through weekly test with objective type questions on all the subject related topics.

Total Instructional Hours 45

Course Outcome

Students will be able to:
CO1: Understand and comprehend any given problem related to mechanical engineering field.
CO2: Apply knowledge to real time industrial solutions.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME7901	PROJECT PHASE - I	0	0	6	3

Course Objective

- To identify a problem in the field of Mechanical Engineering and provide solutions, which are technically, economically and environmentally feasible.
- To train the students in preparing a project reports, presentations to face the reviews and final university viva examinations.

Project work assignment:

- Enable the students to form a convenient group with not more than four students.
- The project groups are assigned with a supervisor who is the faculty member of the respective department.
- In the case of industrial projects, one additional supervisor may be assigned as external supervisor.
- The students have to identify a technical problem related to the Mechanical Engineering based on the technical knowledge gained during the period of study.
- Four hours per week have been allotted in the time table.
- During project works, students can get the guidance from the supervisor(s), visiting library for literature review, conducting experiments related to the project work, computer simulation studies, field work, visiting industries (in the case of industry sponsored project works), case studies or basic research and development work assigned by the supervisor.
- The student has to make two presentations based on their project works.
- The solutions provided by the students should be technically, economically and environment friendly feasible.
- The project evaluation committee (constituted by the Head of Department) has evaluated the problem identification.
- The students has to consolidate the work as project report, which includes Introduction, Literature review, Modeling or simulation details, Experimental details, Results and discussions and Conclusions.
- The student should follow the guidelines for preparing the project work.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME8902	PROJECT PHASE - II	0	0	24	6

Course Objective

- To learn the practical knowledge and skills in the field of Mechanical Engineering.
- To get an experience and confidence level in a particular domain.
- To train the students in preparing a project reports to face the reviews and viva examinations.

Project work assignment:

- Enable the students to form a convenient group of not more than four students and assigning them in a task involving theoretical and experimental studies related to Mechanical Engineering.
- The project groups are assigned with a supervisor who is the faculty member of the respective department. In the case of industrial projects, one additional supervisor may be assigned as external supervisor.
- Twelve hours per week have been allotted in the time table. The students can get the guidance from the supervisor(s), visiting library for literature review, conducting experiments related to the project work, computer simulation studies, field work, visiting industries (in the case of industry sponsored project works), case studies or basic research and development work assigned by the supervisor. Moreover, the student has to present three seminars based on the progress of their project works.
- The student has to apply his/her knowledge and skills to identify a suitable problem in the field of Mechanical Engineering and has to provide solutions, which are technically, economically and environment friendly feasible solution.
- The project evaluation committee (constituted by the Head of Department) has evaluated the project progress based on three reviews.
- The students has to consolidate the comprehensive review report, which includes Introduction (An Overview, Background and motivation, Objectives and methodology), Literature review (the studies reported during last ten years, problem identification and solution), Modeling or simulation details (equations used in the modeling, assumptions, specifications, details of the project work etc.), Experimental details (Description of experimental setup, instrumentation, experimental procedure), Results and discussions (comprehensive summary of experimental observations and discussions on improvements observed) and Conclusions (comprehensive summary of the major outcomes observed in the project work). The student should follow the guidelines for preparing the project work.

ELECTIVE – III

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME7301	DESIGN OF JIGS, FIXTURES AND PRESS TOOLS (COMMON TO MECHANICAL AND AUTOMOBILE ENGINEERING)	3	0	0	3

Course Objective

1. To understand the functions and design principles of Jigs, fixtures and press tools Study important methods of analysis of in chromatography.
2. To gain proficiency in the development of required views of the final design.
3. To impart knowledge in Jigs and fixtures, and various kinds of locating devices.
4. To understand the Principles of jigs and fixtures.
5. To know the important considerations while designing Jigs and Fixtures.

Unit	Description	Instructional Hours
I	**PURPOSE TYPES AND FUNCTIONS OF JIGS AND FIXTURES** Tool design objectives - Production devices – inspection devices, Materials used in Jigs and Fixtures – Types of Jigs - Types of Fixtures-Mechanical, pneumatic and hydraulic actuation-Analysis of clamping force-Tolerance and error analysis.	9
II	**JIGS** Drill bushes –different types of jigs-plate latch, channel, box, post, angle plate, angular post, turnover, pot jigs-Automatic drill jigs-Rack and pinion operated. Air operated Jig components. Design and development of Jigs for given components.	9
III	**FIXTURES** General principles of boring, lathe, milling and broaching fixtures- Grinding, planning and shaping fixtures assembly, Inspection and welding fixtures- Modular fixtures. Design and development of fixtures for given components.	9
IV	**PRESS WORKING TERMINOLOGIES AND ELEMENTS OF DIES AND STRIP LAY OUT** Press working terminology-Presses and press accessories-Computation of capacities and tonnage requirements. Elements of progressive combination and compound dies: Die block-die shoe. Bolster plate-punch plate- punch holder-guide pins and bushes – strippers – knockouts-stops –pilots-Selection of standard die sets strip layout-strip lay out calculations.	9
V	**DESIGN AND DEVELOPMENT OF DIES** Design and development of progressive and compound dies for Blanking and piercing operations. Bending dies – development of bending dies-forming and drawing dies-Development of drawing dies. Design considerations in forging, extrusion, casting and plastic dies.	9
	Total Instructional Hours	**45**

Course Outcome

On completion of the course the students will be able to

CO1: demonstrate and analyze the types and functions of jigs and fixtures.
CO2: design, specify and analyze the jigs for various applications.
CO3: demonstrate and design the fixtures for various applications.
CO4: demonstrate and analyze the press working terminologies of die and strip layout.
CO5: design, specify and analyze the dies for different applications.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME7302	DESIGN FOR MANUFACTURE AND ASSEMBLY	3	0	0	3

Course Objective

1. To understand the selection of materials, methods, fit and tolerance concepts to design a product.
2. To familiarize the basic concept of design for castings, welding, sheet metal, forging and manufacturing processes
3. To understand the basic procedure of design for assembly and remanufacture.
4. To impart knowledge in Techniques to reduce environmental impact.
5. To learn global issues and design for environments.

Unit	Description	Instructional Hours
I	**Introduction to Tolerances** Tolerances- Limits, Fits, tolerance Chains, Charts and identification of functional dimensions- Design for manufacturability considerations - Geometric tolerances- Indian standards, ASME standards and Applications- surface finish.	7
II	**Design for Castings, Welding, Sheet Metal and Forging Processes** Materials - Selection Factors- Space factor - Size - Weight - Surface properties and Manufacturing methods. Design for castings- parting line, Minimization of core – Design for welding process - Welding defects – Design for Sheet metal operations- Design for Forging process- Case Studies.	12
III	**Design for Machining Processes** Design features for machining – Lathe, Drilling, Milling operations- Keyways - Doweling, Counter sunk screws - Simplification by separation and amalgamation- Design for machinability, economy, clamp ability and accessibility- factors for reducing machining area.	12
IV	**Design for Assembly** Rules and methodologies to design components-manual, automatic and flexible assembly- DFMA Tools- concurrent engineering – Redesign, DFA-index, poke-yoke, lean and six sigma concepts, design for manual and automatic assembly.	7
V	**Design for the Environment** Introduction – Environmental objectives – Global issues – Regional and local issues – Guide lines, Methods and applications – Lifecycle assessment –Techniques to reduce environmental impact – Design to minimize material usage – Design for disassembly – Design for Recyclability – Design for remanufacture.	7
	Total Instructional Hours	**45**

Course Outcome

Students will be able to:

CO1: Understand the selection of materials, methods, fit and tolerance concepts to design a product.

CO2: Familiar in the basic concept of design for castings, welding, sheet metal, forging and manufacturing processes

CO3: Understand the basic procedure of design for assembly and remanufacture.

CO4: Impart knowledge in Techniques to reduce environmental impact.

CO5: Studied the global issues and design for environments.

HiCET

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME7303	TOOL AND DIE DESIGN	3	0	0	3

Course Objective

1. To understand the fundamentals of work holding devices.
2. To impart knowledge in design tools, dies, jigs and fixtures.
3. To analyze and optimize an existing jig and fixture.
4. To gain proficiency when design of dies for press work and forging.
5. To design tools to maintain precision accuracy of the component produced.

Unit	Description	Instructional Hours
I	**DESIGN OF CUTTING TOOLS** Metal cutting process - Selection of tool materials - Design of single point and multipoint cutting tool - Form tools, Drills, Milling cutters, broaches and chip breakers – Problems on design of single point cutting tools only.	9
II	**LOCATING AND CLAMPING METHODS** Basic Principles of Location - Locating methods and devices - Principles of clamping - Mechanical, Pneumatic and Hydraulic actuation - Clamping force analysis – Design problems.	9
III	**DESIGN OF JIGS AND FIXTURES** Types of drill jigs - General considerations in the design of drill jigs - Drill bushings - Types, methods of construction - Simple designs of Plate, Channel, Boxes, Post, Angle plate, Turnovers and Pot Jigs. Types of fixtures - Fixtures for machine tools: Lathe, Milling, Boring, Broaching and grinding - Assembly fixtures - Inspection and Welding fixtures.	9
IV	**DESIGN OF DIES** Press tools - Fundamentals of die-cutting operations - Cutting action in punch and die operations - Die clearance - Blanking and Piercing Die construction – Pilots - Strippers and Pressure Pads.	9
V	**PRESS WORK MATERIALS AND MOULD DESIGN** Strip layout - Design of simple progressive and compound die sets - Forging Die – Flow lines, parting lines, open and close die forging; Materials for die block. General mould construction. Design of ejection, feed and cooling systems. Parting surface design. Side cores and side cavities. Product design for die casting and injection molding.	9
	Total Instructional Hours	**45**

Course Outcome

Students will be able to:

CO1: Identify the importance of work holding device.
CO2: Design jigs and fixtures.
CO3: Calculate the required specifications of a press for required operations.
CO4: Design tools and dies for required operations.
CO5: Design, specify and analyze the dies for different applications.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME7304	DESIGN OF MATERIAL HANDLING EQUIPMENTS	3	0	0	3

Course Objective

1. To impart knowledge to the students on the need, uses and applications of different material handling equipments.
2. To understand various types of material handling equipments.
3. To gain knowledge on selection and applications of material handling equipments.
4. To understand the design concepts of various hoists.
5. To learn about the design concepts of conveyors and elevators.

Unit	Description	Instructional Hours
I	**MATERIALS HANDLING EQUIPMENT** Types, selection and applications.	5
II	**DESIGN OF HOISTS** Design of hoisting elements: Welded and roller chains - Hemp and wire ropes - Design of ropes, pulleys, pulley systems, sprockets and drums, Load handling attachments. Design of forged hooks and eye hooks – crane grabs - lifting magnets - Grabbing attachments - Design of arresting gear - Brakes: shoe, band and cone types.	10
III	**DRIVES OF HOISTING GEAR** Hand and power drives - Traveling gear - Rail traveling mechanism - cantilever and monorail cranes - slewing, jib and luffing gear - cogwheel drive - selecting the motor ratings.	10
IV	**CONVEYORS** Types - description - design and applications of Belt conveyors, apron conveyors and escalators Pneumatic conveyors, Screw conveyors and vibratory conveyors.	10
V	**ELEVATORS** Bucket elevators: design - loading and bucket arrangements - Cage elevators - shaft way, guides, counter weights, hoisting machine, safety devices - Design of fork lift trucks.	10
	Total Instructional Hours	**45**

Course Outcome

CO1: Gain knowledge on the need, uses and applications of different material handling equipments.
CO2: Obtain knowledge on various types of material handling equipments.
CO3: Gain knowledge on selection and applications of material handling equipments.
CO4: Understand the design concepts of various hoists.
CO5: Apply knowledge and solve problems on design concepts of conveyors and elevators.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME7305	INDUSTRIAL ROBOTICS AND EXPERT SYSTEMS	3	0	0	3

Course Objective

1. To understand the functions of the basic components of a Robot.
2. To study the use of various types of End Effectors and Sensors.
3. To impart knowledge in Robot Kinematics and Programming.
4. To learn Robot safety issues and economics.
5. To impart knowledge in Robot cell design.

Unit	Description	Instructional Hours
I	**INTRODUCTION AND ROBOT KINEMATICS** Definition need and scope of Industrial robots – Robot anatomy – Work volume – Precision movement – End effectors – Sensors. Robot Kinematics – Direct and inverse kinematics – Robot trajectories – Control of robot manipulators – Robot dynamics – Methods for orientation and location of objects.	10
II	**ROBOT DRIVES AND CONTROL** Controlling the Robot motion – Position and velocity sensing devices – Design of drive systems – Hydraulic and Pneumatic drives – Linear and rotary actuators and control valves – Electro hydraulic servo valves, electric drives – Motors – Designing of end effectors – Vacuum, magnetic and air operated grippers.	9
III	**ROBOT SENSORS** Transducers and Sensors – Tactile sensor – Proximity and range sensors – Sensing joint forces – Robotic vision system – Image Representation - Image Grabbing –Image processing and analysis – Edge Enhancement – Contrast Stretching – Band Rationing - Image segmentation – Pattern recognition – Training of vision system.	9
IV	**ROBOT CELL DESIGN AND APPLICATION** Robot work cell design and control – Safety in Robotics – Robot cell layouts – Multiple Robots and machine interference – Robot cycle time analysis. Industrial application of robots.	9
V	**ROBOT PROGRAMMING, ARTIFICIAL INTELLIGENCE AND EXPERT SYSTEMS** Methods of Robot Programming – Characteristics of task level languages lead through programming methods – Motion interpolation. Artificial intelligence – Basics – Goals of artificial intelligence – AI techniques – problem representation in AI – Problem reduction and solution techniques - Application of AI and KBES in Robots.	8
	Total Instructional Hours	**45**

Course Outcome

Students will be able to:

CO1: Understand the functions of the basic components of a Robot.
CO2: Study the use of various types of End Effectors and Sensors.
CO3: Gain knowledge in Robot Kinematics and Programming.
CO4: Impart knowledge on the use Robot safety issues and economics.
CO5: Impart knowledge in Robot cell design.

ELECTIVE – IV

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME7306	OPERATIONS RESEARCH (COMMON TO MECHANICAL AND AUTOMOBILE ENGINEERING)	3	0	0	3

Course Objective

1. To provide knowledge in using optimization techniques under limited resources for the Engineering and business problems.
2. To understand the Transportation Models and project Management Network Models.
3. To study the inventory management Techniques.
4. To understand the Queuing Models.
5. To understand various Decision making approaches.

Unit	Description	Instructional Hours
I	**LINEAR MODELS** The phase of an operation research study – Linear programming – Graphical method– Simplex algorithm – Duality formulation – Sensitivity analysis.	9
II	**TRANSPORTATION MODELS AND NETWORK MODELS** Transportation Assignment Models –Traveling Salesman problem-Networks models – Shortest route– Minimal spanning tree – Maximum flow models –Project network – CPM and PERT networks – Critical path scheduling – Sequencing models.	9
III	**INVENTORY MODELS** Forecasting Methods - Inventory models – Economic order quantity models – Quantity discount models – Stochastic inventory models – Multi product models – Inventory control models in practice.	9
IV	**QUEUEING MODELS** Queueing models - Queueing systems and structures – Notation parameter – Single server and multi server models – Poisson input – Exponential service – Constant rate service – Infinite population – Simulation.	9
V	**DECISION MODELS** Decision models – Game theory – Two person zero sum games – Graphical solution- Algebraic solution– Linear Programming solution – Replacement models – Models based on service life – Economic life– Single / Multi variable search technique.	9
	Total Instructional Hours	**45**

Course Outcome

Students will be able to:

CO1: Understand the optimization techniques under limited resources for the Engineering and business Problems.
CO2: Solve the problems on Transportation Models and project Management Network Models.
CO3: Gain knowledge about the inventory management Techniques.
CO4: understand and solve the numerical on Queuing Models.
CO5: Gain knowledge about various Decision making approaches.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME7307	INDUSTRIAL ENGINEERING	3	0	0	3

Course Objective

1. To introduce the concepts, principles and framework of contents of Industrial Engineering.
2. To introduce the principles of work study, Method study and Value Engineering.
3. To introduce the concepts and frame work of work measurements.
4. To introduce the concepts of various cost accounting and financial management practices as applied in industries and facility design.
5. To acquaint the students with different aspects of Industrial Safety rules.

Unit	Description	Instructional Hours
I	**INTRODUCTION TO INDUSTRIAL ENGINEERING AND PRODUCTIVITY** Introduction: Definition and Role of Indus trial Engineering, Contribution of Taylor and Gilbreth, Organization: Concept of organization, characteristics of organization, elements of organization, organizational structure, organization charts; Types of organization. - Formal line, military organization, functional organization, line & staff organization; Introduction to management principles, authority and responsibility, span of control, delegation of authority. Productivity: Definition of productivity, Productivity of materials, land, building, machine and power. Measurement of productivity: factors affecting the productivity, Productivity Models and Index (Numerical), productivity improvement programmers.	9
II	**METHOD STUDY** Work Study: Definition, objective and scope of work-study. Human factors in work-study. Method Study: Definition, objective and scope of method study, activity recording and exam aids, Charts to record moments in shop -operation process charts, flow process charts, travel chart, two handed chart and multiple activity charts. Charts to record movement at work place -principles of motion economy, classification of moments, SIMO chart, and micro motion study. Definition and installation of the improved method, brief concept about synthetic motion studies.(Numerical); Introduction to Value Engineering and Value Analysis;.	9
III	**WORK MEASUREMENTS** Work Measurements: Definition, objectives and uses; Work measurement techniques. Work sampling - need, confidence levels, sample size determinations, random observation conducting study with the simple problems. Time study: Definition, time study equipment, selection of job, steps in time study. Breaking jobs into elements, recording information. Rating and standard rating, standard performance, scales of rating, factors affecting rate of working, allowances and standard time determination; Introduction to PMTS and MTM. (Numerical), Introduction to MOST.	9
IV	**FACILITY DESIGN** Facility location Factors and Evaluation of Alternate Locations; Types of Plant Layout; Computer Aided Layout Design Techniques; Assembly Line Balancing (Numerical); Material Handling: Principles, Types of Material Handling Devices; Stores Management Inventory Control: Functions, costs, classifications - deterministic and probabilistic inventory models, Concept of EOQ, purchase model without shortages (Numerical); ABC and VED Analysis.	9
V	**ENGINEERING ECONOMY AND INDUSTRIAL SAFETY** Engineering Economy and Costing: Elementary Cost Accounting and Methods of Depreciation; Break-Even Analysis (Numerical); Introduction to Debit and Credit Note, Financial Statements (Profit and Loss Account and Balance Sheet), Techniques for Evaluation of Capital Investments. Industrial Safety: Safety Organization, Safety Programme, General Safety Rules.	9
	Total Instructional Hours	**45**

Course Outcome

Students will be able to:

CO1: Apply the Industrial Engineering concepts in the industrial environment.

CO2: Manage and implement different concepts involved in methods study and understanding of work content in different situations. Undertake project work based on the course content.

CO3: Describe different aspects of work system design and facilities design pertinent to manufacturing industries.

CO4: Identify various cost accounting and financial management practices widely applied in industries.

CO5: Develop capability in integrating knowledge of design along with other aspects of value addition in the conceptualization and manufacturing stage of various products.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME7308	PRODUCTION PLANNING AND CONTROL	3	0	0	3

Course Objective

1. To understand the major production planning and control issues in both service and manufacturing industries.
2. To know the qualitative and quantitative forecasting techniques and their influence on production planning and control.
3. To understand the push and pull philosophies in production planning and compare different methods in production scheduling
4. To know the recent trends like manufacturing requirement Planning (MRP II) and Enterprise Resource Planning (ERP).
5. To Solve inventory control and planning issues using either deterministic or stochastic modeling.

Unit	Description	Instructional Hours
I	**INTRODUCTION** Objectives and benefits of planning and control-Functions of production control-Types of production-job- batch and continuous-Product development and design-Marketing aspect - Functional aspects-Operational aspect-Durability and dependability aspect aesthetic aspect. Profit consideration.	9
II	**FORECASTING AND WORK STUDY** Forecasting - Subjective estimate - survey - Delphi method - Regression models - Single variable model Two variable model -Econometric models - Input-output model. Method study, Implementation - Micro motion and memo motion study – work measurement - Techniques of work measurement - Time study - Production study - Work sampling.	9
III	**SHOP FLOOR CONTROL, JUST IN TIME AND MPS** Shop Floor Control Techniques – Basic Shop floor control concepts – Gantt charts. Just in Time – Major elements of JIT – JIT corner stones and the linkages to MPC, Master production scheduling techniques, Bill of material structuring for the MPS.	9
IV	**PRODUCTION SCHEDULING** Frame work for the MPC system - the system and the frame work, Material flows, Individual firm. MRP in MPC: MRP and MRP II: Basic MRP record, Linking MRP records, Scheduled receipts versus planned order releases, MRP planner, MRP system output, MRP Database.	9
V	**INVENTORY CONTROL AND RECENT TRENDS IN PPC** Inventory control-Purpose of holding stock-Effect of demand on inventories-Ordering procedures. Two bin system -Ordering cycle system-Determination of Economic order quantity and economic lot size-ABC analysis-Recorder procedure-Introduction to computer integrated production planning systems.	9
	Total Instructional Hours	**45**

Course Outcome

Upon completion of this course, the students can able to

CO 1.Prepare the major production planning and control activities.

CO 2.Identify qualitative and quantitative forecasting techniques and their influence on production planning and control.

CO 3.Know to prepare the Master Production Scheduling and aggregate planning.

CO 4.Prepare manufacturing requirement Planning (MRP II) and Enterprise Resource Planning (ERP).

CO 5.Determine Economic order quantity in either deterministic or stochastic modeling.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME7309	TOTAL QUALITY MANAGEMENT (COMMON TO MECHANICAL, MECHATRONICS AND AUTOMOBILE ENGINEERING)	3	0	0	3

Course Objective

1. Acquire knowledge on TQM concepts.
2. To Acquire knowledge on customer satisfaction, motivation etc.
3. Develop skills to use TQM tools for domain specific applications.
4. To explore industrial applications of Quality function deployment and taguchi quality concepts
5. To impart detail exposure to students on various quality systems like ISO and its standards.

Unit	Description	Instructional Hours
I	**INTRODUCTION** Introduction - Definition of quality - Dimensions of quality - Basic concepts of TQM - TQM Framework – Gurus of TQM - Contributions of Deming, Juan and Crosby - Barriers to TQM Implementation– Principles of TQM- Quality statements - Quality Council - Quality circle- Costs of Quality- Leadership.	9
II	**TQM PRINCIPLES** Customer satisfaction - Strategic quality planning - Customer complaints, Customer retention - Employee involvement - Motivation, Empowerment – Teams - Recognition and Reward, Performance appraisal - PDSA Cycle, 5S, Kaizen - Supplier Partnership - Partnering, Supplier selection, Supplier Rating – Supplier Certification.	9
III	**STATISTICAL PROCESS CONTROL** The seven traditional tools of Quality - New Seven Management tools – Statistical Fundamentals – Measures of central Tendency and Dispersion, Population and Sample - Control Charts - Concept of Six sigma- Process capability - Bench marking - Reason to bench mark, Bench marking process.	9
IV	**TQM TOOLS** Quality Function Deployment (QFD) -Taguchi quality loss function – Total Productive Maintenance (TPM) - Concepts, improvement needs - Performance measures - FMEA - Stages, Types.	9
V	**QUALITY SYSTEMS** Need for ISO 9000 and other Quality System - ISO 9001-2008 Quality System – Elements - Implementation of Quality System - Documentation, Quality Auditing - QS 9000 - ISO 14000 - Concepts, Requirements and Benefits.	9
	Total Instructional Hours	**45**

Course Outcome

Upon completion of the course, the students will be able to

CO1: Understand quality concepts and philosophies of TQM.
CO2: Apply TQM principles and concepts of continuous improvement.
CO3: Apply and analyze the quality tools, management tools and statistical fundamentals to improve quality.
CO4: Understand the TQM tools as a means to improve quality.
CO5: Remember and understand the ISO quality systems and procedures adopted.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME7310	EXPERIMENTAL METHODS FOR ENGINEERS	3	0	0	3

Course Objective

1. Understand the basic concept of engineering experimentation.
2. Understand the working principle of measuring instruments.
3. Identify the necessity of controllers.
4. Recognize and analysis various experimental methods.
5. Calculate error and uncertainty analysis.

Unit	Description	Instructional Hours
I	**DESIGN OF EXPERIMENTS** Planning of experiments and documenting experiments, various stages in experimental investigations; preliminary, intermediate and final, steady state and transient techniques, selection of measuring devices based on static, dynamic characteristics and allowable uncertainties, basics of Taguchi method for design of experiments, optimization of experimentation, statistical methods for analyzing the experimental data. Review of literature, problem identification; identify a possible solution, preparation of technical report.	9
II	**MEASURING INSTRUMENTS** Temperature measuring instruments: thermocouples, thermometers, RTDs, Infra red thermometers, calibration of thermocouples, thermo positive elements, thermocouples in series & parallel, pyrometry, design of temperature measuring instruments. Pressure measuring instruments: pressure gauges, manometers, pressure transducers, calibration of pressure measuring instruments. Flow measuring instruments: orifice meter, venturimeter, Rotameters, corrolius mass flow meters, anemometers, non contact type mass flow meters. Miscellaneous measurements: Measurement of shaft loads, heat flux, thermal radiation, turbulence, noise etc. Measurement of material properties: mechanical and thermal properties.	9
III	**ADVANCEMENT IN MEASUREMENTS** Data logging and acquisition, use of sensors for error reduction, elements of micro computer interfacing, intelligent instruments and their use, Basics of P, PI, PID controllers, pneumatic and hydraulic controllers, electronic controllers.	9
IV	**ADVANCE MEASUREMENT TECHNIQUES AND ANALYSIS** Shadowgraph, Sunshine recorder, Quality of indoor air, Interferometer, Laser Doppler Anemometer, Hot wire Anemometer, Telemetry in measurement, Orsat apparatus, Gas Analyzers, Smoke meters, gas chromatography, spectrometry, load	9
V	**ERROR ANALYSIS** Errors in instruments, Analysis of experimental data and determination of overall uncertainties in experimental investigations, uncertainties in measurement of pressure, temperature, flow, torque, properties, power and calculated parameters under various conditions.	9
	Total Instructional Hours	**45**

Course Outcome

At the end of the course, the students able to:

CO1 - Plan the experimentation.
CO2 - Selecting appropriate measuring instruments.
CO3 - Identify the suitable controls.
CO4 - Understanding the working principle of advanced measuring instruments.
CO5 - Calculate the errors in experiments.

ELECTIVE – V

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME8301	MAINTENANCE ENGINEERING	3	0	0	3

Course Objective

1. To study the principles and functions of maintenance planning.
2. To learn the types of maintenance.
3. Gain knowledge about condition monitoring.
4. Understand the repair methods for machine elements.
5. Understand the repair methods for material handling equipments.

Unit	Description	Instructional Hours
I	**PRINCIPLES AND PRACTICES OF MAINTENANCE PLANNING** Basic Principles of maintenance planning – Objectives and principles of planned maintenance activity – Importance and benefits of sound Maintenance systems – Reliability and machine availability – MTBF, MTTR and MWT – Factors of availability – Maintenance organization – Maintenance economics.	9
II	**MAINTENANCE POLICIES – PREVENTIVE MAINTENANCE** Maintenance categories – Comparative merits of each category – Preventive maintenance, maintenance schedules, repair cycle - Principles and methods of lubrication – TPM.	9
III	**CONDITION MONITORING** Condition Monitoring – Cost comparison with and without CM – On-load testing and offload testing – Methods and instruments for CM – Temperature sensitive tapes – Pistol thermometers – wear-debris analysis.	9
IV	**REPAIR METHODS FOR BASIC MACHINE ELEMENTS** Repair methods for beds, slide ways, spindles, gears, lead screws and bearings – Failure analysis – Failures and their development – Logical fault location methods – Sequential fault location.	9
V	**REPAIR METHODS FOR MATERIAL HANDLING EQUIPMENT** Repair methods for Material handling equipment - Equipment records –Job order systems -Use of computers in maintenance.	9
	Total Instructional Hours	**45**

Course Outcome

Students will be able to:

CO1: Understand the maintenance planning functions.
CO2: Identify maintenance policies and types.
CO3: Gain knowledge about methods and instruments for CM.
CO4: To analyze failure of machine parts.
CO5: Implement failure analysis in material handling equipments.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME8302	INDUSTRIAL SAFETY ENGINEERING	3	0	0	3

Course Objective

1. To provide in depth knowledge in Principles of safety and Prevention of accident in various fields.
2. To understand the basics on safety organization.
3. To expose the students to the basics in Human safety and hazard management.
4. To learn about human safety.
5. To study about Industrial Hygiene and Hazards.

Unit	Description	Instructional Hours
I	**INTRODUCTION ANDACCIDENT PREVENTION** Definition-Development before industrial revolution-Milestones in industrial safety movement-Development of accident prevention programs-3 E's of safety- Development of Safety Organizations-Safety and health movement- Managing emergency in industries. Safety and productivity-Fallacies about safety-Industrial psychology in accident prevention-Basic philosophy of accident prevention-Unsafe condition, Unsafe act, Injury, Fault of persons- Cost of accidents- Safety education.	9
II	**SAFETY ORGANIZATION** Purpose of a safety organization-Safety policy- Safety committee- types- Role of safety coordinator-Responsibilities, Interferences and Sufferings of safety supervisor-Safety Publicity-Accident Reporting-Accident Investigation-Accident Statistics-Safety audits.	9
III	**INDUSTRIAL PROCESS SAFETY** Overview-Safety performance by industry sector-Incident Pyramid-Process hazard and risk-Failure of defences- Process safety management-Scope, Functions, Features and Characteristics-Role of organizational levels in Process Safety Management-Assessing organizations safety effectiveness.	9
IV	**HUMAN SIDE OF SAFETY** Management of change-Process and equipment integrity-Human behaviour aspects and modes-The Swiss cheese model of industrial accidents-Active and Latent failures-examples - Safety lessons-Human Factors influencing the likelihood of failure-Organizational culture, Demographic effects.	9
V	**INDUSTRIAL HYGIENE AND HAZARDS** OSHA and industrial hygiene-work site analysis-recognizing and controlling hazards-Occupational diseases prevention-Employee Welfare-Statutory welfare schemes, Non-statutory schemes-Health Hazards-Control strategies- Fire hazards and prevention, Electrical hazard prevention and safety.	9
	Total Instructional Hours	**45**

Course Outcome

After successful completion of the course, the students should be able to

CO1: Apply the philosophies behind industrial accidents
CO2: Apply the hierarchical levels in a safety organization
CO3: Understand the concept of industrial process safety
CO4: Understand the safety procedures for human and apply Industries.
CO5: Apply the types of industrial hazards and preventive measures.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME8303	INDUSTRIAL ERGONOMICS	3	0	0	3

Course Objective

1. To study ergonomics for the integration of man and machine.
2. To manufacture manageable products those are comfortable to use.
3. To optimize the integration of man and machine in order to increase productivity with accuracy.
4. To familiarize the factors affecting human performance.
5. To evaluate work measurement.

Unit	Description	Instructional Hours
I	**INTRODUCTION** Focus of ergonomics-areas of application in work system-History of ergonomics-Humanization of work -modern ergonomics-future directions for ergonomics-designing for population of users-sources of human variability-Anthropometry in ergonomics-Types of anthropometric data.	9
II	**WORK CAPACITY AND FATIGUE** Stress and fatigue- Muscle function –Types and fatigue-fatigue and discomfort-fatigue after prolonged exertion-fatigue and pain-Electromyography-Cardiovascular system-Respiratory system- work capacity-Factors affecting work capacity.	9
III	**HUMAN ERROR AND SAFETY** Factors influencing human error-Mental work load in human-machine interaction-physiological and psychological measures of mental work load-error categorization-error production-error detection-Heuristics and biases in human decision making- Accidents and safety-Scope of accident investigation.	9
IV	**PHYSICAL ERGONOMICS** Physical work load and energy expenditure, Anthropometry – measures – design procedure, Work postures-sitting, standing - measurement – ergonomic implications. Design of displays and controls.	9
V	**ENVIRONMENTAL FACTORS** Sources & effects of Noise, Vibration, lighting, temperature, humidity & atmosphere. Measures for monitoring control & mitigation.	9
	Total Instructional Hours	**45**

Course Outcome

Students will be able to:

CO1: Understand basic principles of ergonomics in humanization.
CO2: Apply the principles of work capacity and fatigue.
CO3: Describe and apply ergonomics principles to promote safety, health and productivity.
CO4: Recognize the different environmental factors that affect human performance.
CO5: Identify the different work measurement techniques.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME8304	METROLOGY AND NON DESTRUCTIVE TESTING	3	0	0	3

Course Objective

1. To impart the knowledge of quality assurance and inspection techniques.
2. To familiarize with the various inspection and measurement techniques like contact and non-contact measurement by adapting Computer Aided Inspection.
3. To impart the knowledge of working principles and calibration of various Systems.
4. To study and understand the various non-destructive evaluation and testing methods, theory and their industrial applications.
5. To provide exposure to the students on various advanced measuring methods and nondestructive testing techniques.

Unit	Description	Instructional Hours
I	**MEASURING MACHINES** Tool Maker's microscope - Co-ordinate measuring machines - Universal measuring machine - Laser viewers for production profile checks - Image shearing microscope - Use of computers - Machine vision technology - Microprocessors in metrology.	9
II	**STATISTICAL QUALITY CONTROL** Data presentation - Statistical measures and tools - Process capability - Confidence and tolerance limits - Control charts for variables and for fraction defectives - Theory of probability - Sampling - ABC standard - Reliability and life testing.	9
III	**LIQUID PENETRANT AND MAGNETIC PARTICLE TESTS** Characteristics of liquid penetrants - different washable systems - Developers - applications - Methods of production of magnetic fields - Principles of operation of magnetic particle test - Applications - Advantages and limitations.	9
IV	**RADIO GRAPHY** Sources of ray-x-ray production - properties of d and x rays - film characteristics – exposure charts - contrasts - operational characteristics of x ray equipment - applications.	9
V	**ULTRASONIC AND ACOUSTIC EMISSION TECHNIQUES** Production of ultrasonic waves - different types of waves - general characteristics of waves - pulse echo method - A, B, C scans - Principles of acoustic emission techniques – Advantages and limitations - Instrumentation - applications.	9
	Total Instructional Hours	**45**

Course Outcome

Students will be able to:
CO1: The student shall be able to understand the concept of Laser Metrology and Computer Integrated Machining Machine.
CO2: The student shall be able to understand the techniques used in statistical quality control.
CO3: The student shall be able to analysis the materials characteristics through various non-destructive tests.
CO4: The student shall be able to understand the knowledge various radiography characteristics and operations.
CO5: The student shall be able to understand the knowledge of ultrasonic and Acoustic emission techniques.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME8305	LOGISTICS AND SUPPLY CHAIN MANAGEMENT	3	0	0	3

Course Objective

1. To make students understand the importance of Logistics and Supply Chain operations in the industrial and business systems.
2. To acquire knowledge on Supply chain integration.
3. To familiarize the best practices of supply chain management.
4. To provide information of procurement and outsourcing strategies.
5. To enable the students about customer relationship management.

Unit	Description	Instructional Hours
I	**LOGISTICS & SUPPLY CHAIN MANAGEMENT** Evolution of Supply Chain, Classification of Logistics Applications, Total logistics cost, Logistics to Supply Chain Management focus, Objectives of Supply Chain Management, Key factors (Drivers and Obstacles) of SCM, Size and potential of SCM market in India, Framework for supply chain planning and decision making, Strategic aspects and managing uncertainty.	9
II	**DYNAMICS OF SCM** Alignment processes with customer order- management system, Supply chain integration through push-pull mechanism, Bullwhip effect mechanism.	9
III	**WORLD-CLASS BEST PRACTICES IN SCM** Supplier tierization, Reverse logistics, Vendor-managed inventory, Milk round system, Hub and spoke, Third and Fourth party logistics (3PL and 4PL), Cross docking, Drop shipping, Trans-shipment, Risk-pooling, RFID, Lean operations.	9
IV	**PROCUREMENT AND OUTSOURCING STRATEGIES** Operational decisions and trends, Strategic outsourcing and partnerships, Bidding and negotiation processes, Vendor rating and development, e-procurement, Vendor Quality Assurance system.	9
V	**CUSTOMER RELATIONSHIP MANAGEMENT AND INFORMATION TECHNOLOGY IN SCM** Concept of CRM and its linkage with SCM, Marketing implications such as value added services, New product development, Strategic pricing, Need and role of IT in SCM, ERP and SCM, Implementing SCM, Performance Measurement of SCM.	9
	Total Instructional Hours	**45**

Course Outcome

After learning the course the students should be able to:

CO1: Understand the concept of logistics and supply chain management.

CO2: Appreciate the importance of logistics function in overall success of any business and industrial sector.

CO3: Apply world-class best practices in supply chain management.

CO4: Execute Vendor Quality Assurance systems.

CO5: Implement very good customer relationship methods.

Course Objective

1. The different types of two and three wheelers types, construction and working.
2. The different power unit functions of two and three wheelers.
3. The location and importance of each part.
4. The maintenance and fault tracing of two and three wheelers.
5. The anatomy of the two and three wheeler in general.

Unit	Description	Instructional Hours
I	**POWER UNIT** Two stroke SI engine, four stroke SI engine; merits and demerits. Symmetrical and unsymmetrical port timing diagrams. Types of scavenging processes; merits and demerits, scavenging pumps. Rotary valve engine. Fuel system. Lubrication system. Magneto coil and battery coil spark ignition system, electronic ignition system. Starting system; Kick starter system.	9
II	**CHASSIS AND SUB-SYSTEMS** Mainframe and its types. Chassis and shaft drive, Single, multiple plates and centrifugal clutches. Gear box and gear controls. Front and rear suspension systems. Shock absorbers. Panel meters and controls on handle bar.	9
III	**BRAKES, WHEELS AND TYRES** Drum brakes, disc brakes, front and rear brake links, layouts. Spokes wheel, cast wheel, disc wheel, disc types. Tyres and tubes.	9
IV	**TWO WHEELERS** Case study of major Indian models of motorcycles, scooters and mopeds. TVS mopeds and motorcycles, HeroHonda motorcycles, Bajaj scooters and motorcycles, Yamaha, Enfield motorcycles. Servicing and maintenance.	9
V	**THREE WHEELERS** Case study of Indian models. Auto rickshaws, pickup van, delivery van and trailer, Maintenance and Fault tracing.	9
	Total Instructional Hours	**45**

Course Outcome

Students will be able to:

CO1: Demonstrate with the various systems in two and three wheeled vehicles.
CO2: Understand different types of two and three wheelers.
CO3: Understand the special parts and their importance and working in two and three wheelers.
CO4: Know the maintenance of two and three wheelers.
CO5: Understand the functioning of clutch and gear box.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME8307	MANUFACTURING OF AUTOMOTIVE COMPONENTS	3	0	0	3

Course Objective

1. The functioning of the engine and its accessories, gear box, clutch, brakes, steering, axles and wheels.
2. Suspension, frame, springs and other connections.
3. Emissions, ignition, controls, electrical systems and ventilation.
4. The manufacturing methods for chassis, dead axle, leaf spring, coil spring and shock absorbers.
5. Understand the basic theory of metal working and metal cutting principles.

Unit	Description	Instructional Hours
I	**CASTED ENGINE COMPONENTS** Material selection and Manufacturing methods for Piston, Piston rings, Cylinder block, wet and dry liners, Engine head, Oil pan, Carburetors. Thermal barrier coating of Engine head and valves.	9
II	**FORGED ENGINE COMPONENTS** Material selection and Manufacturing methods for Crank shaft, Connecting rod, Cam shaft, valve, Piston pin, Push rod, Rocker arm, tappets, spark plug.	9
III	**TRANSMISSION SYSTEM** Material selection and Manufacturing methods for Clutch – Clutch lining – Gear Box – Gear – Propeller Shaft – Differential – Axle Shaft – Bearing – fasteners – Wheel drum. Methods of Gear manufacture – Gear hobbing and gear shaping machines - gear generation – gear finishing and shaving – Grinding and lapping of hobs and shaping cutters – gear honing – gear broaching.	9
IV	**VEHICLE CHASSIS** Material selection and manufacturing methods for chassis, dead axle, leaf spring, coil spring and shock absorbers – wheel housing – steering system, Brake shoes, wheel rim, Tyres. Heat treatment procedures.	9
V	**RECENT DEVELOPMENTS** Surface treatment – Plastics – Plastics in Automobile vehicles – Processing of plastics – Emission control system – catalytic converter – Hydro forming of exhaust manifold and lamp housing – stretch forming of Auto body panels – MMC liners –Selection of materials for Auto components. Use of Robots in Body weldment.	9
	Total Instructional Hours	**45**

Course Outcome

Students will be able to:

CO1: Identify the different parts of the automobile.
CO2: Explain the working of various parts like engine, transmission, clutch, Brakes.
CO3: Describe how the steering and the suspension systems operate.
CO4: Understand the environmental implications of automobile emissions.
CO5: Develop a strong base for understanding future developments in the automobile industry.

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME8308	HYBRID VEHICLES	3	0	0	3

Course Objective

1. To understand the types of heating, ventilation and air conditioning (HVAC) systems.
2. To design and select appropriate HVAC system for a particular application.
3. To learn about air flow ducts and pipes.
4. To familiarize about fans and blowers.
5. To impart knowledge on air pollutants and controls.

Unit	Description	Instructional Hours
I	**INTRODUCTION TO HVAC SYSTMES** Types of air conditioning systems: All water systems, all air systems, air water systems, unitary systems and selection of air conditioning equipments. Air conditioning equipments: Window air conditioners, split air conditioners, packaged air conditioners, centralized air conditioners, evaporative coolers, passive cooling and heating systems. Constant and variable area volume systems.	9
II	**THERMAL LOAD CALCULATIONS** Cooling and heating load calculations: Heat transfer through building structure, occupancy load, electrical loads, occupancy load, ventilation load, infiltration load. Influence of relative humidity in thermal loads. Ventilation standards: Ventilation requirements in air conditioning buildings and ASHRAE standards. Insulation materials: types; properties and economic thickness.	9
III	**DUCTS AND PIPIES IN HVAC SYSTEMS** Air flow through ducts, duct standards, duct fittings, types of air outlets, design of air conditioning ducts. Chill water supply pipe sizing calculations: Piping network for supply and return water line - pipe fittings - lining and insulation - piping system as per ASHRAE standards	9
IV	**FANS AND BLOWERS** Types of fans and blowers, performance characteristics, fan laws, static and dynamic losses in fans, design and selection of fans and blowers for air conditioning plants, cooling towers and ventilation systems, testing, speed, flow and noise control. Test standards of fans and blowers	9
V	**INDOOR AIR QUALITY** Air pollution in air conditioning rooms: effects of air quality, ASHRAE standards. Air filtration: principle of air filtration in HVAC systems, HEPA and ULPA filters, electrostatic cleaners, filter standards, test methods and NAFA certification. Clean rooms: standards for clean rooms, design of clean rooms for hospitals, pharmaceutical and food industries. Measurement of indoor air pollutants, control of pollutants in air conditioning halls.	9
	Total Instructional Hours	45

Course Outcome

Upon completion of this course, the students will be able to:
CO1: Understand the types of HVAC systems.
CO2: Calculate the cooling and heating loads for various air conditioning rooms.
CO3: Design the air conditioning ducts and piping for HVAC systems.
CO4: Select fans and blowers for air conditioning, ventilation and cooling towers.
CO5: Understand the concept of indoor air quality.

TEXT BOOKS:

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME8309	VEHICLE MAINTENANCE	3	0	0	3

Course Objective

1. To familiarize the maintenance and inspections procedures for various components and systems of automobiles.
2. To explain the needs of vehicle maintenance and their importance.
3. Understand the basic concepts of maintenance
4. Learn the engine maintenance and Impart the knowledge about automobile systems maintenance
5. Define the overhauling technique and Identify the maintenance of electrical systems

UNIT	DESCRIPTION	Instructional Hours
I	**MAINTENANCE OF RECORDS AND INSPECTION SCHEDULE** Need for maintenance, classification of maintenance work, requirements of maintenance, preparation of check lists. Inspection schedule, maintenance of records, log sheets and other forms, safety precautions in maintenance: General safety, tool safety.	9
II	**ENGINE MAINTENANCE** Dismantling of engine components, visual and dimensional inspections, minor and major reconditioning of various components, reconditioning methods, engine assembly, special tools used for maintenance overhauling, cleaning and inspection of engine components	9
III	**MAINTENANCE OF FUEL SYSTEM, COOLING & LUBRICATION SYSTEMS** Servicing and maintenance of fuel system, calibration and tuning of engine for optimum fuel supply, Cooling systems, water pump, radiator, thermostat, anticorrosion and antifreeze additives, Lubrication system maintenance,	9
IV	**CHASSIS MAINTENANCE - REPAIR AND OVERHAULING** Servicing and maintenance of clutch, gear box, universal joints, propeller shaft, differential system. service and maintenance of brake, disc and drum brakes, steering wheel and suspension systems, Overhauling and maintenance, wheel alignment, computerized alignment and wheel balancing.	9
V	**ELECTRICAL SYSTEM MAINTENANCE** Servicing and maintenance of battery, starter motor, alternator and generator, ignition system, lighting system, electric horn, and wiper motor, Fault diagnosis and maintenance of modern electronic controls, checking and servicing of dash board instruments.	9
	Total Instructional Hours	**45**

Course Outcome

At the end of the course, students shall be able to

CO1: Prepare the record of vehicle operation, maintenance, service schedules etc.

CO2: Interpret the maintenance procedures and inspections of various components along with systems of Automobile engines & chassis.

CO3: Learn the dismantling of engine components, visual inspections and maintenance of various automobile elements.

CO4: To impart the knowledge about fuel, cooling and lubricating systems of Automobile.

CO5: Explain the details of maintenance, fault diagnosis including inspections of various electrical components and electrical systems.

OPEN ELECTIVE

Programme	Course Code	Name of the Course	L	T	P	C
B.E.	16ME7402	RENEWABLE ENERGY SOURCES	3	0	0	3

Course Objective

1. To know about different primary energy sources and renewable energy sources.
2. To study the solar energy measurement and designing of various solar energy utilized systems.
3. To study the principles of different non-conventional energy sources and their utilization.
4. To understand the applications of energy from waste and designing of biogas plant.
5. To get an exposure in various direct energy conversion systems.

Unit	Description	Instructional Hours
I	**ENERGY AND ENVIRONMENT** Primary energy sources - world energy resources - energy cycle of the earth –environmental aspects of energy utilization, Emissions and Global warming – Renewable energy resources and their importance - Potential impacts of harnessing the different renewable energy resources.	9
II	**SOLAR ENERGY** Principles of solar energy collection -.solar radiation - measurements - instruments - data and estimation- types of collectors - characteristics and design principles of different type of collectors, performance and testing of collectors - Solar water and air heaters - performance and applications - solar cooling - solar drying - solar ponds - solar tower concept - solar furnace.	9
III	**WIND, TIDAL AND GEO THERMAL ENERGY** General theory of windmills - types of windmills - design aspects of horizontal axis windmills – applications - Energy from tides and waves – working principles of tidal plants and ocean thermal energy conversion plants - Geothermal power plants. Principle of ocean thermal energy conversion (OTEC).	9
IV	**BIO ENERGY** Energy from bio mass and bio gas plant – types and design of biogas plants – applications - Energy from wastes - utilization of industrial, municipal and agricultural wastes. Emission norms: emission from renewable fuels and its effect on environment, study of environment protection norms ISO 14000, 16000 etc.	9
V	**DIRECT ENERGY CONVERSION SYSTEM 9 Hours** Magneto hydrodynamic systems (MHD) - thermoelectric generators – thermionic generators - Fuel cells and its classification; Transport mechanism in fuel cells and concept of energy conversion. Solid oxide fuel cells (SOFC); PEM fuel cells; Direct methanol fuel cells (DMFC), Molten carbonate fuel cell (MCFC)- solar cells - types, Emf generated, power output, losses and efficiency applications. Hydrogen conversion and storage systems.	9
	Total Instructional Hours	**45**

Course Outcome

Student upon completion of the course shall be able to:

CO1: Identify the various renewable energy sources and national and international scenario.
CO2: Calculate the performance of solar collectors.
CO3: Explain the working principle of renewable energy power plants and direct energy conversion systems.
CO4: Develop skills in bio energy.
CO5: Implement the energy conversion system.
