

***HINDUSTHAN COLLEGE OF ENGINEERING AND TECHNOLOGY***  
**(An Autonomous Institution Affiliated to Anna University, Chennai)**  
**(Approved by AICTE, New Delhi, Accredited by NAAC with 'A' Grade)**  
**COIMBATORE 641 032**

**M.C.A. (COMPUTER APPLICATIONS)**

**(CHOICE BASED CREDIT SYSTEM)**

**Curriculum & Syllabus**

**2019-2020**

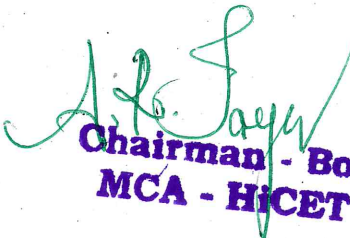

## VISION AND MISSION OF THE INSTITUTION

### VISION

To become a premier institution by producing professionals with strong technical knowledge, innovative research skills and high ethical values.

### MISSION

- To provide academic excellence in technical education through novel teaching methods.
- To empower students with creative skills and leadership qualities.
- To produce dedicated professionals with social responsibility.

  
**Chairman - BoS**  
**MCA - HICET**

  
**Dean (Academics)**  
**HICET**

## VISION AND MISSION OF THE DEPARTMENT

### VISION

Our Vision is to equip and enrich the young minds professionally through experience, understanding, learning & implementation and to raise the level of Employability, by enhancing the individual skill sets.

### MISSION

- To enhance Technical Knowledge through practical implementation.
- Inculcate culture, ethics and morality.
- To induce technical and analytical skills for societal benefits.

  
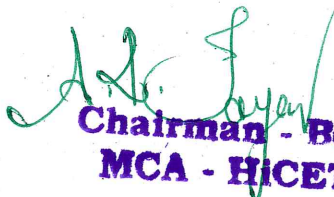

Chairman - BOS  
MCA - HICET

  
Dean (Academics)  
HICET

## PROGRAM OUTCOMES (POs)

- a. Ability to apply knowledge of mathematics, computer science and domain knowledge to solve problems in the computational world.
- b. Ability to evaluate, analyze and use available technological solutions to design and implement the same.
- c. Ability to work with complex computing problem environment, use knowledge both technical and research to provide valid conclusions of experiments based on analysis and interpretation of data.
- d. Ability to use/evaluate the various software tools and networking requirements for solutions.
- e. Ability to adhere to the professional ethics, follow cyber rules and regulations and be a responsible citizen.
- f. Ability to be a lifelong learner in the field of computer science.
- g. Ability to demonstrate the knowledge and understanding of hardware, software, networking and Finance requirements for the Society.
- h. Ability to communicate effectively with the fellow members and also with other uses of the computing community and society.
- i. Ability to experience the industrial environment for understanding the impact of computational solutions in a global and societal context.
- j. Ability to become leaders, entrepreneurs, and provide solutions to complex problems in life.

  
**Chairman - BoS  
MCA - HICET**

  
**Dean (Academics)  
HICET**

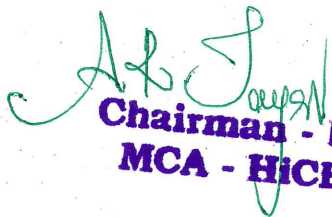

## GRADUATE ATTRIBUTES (PSOs)

- Knowledge of solving complex computing problems
- Independent learning for continual development.
- Societal and environmental concern.
- Individualism and Team work.

## PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

To produce graduates with the ability to

- Work productively as IT professional both at supportive and leadership roles.
- Advance successfully in their chosen career path utilizing technical abilities, leadership qualities, communication and interpersonal skills with high regard to legal and ethical responsibilities.
- Build their profession adapting to the changes in the technology with lifelong learning.

  
**Chairman - BoS**  
**MCA - HICET**

  
**Dean (Academics)**  
**HICET**

# **SYLLABUS**

| Programme | Course Code | Name of the Course                                | L | T | P | C |
|-----------|-------------|---|---|---|---|---|
| MCA       | 16MA1124    | MATHEMATICAL FOUNDATION FOR COMPUTER APPLICATIONS | 3 | 1 | 0 | 4 |

| Course Objective | Description   |
|------------------|---|
|                  | 1. To understand the concepts and operations of matrix algebra needed for computing graphics modeling.  |
|                  | 2. To understand and apply the class of functions which transform a finite set into another finite set which relates to input output functions in computer science. |
|                  | 3. To impart discrete knowledge in computer engineering through finite automata and Context free grammars   |

| Unit                             | Description   | Instructional hours |
|----------------------------------|---|---------------------|
| I                                | <b>MATRIX ALGEBRA</b><br>Matrices, Rank of Matrix - Eigen Values and Eigen Vectors - Inverse of a Matrix - Cayley Hamilton Theorem.   | 12                  |
| II                               | <b>BASIC SET THEORY AND RELATIONS</b><br>Basic Definitions - Venn Diagrams and set operations - Laws of set theory - Principle of inclusion and exclusion - Permutation and Combination - Relations - Properties of relations - Matrices of relations - Closure operations on relations.  | 12                  |
| III                              | <b>FUNCTIONS AND MATHEMATICAL LOGIC</b><br>Functions - injective, subjective and objective functions - Propositions and logical operators - Truth table - Propositions generated by a set, Equivalence and implication - Basic laws- Some more connectives - Functionally complete set of connectives- Normal forms - Proofs in Propositional calculus. | 12                  |
| IV                               | <b>FORMAL LANGUAGES</b><br>Languages and Grammars - Classification of Grammars - Context Free Grammars and Languages – Derivations.   | 12                  |
| V                                | <b>FINITE STATE AUTOMATA</b><br>Concepts of Automata Theory – Finite Automata – Types of finite Automata - Deterministic Finite State Automata(DFA), Non Deterministic Finite State Automata (NFA) – Transition Diagrams - Equivalence of DFA and NFA.  | 12                  |
| <b>Total Instructional hours</b> |   | <b>60</b>           |

| Course Outcome | Description   |
|----------------|---|
|                | CO1: Acquire the basic knowledge of matrix, set theory, functions and relations concepts needed for designing and solving problems.                                 |
|                | CO2: Acquire the knowledge of logical operations and predicate calculus needed for computing skill Able to design and solve Boolean functions for defined problems. |
|                | CO3: Apply the acquired knowledge of formal languages to the engineering areas like Compiler. Design  |
|                | CO4: Apply the acquired knowledge of finite automata theory and design discrete problems to solve by computers.   |

| <b>Total Instructional hours</b> |  | <b>45</b>           |

COURSE OUTCOME

CO1 : Able to design digital circuits by simplifying the Boolean functions.  
CO2 : Able to understand the organization and working principle of computer hardware components.  
CO3 : Able to understand mapping between virtual and physical memory.  
CO4 : Acquire knowledge about multiprocessor organization and parallel processing  
CO5 : Able to trace the execution of an instruction through the processor.

| Programme | Course Code | Name of the Course         | L | T | P | C |
|-----------|-------------|----------------------------|---|---|---|---|
| MCA       | 16CA1202    | FUNDAMENTALS OF WEB DESIGN | 3 | 0 | 0 | 3 |

- COURSE OBJECTIVE
1. To understand the concepts and architecture of the World Wide Web.
  2. To understand and practice mark up languages.
  3. To understand and practice embedded dynamic scripting on client side Internet Programming.
  4. To understand and practice web development techniques on client-side.
  5. To design a creative and dynamic website.

| Unit                             | Description  | Instructional hours |
|----------------------------------|--|---------------------|
| I                                | <b>INTRODUCTION TO WWW</b><br>Internet Standards – Introduction to WWW – WWW Architecture – SMTP – POP3 – File Transfer Protocol - Overview of HTTP, HTTP request – response — Generation of dynamic web pages.  | 9                   |
| II                               | <b>UI DESIGN</b><br>Markup Language (HTML): Introduction to HTML and HTML5 - Formatting and Fonts - Commenting Code – Anchors – Backgrounds – Images – Hyperlinks – Lists – Tables – Frames - HTML Forms.  | 9                   |
| III                              | <b>CASCADING STYLE SHEET (CSS)</b><br>The need for CSS, Introduction to CSS – Basic syntax and structure - Inline Styles – Embedding Style Sheets - Linking External Style Sheets – Backgrounds - Manipulating text - Margins and Padding - Positioning using CSS. | 9                   |
| IV                               | <b>SCRIPTING LANGUAGES</b><br>HTML – forms – frames – tables – web page design - JavaScript introduction – control structures – functions – arrays – objects – simple web applications.  | 9                   |
| V                                | <b>DYNAMIC HTML</b><br>Dynamic HTML – introduction – cascading style sheets – object model and collections – event model – filters and transition – data binding – data control – ActiveX control – handling of multimedia data.                                   | 9                   |
| <b>Total Instructional Hours</b> |  | <b>45</b>           |

- COURSE OUTCOME
- CO1: Explain the history of the internet and related internet concepts that are vital in understanding web development.
- CO2: Discuss the insights of internet programming and implement complete application over the web.
- CO3: Demonstrate the important HTML tags for designing static pages and separate design from content using Cascading Style sheet.
- CO4: Utilize the concepts of JavaScript
- CO5: Create and maintain responsive websites and employ strategies with user-centered design methodologies.

| Programme | Course Code | Name of the Course | L | T | P | C |
|-----------|-------------|--------------------|---|---|---|---|
| MCA       | 16CA1203    | PROGRAMMING IN C   | 3 | 0 | 0 | 3 |

- COURSE OBJECTIVE
1. To understand the basic concepts of problem solving approaches using C
  2. To develop optimal program structure using conditional and iterative control structures and functions.
  3. To design, implement, test, and apply the basic C programming concepts.
  4. Apply the techniques of structured (functional) decomposition to break a program into smaller pieces and describe the mechanics of parameter passing.

| UNIT                             | DESCRIPTION   | TOTAL INSTRUCTIONAL |
|----------------------------------|---|---------------------|
|                                  | <b>INTRODUCTION TO C LANGUAGE</b>   |                     |
| I                                | Overview of 'C' language - Constants, Variables and Data Types - Operators, Expressions and Assignment statements - Managing Input/Output Operations - Formatted I/O - Decision Making - Branching - IF, Nested IF - Switch - goto - Looping- While, do, for statements | 9                   |
|                                  | <b>ARRAYS AND FUNCTIONS</b>   |                     |
| II                               | Arrays - dynamic and multi-dimensional arrays - Character arrays and Strings - Two dimensional character arrays - String handling Functions - User defined Functions - Categories of Functions – Recursion - Functions using Arrays, Storage Classes                    | 9                   |
|                                  | <b>STRUCTURES AND UNIONS</b>  |                     |
| III                              | Basics of Structures-Declaring a Structure - Array of Structures –Nested Structures- Passing Structures elements to Functions- Passing entire Structure to Function - Structures within Structures-Union-typedef and enumeration types-bit fields.                      | 9                   |
|                                  | <b>POINTERS</b>   |                     |
| IV                               | Pointers - Declaration, Accessing a variable, dynamic memory allocation, Pointers versus Arrays, Array of pointers, Pointers & Strings, Pointers to functions and structure Pointers, Pointer to Pointer  | 9                   |
|                                  | <b>FILE MANAGEMENT</b>  |                     |
| V                                | File Management in C - Data hierarchy- Files and Streams - Sequential access file- Random access file – Preprocessors, Command Line Arguments   | 9                   |
| <b>Total Instructional hours</b> |   | <b>45</b>           |

- COURSE OUTCOME
- CO1: Able to design a computational solution for a given problem.  
CO2:Able to break a problem into logical modules that can be solved (programmed).  
CO3:Able to transform a problem solution into programs involving programming constructs  
CO4:Able to write programs using structures, strings, arrays, pointers and files for solving complex computational problem.  
CO5:Able to introduce modularity using functions and pointers which permit ad hoc run-time polymorphism

|-----------|-------------|-----------------------------|---|---|---|---|
| MCA       | 16CA1204    | DATABASE MANAGEMENT SYSTEMS | 3 | 0 | 0 | 3 |

- COURSE OBJECTIVE
1. To understand the fundamentals of data models and conceptualize and depict a database system using ER diagram
  2. To make a study of SQL and relational database design
  3. Understand and successfully apply logical database design principles, including E-R diagram and database normalization
  4. To know about the data storage techniques and query processing
  5. To impart knowledge in transaction processing, concurrency control techniques and recovery procedures

| Unit                             | Description  | Instructional hours |
|----------------------------------|--|---------------------|
|                                  | <b>INTRODUCTION</b>  |                     |
| I                                | Purpose of Database Systems – view of Data – Database languages – Database Architecture – Database users and Administrators – Database Schema – Keys – Relational Algebra – Tuple Relational Calculus  | 9                   |
|                                  | <b>SQL, PROGRAMMING AND TRIGGERS</b>   |                     |
| II                               | SQL Data Definition – Basic Structure of SQL QUERIES – Basic Operations – Aggregate Functions – Nested Sub queries – Join Expressions – Views – Transactions – Functions and Procedures – Triggers.  | 9                   |
|                                  | <b>NORMAL FORMS</b>  |                     |
| III                              | Entity-Relationship – Basic Concepts – Constraints – Removing attributes in Entity sets – ER Diagram – First Normal Forms – Second Normal Form – Third normal Form – Boyce Codd Normal Forms.  | 9                   |
|                                  | <b>DATA STORAGE AND INDEXING</b>   |                     |
| IV                               | Storage and File Structure: Physical Storage media – Magnetic Disk and Flash Storage – RAID – File organization – Organization of records in File – Indexing and Hashing: Basic Concepts – Ordered Indices – B+Tree Index Files – Multiple Key Access – Static Hashing – Dynamic Hashing | 9                   |
|                                  | <b>TRANSACTION MANAGEMENT</b>  |                     |
| V                                | Transaction Concept and Model – Transaction Atomicity and Durability – Transaction isolation – Serializability – Transaction Isolation and Atomicity – Concurrency control : Lock-based Protocols – Deadlock Handling.   | 9                   |
| <b>Total Instructional hours</b> |  | <b>45</b>           |

- Course outcome
- CO1: Understand the basic concepts of the database and data models.  
CO2: Design a Database using ER diagrams and map ER into Relations and normalize the relations  
CO3: Acquire the knowledge of query evaluation to monitor the performance of the DBMS.  
CO4: Develop a simple database applications using normalization.  
CO5: Acquire the knowledge about different special purpose database and to critique how they differ from traditional database systems

| Programme | Course Code | Name of the Course    | L | T | P | C |
|-----------|-------------|-----------------------|---|---|---|---|
| MCA       | 16CA1001    | WEB DESIGN LABORATORY | 0 | 0 | 4 | 2 |

- COURSE OBJECTIVE
- To be familiar with elements, Tags and Basic structure of HTML files.
  - To develop the concept of basic and advanced text formatting.
  - To designing of webpage-Document Layout, Working with List, Working with Tables.
  - To work with List, HTML elements box, Positioning and Block properties in CSS.
  - To know the usage of JavaScript for validation.

| S.no                             | Description of the experiments   | Practical hours |
|----------------------------------|--|-----------------|
| 1                                | Create a web page with the following using HTML<br>(i). To embed an image map in a web page.<br>(ii). To fix the hot spots.<br>(iii). Show all the related information when the hot spots are clicked. | 6               |
| 2                                | Create a web page with all types of Cascading style sheets.  | 3               |
| 3                                | Implement Client Side Scripts for Validating Web Form Controls using JavaScript.   | 3               |
| 4                                | Designing Quiz Application Personal Information System/ Using JavaScript<br>Develop and demonstrate a HTML file that includes JavaScript that uses functions for the following problems:               | 3               |
| 5                                | (i). Parameter: A string<br>Output: The position in the string of the left-most vowel.<br>(ii). Parameter: A number<br>Output: The number with its digits in the reverse order.                        | 3               |
| 6                                | Write an HTML code to display your CV on a web page.   | 3               |
| 7                                | Write an HTML code to create a Home page having three links: About Us, Our Services and Contact Us. Create separate web pages for the three links.   | 6               |
| 8                                | Write an HTML code to create a Registration Form. On submitting the form, the user should be asked to login with this new credentials.   | 6               |
| 9                                | Write an HTML code to create your Institute website, Department website and Tutorial website for specific object.  | 6               |
| 10                               | Write an HTML code to create a frameset having header, navigation and content sections.  | 6               |
| <b>Total Instructional hours</b> |  | <b>45</b>       |

- COURSE OUTCOME
- CO1: Design and develop basic web pages using HTML and CSS.  
CO2: Use graphics in Web pages.  
CO3: Use tables in Web pages.  
CO4: Link pages to create a Web site.  
CO5: Design and develop web pages using CSS for layout

|-----------|-------------|-----------------------------|---|---|---|---|
| MCA       | 16CA1002    | PROGRAMMING IN C LABORATORY | 0 | 0 | 4 | 2 |

- COURSE OBJECTIVE
1. Understand the basic concepts of C programming, its data types
  2. Practice the use of conditional and looping statements
  3. Implement programs based on structures, unions, enumerations
  4. Implement arrays, functions and pointers
  5. Gain skills to handle strings and files

| S.no                             | Description of the experiments  | Practical hours |
|----------------------------------|---|-----------------|
| 1                                | Programs to understand the concept of data types and expressions                  | 3               |
| 2                                | Conditional and control statements  | 6               |
| 3                                | Arrays-Single and Multi dimensional arrays  | 6               |
| 4                                | Defining and Handling of Strings  | 6               |
| 5                                | Implementation of functions and recursive functions                               | 6               |
| 6                                | Structures, array of structures and Union   | 6               |
| 7                                | Implementation of pointers, operation on pointers and dynamic storage allocations | 6               |
| 8                                | Creating and processing data files  | 6               |
| <b>Total Instructional hours</b> |   | <b>45</b>       |

- Course Outcome
- CO1: To know the concepts of Problem Solving  
CO2: To demonstrate the ability to analyze, use, and create user defined functions.  
CO3: To demonstrate the ability to understand and use Pointers  
CO4: To demonstrate the ability to understand and use Exception handling and I/O  
CO5: To design and write programs in C Language using Arrays, Structures and Unions and to create diversified applications in C.

| Programme | Course Code | Name of the Course | L | T | P | C |
|-----------|-------------|--------------------|---|---|---|---|
| MCA       | 16CA1003    | DBMS LABORATORY    | 0 | 0 | 4 | 2 |

- COURSE OBJECTIVE
1. To give a good formal foundation on the relational model of data
  2. To develop conceptual understanding of database management system
  3. To understand how a real world problem can be mapped to schemas
  4. To develop understanding of different applications and constructs of SQL, PL/SQL.
  5. To introduce the concepts of transactions and transaction processing

| S.no                             | Description of the experiments  | practical hours |
|----------------------------------|---|-----------------|
| 1                                | Execute a DDL, DML, DCL and TCL commands for a Table                                    | 3               |
| 2                                | Execute SQL Functions   | 3               |
| 3                                | Execute various Joins an Sub Queries  | 3               |
| 4                                | Create and Manipulate various DB Objects for a Table                                    | 3               |
| 5                                | Write PL/SQL Procedure for an application using Exception Handling                      | 3               |
| 6                                | Write PL/SQL Procedure for an application using Cursors.                                | 6               |
| 7                                | Write a PL/SQL program to prepare reports for an application using Functions.           | 6               |
| 8                                | Write a PL/SQL block for transaction operations of a typical application using Triggers | 6               |
| 9                                | Write a PL/SQL block for transaction operations of a typical application using Packages | 6               |
| 10                               | Design and develop an application using any Front end and Back end tool.                | 6               |
| <b>Total Instructional hours</b> |   | <b>45</b>       |

- COURSE OUTCOME
- CO1: Ability to create database Tables  
CO2: Ability to formulate SQL queries based on the problems given  
CO3: Ability to apply PL/SQL  
CO4: Ability to declare and enforce integrity constraints on a database  
CO5: Ability to Normalize the database.

- R6. Turton, N.D and Heaton, J.B, **Dictionary of Common Errors**, Addison Wesley Longman Ltd., Indian reprint 1998.

### Guidelines for the course

1. A batch of 60 students is divided into two groups – one group for the PC- based session and the other group for the Class room session.
2. The English Lab (2 Periods) and the Career Lab (2 Periods) may be handled by any competent teacher
3. **Record Notebook:** At the end of each session of English Lab, review exercises are given for the students to answer and the computer evaluated sheets are to be compiled as record notebook. Similar exercises for the career lab are to be compiled in the record notebook.
4. **Internal Assessment:** The 15 marks (the other 5 marks for attendance) allotted for the internal assessment will be based on the record notebook compiled by the candidate. 10 marks may be allotted for English Lab component and 5 marks for the Career Lab component.
5. **End semester Examination:** The end-semester examination carries 40% weightage for English Lab and 60% weightage for Career Lab.

Course Outcome

- CO1: Display competence in oral, written, and visual communication.
- CO2: Show an understanding of opportunities in the field of communication.
- CO3: Communicate ethically.
- CO4: Demonstrate positive group communication exchanges.
- CO5: Apply appropriate communication skills across settings, purposes, and audiences.
- CO6: Build and maintain healthy and effective relationships.

|      | <b>SOFTWARE DESIGN</b>  |                     |
| II   | Abstraction – Modularity – Software Architecture – Cohesion – Coupling- Various Design Concepts and notations – Documentation – Dataflow Oriented design – Jackson System development.                                | 9                   |
|      | <b>SOFTWARE TESTING AND MAINTENANCE</b>   |                     |
| III  | Software Testing Fundamentals – Software testing strategies – Black Box Testing – White Box Testing – System Testing – Testing Tools – Test Case Management – Software Maintenance Organization – Maintenance Report. | 9                   |
|      | <b>SOFTWARE METRICS</b>   |                     |
| IV   | Scope – Classification of metrics – Measuring Process and Product attributes – Direct and Indirect measures – Cost Estimation – Reliability – Software Quality Assurance – Standards.                                 | 9                   |
|      | <b>SCM &amp; WEB ENGINEERING</b>  |                     |
| V    | Need for SCM – Version Control – SCM Process – Software Configuration Items – Taxonomy – CASE Repository.   | 9                   |
|      | <b>Total Instructional hours</b>  | <b>45</b>           |

- COURSE OUTCOME
- CO1: Get an insight into the processes of software development  
CO2: Able to understand the problem domain for developing SRS and various models of software engineering.  
CO3: Able to Model software projects into high level design using DFD, UML Diagram.  
CO4: Able to Measure the product and process performance using various metrics  
CO5: Able to Evaluate the system with various testing techniques and strategies.

|-----------|-------------|--------------------|---|---|---|---|
| MCA       | 16CA2202    | OPERATING SYSTEMS  | 3 | 0 | 0 | 3 |

- COURSE OBJECTIVE**
- To be aware of the evolution and fundamental principles of operating system, processes and their communication
  - To understand the various operating system components like process management, memory management, process management and device management.
  - To know about file management and the distributed file system concepts in operating systems
  - To be aware of components of operating system with relevant case study.

| <b>Total Instructional hours</b> |   | <b>45</b>           |

- Course Outcome**
- CO1: Able to understand the operating system components and its services  
CO2: Implement the algorithms in process management and solving the issues of IPC  
CO3: Able to demonstrate the mapping between the physical memory and virtual memory  
CO4: Able to understand file handling concepts in OS perspective  
CO5: Able to understand the operating system components and services with the recent OS.

|-----------|-------------|-----------------------------|---|---|---|---|
| MCA       | 16CA2203    | OBJECT ORIENTED PROGRAMMING | 3 | 0 | 0 | 3 |

- COURSE OBJECTIVE
- To learn the fundamental concepts of Object oriented Programming
  - To learn how C++ supports Object Oriented principles such as abstraction, polymorphism etc
  - To understand and apply the principles hiding, localization and modularity in software development.
  - Use the generic programming features of C++ including the STL
  - Design and implement reliable and maintainable object-oriented applications of moderate complexity composed of several classes

| Unit                             | Description   | Instructional hours |
|----------------------------------|---|---------------------|
|                                  | <b>FUNDAMENTALS</b>   |                     |
| I                                | Object Oriented Programming concepts - Encapsulation - Programming Elements - Program Structure - Enumeration Types - Functions and Pointers - Function Invocation - Overloading Functions - Scope and Storage Class - Pointer Types - Arrays and Pointers - Call by Reference - Assertions.                          | 8                   |
|                                  | <b>IMPLEMENTING ADTS AND ENCAPSULATION</b>  |                     |
| II                               | Structure Pointer Operators - Unions - Bit Fields - Data Members and Member Functions - Classes - Constructors and Destructors - Copy Constructors - Inline Functions - Static Members and Member Functions- Friend Function and Friend Class - this Pointer - Constness - implementation of simple ADTs - Namespace. | 10                  |

| <b>Total Instructional hours</b> |   | <b>45</b>           |

- COURSE OUTCOME
- CO1: Able to understand and design the solution to a problem using object-oriented programming concepts.
- CO2: Able to use proper class protection mechanism to provide security.
- CO3: Able to demonstrate the use of virtual functions to implement polymorphism.
- CO4: Understand and implement the features of C++ including templates, exceptions and file handling for providing programmed solutions to complex problems
- CO5: Able to reuse the code with extensible Class types, User-defined operators and function overloading

| <b>Total Instructional hours</b> |   | <b>45</b>           |

- COURSE OUTCOME**
- C01: Able to prove the correctness and analyze the running time of the basic algorithms for those classic problems in various domains.  
C02: Able to apply the algorithms and design techniques to solve problems.  
C03: Able to apply prior knowledge of standard algorithms to solve new problems, and mathematically evaluate the quality of the solutions.  
C04: Able to produce concise technical writing for describing the solutions and arguing their correctness.  
C05: Able to analyze the complexities of various problems in different domains.

|-----------|-------------|-------------------------|---|---|---|---|
| MCA       | 16CA2205    | DATA STRUCTURES USING C | 3 | 0 | 0 | 3 |

- COURSE OBJECTIVE**
1. To understand the linear and non linear data structure available in solving problems.
  2. To know about the sorting and searching techniques and its efficiencies
  3. Identify different solutions for a given problem; analyze advantages and disadvantages to different solutions.
  4. To study the systematic way of solving problems, various methods of organizing large amounts of data
  5. To employ the different data structures to find the solutions for specific problem.

| Unit | Description  | Instructional hours |
|------|--|---------------------|
|      | <b>INTRODUCTION AND LIST</b>   |                     |
| I    | Introduction – Overview – How to create programs and analyze them – Abstract Data Types ((ADT) – Arrays and its representation – Structures – Ordered Lists - Representation of Arrays – Simple applications.  | 9                   |
|      | <b>STACKS AND QUEUES</b>   |                     |
| II   | Stacks: Operations on stacks - Applications of Stack – Polish Expression and their Compilation using Stacks – infix to postfix conversion – evaluation of Expression – Queues : Representation of Queues, Operation on Queues - Priority Queues – Applications on Queue.   | 9                   |
|      | <b>LINEAR DATA STRUCTURE</b>   |                     |
| III  | Linear Linked List: Operations on Linear List using singly Linked Storage structures - Circular linked lists. Doubly linked list - Polynomial manipulation using linked list – garbage collection and compaction using linked list   | 9                   |
|      | <b>NON LINEAR DATA STRUCTURE</b>   |                     |
| IV   | Trees: Need for non linear structures – Tress and its representation – Binary Tree – Operations on binary tree – Binary tree traversal – Huffman Algorithm – Binary search tree. Graphs s: Representation of graph – Matrix representation of graphs – list structures – Graph Traversals – Breadth first search – Depth first search – Shortest path Algorithm. | 9                   |
|      | <b>SEARCHING AND SOTING</b>  |                     |
| V    | General Background – Exchange sorts – Selection and Tree Sorting – Insertion Sorts – Merge and Radix Sort – Heap Sort – Shell Sort – External Sort – Basic Search Techniques – Tree Searching – General Search Trees – Hashing.  | 9                   |
|      | <b>Total Instructional hours</b>   | <b>45</b>           |

- COURSE OUTCOME**
- CO1: Able to understand the concepts of data structure, data type and array data structure  
CO2: Able to analyze algorithms and determine their time complexity  
CO3: Able to implement linked list data structure to solve various problems  
CO4: Able to understand and apply various data structures such as stacks, queues, trees and graphs to solve various computing problems using C.  
CO5: Able to design and apply appropriate data structure for solving computing problems

| 7                                | Write a Program to illustrate Static member and methods   | 3               |
| 8                                | Write a Program to illustrate Bit fields  | 3               |
| 9                                | Write a Program to overload as binary operator, friend and member function  | 3               |
| 10                               | Write a Program to overload unary operator in Postfix and Prefix form as member and friend function   | 3               |
| 11                               | Write a Program to illustrate Iterators and Containers  | 3               |
| 12                               | Write a C++ Program to illustrate function templates  | 3               |
| 13                               | Write a C++ Program to illustrate Class templates   | 3               |
| 14                               | Write C++ Programs and incorporating various forms of Inheritance   | 3               |
| 15                               | Write a C++ Program to illustrate Virtual functions   | 3               |
| 16                               | Write a C++ program to illustrate Exception Handling  | 3               |
| 17                               | Write a C++ program to demonstrate the concept of I/O Streams   | 3               |
| <b>Total Instructional hours</b> |   | <b>45</b>       |

- Course Outcome
- CO1: To apply object-oriented programming features to program design and implementation  
CO2: To demonstrate the ability to analyze, use, and create functions, classes, to overload operators.  
CO3: To demonstrate the ability to understand and use inheritance and Pointers when creating or using classes and create templates  
CO4: To demonstrate the ability to understand and use Exception handling and I/O Streams  
CO5: To design and write programs that make appropriate use of advanced object-oriented facilities common to many object-oriented languages such as classes, message passing, overloading and inheritance.

| <b>Total Instructional hours</b> |  | <b>45</b>       |

- COURSE OUTCOME**
- CO1: Able to demonstrate a familiarity with major algorithms and data structures.  
CO2: Able to apply important algorithmic design paradigms and methods of analysis.  
CO3: Analyze worst-case running times of algorithms using asymptotic analysis.  
CO4: Synthesize divide-and-conquer algorithms, Derive and solve recurrences describing the performance of divide-and-conquer algorithms.  
CO5: Able to implement the dynamic-programming paradigm.

|-----------|-------------|----------------------------|---|---|---|---|
| MCA       | 16CA2003    | DATA STRUCTURES LABORATORY | 0 | 0 | 4 | 2 |

- COURSE OBJECTIVE
1. To develop skills to design and analyze simple linear and non linear data structures
  2. To Strengthen the ability to identify and apply the suitable data structure for the given real world problem
  3. To Gain knowledge in practical applications of data structures
  4. To analyze performance of Algorithm
  5. To use appropriate searching and sorting methods.

| S.NO                             | DESCRIPTION OF THE EXPERIMENTS  | TOTAL PRACTICAL HOURS |
|----------------------------------|---|-----------------------|
| 1                                | Program for adding two Polynomials.   | 3                     |
| 2                                | Program for implementing Stack operations.  | 3                     |
| 3                                | Program for implementing Queue operation.   | 3                     |
| 4                                | Implementation of circular Queue.   | 3                     |
| 5                                | Program for operations on Single Linked List.   | 3                     |
| 6                                | Program for inserting and deleting elements in Double Linked List.                            | 3                     |
| 7                                | Program to implement Towers of Hanoi Problem.   | 3                     |
| 8                                | Program to Convert an infix expression to postfix.  | 3                     |
| 9                                | Program to sort elements in using sorting techniques.   | 3                     |
| 10                               | Program to search an element using the search techniques.                                     | 6                     |
| 11                               | Program to perform depth first search and breath first search using graph.                    | 6                     |
| 12                               | Program to perform tree traversal (In-order, pre-order, post-order) using binary search tree. | 6                     |
| <b>Total Instructional hours</b> |   | <b>45</b>             |

- COURSE OUTCOME
- CO1: To learn elementary data structures such as stacks, queues, linked lists, trees and graphs.  
CO2: To design and analyze the time and space efficiency of data structure.  
CO3: To identify the appropriate data structure for given problem.  
CO4: To have practical knowledge on the applications of data structures.  
CO5: To design algorithms to solve the problems.

#### RECORD LAY OUT

- Every student has to maintain a record in which he / she have to incorporate the following details.
- Students have to collect materials related to topics for Group Discussion / Debate
- 10 assignments of Lab observations related to Presentation Skills about 200 words each
- Covering letter with Bio data / Resume / Curriculum Vitae

  
Chairman - BoS  
MCA - HICET

  
Dean (Academics)  
HICET

5. Paper Presentation Topics with source materials to be pasted in the record

COURSE OUTCOME

- CO1: Display competence in oral, written, and visual communication.
- CO2: Show an understanding of opportunities in the field of communication.
- CO3: Communicate ethically.
- CO4: Demonstrate positive group communication exchanges.
- CO5: Apply appropriate communication skills across settings, purposes, and audiences.
- CO6: Build and maintain healthy and effective relationships

  
Chairman - BoS  
MCA - HICET

  
Dean (Academics)

# **SYLLABUS**

| Programme | Course Code | Name of the Course       | L | T | P | C |
|-----------|-------------|--------------------------|---|---|---|---|
| MCA       | 16BA3251    | ORGANIZATIONAL BEHAVIOUR | 3 | 0 | 0 | 3 |

- Course Objective
1. To understand the focus, purpose and importance of organizational behaviour.
  2. To understand the various aspects related to individuals behaviour in an organization.
  3. To comprehend the formation of organization structure and the influence and role of Groups in organisation
  4. To expose the students to various leadership styles and the influence of Power and politics in organization.
  5. To know the dynamics of organizational behaviour.

| Unit | Description   | Instructional Hours |
|------|---|---------------------|
|      | <b>FOCUS AND PURPOSE</b>  |                     |
| I    | Definition, need and importance of organizational behaviour – Nature and scope – Frame work – Organizational behaviour models.  | 5                   |
|      | <b>INDIVIDUAL BEHAVIOUR</b>   |                     |
| II   | Personality – types – Factors influencing personality – Theories – Learning – Types of learners – The learning process – Learning theories – Organizational behaviour modification. Misbehaviour – Types – Management Intervention. Emotions - Emotional Labour – Emotional Intelligence – Theories. Attitudes – Characteristics – Components – Formation – Measurement- Values. Perceptions – Importance – Factors influencing perception – Interpersonal perception- Impression Management. Motivation – importance – Types – Effects on work behavior. | 12                  |
|      | <b>GROUP BEHAVIOUR</b>  |                     |
| III  | Organization structure – Formation – Groups in organizations – Influence – Group dynamics – Emergence of informal leaders and working norms – Group decision making techniques – Team building - Interpersonal relations – Communication – Control.   | 10                  |
|      | <b>LEADERSHIP AND POWER</b>   |                     |
| IV   | Meaning – Importance – Leadership styles – Theories – Leaders Vs Managers – Sources of power – Power centers – Power and Politics.  | 8                   |
|      | <b>DYNAMICS OF ORGANIZATIONAL BEHAVIOUR</b>   |                     |
| V    | Organizational culture and climate – Factors affecting organizational climate – Importance. Job satisfaction – Determinants – Measurements – Influence on behavior. Organizational change – Importance – Stability Vs Change – Proactive Vs Reaction change – the change process – Resistance to change – Managing change. Stress – Work Stressors – Prevention and Management of stress – Balancing work and Life. Organizational development – Characteristics – objectives – Organizational effectiveness  | 10                  |
|      | <b>Total Instructional Hours</b>  | <b>45</b>           |

- Course Outcome
- CO1: Students will be familiar with the features and importance of organizational behaviour.  
CO2: Can recognize aspects like personality, learning, emotions, attitudes, perceptions, motivation etc which will affect individual's behaviour in an organization.  
CO3: Enables to understand and handle group behaviour effectively.  
CO4: Gives an understanding on various leadership styles and the influence of Power and Politics in organization.  
CO5: Ensures to have a better understanding on the dynamics of organizational behaviour.

| Programme | Course Code | Name of the Course | L | T | P | C |
|-----------|-------------|--------------------|---|---|---|---|
| MCA       | 16CA3201    | COMPUTER NETWORKS  | 3 | 0 | 0 | 3 |

Course Objective

- To understand networking concepts and basic communication model
- To understand network architectures and components required for data communication.
- To analyze the function and design strategy of physical, data link, network layer and transport layer
- To acquire knowledge of various application protocol standard developed for Internet
- To understand various security algorithms over application layer

| Unit | Description   | Instructional Hours |
|------|---|---------------------|
|      | <b>NETWORK FUNDAMENTALS</b>   |                     |
| I    | Uses of Networks – Categories of Networks -Communication model –Data transmission concepts and terminology – Protocol architecture – Protocols – OSI – TCP/IP – LAN Topology - Transmission media           | 9                   |
|      | <b>DATA LINK LAYER</b>  |                     |
| II   | Data link control - Flow Control – Error Detection and Error Correction - MAC – Ethernet, Token ring, Wireless LAN MAC – Blue Tooth - Bridges.  | 9                   |
|      | <b>NETWORK LAYER</b>  |                     |
| III  | Network layer – Switching concepts – Circuit switching – Packet switching –IP – Data grams – IP addresses- IPV6– ICMP – IGMP - Routing Protocols – Distance Vector – Link State- BGP.                       | 9                   |
|      | <b>TRANSPORT LAYER</b>  |                     |
| IV   | Transport layer –service –Connection establishment – Flow control – Transmission control protocol – Congestion control and avoidance – User datagram protocol. -Transport for Real Time Applications (RTP). | 9                   |
|      | <b>APPLICATION LAYER</b>  |                     |
| V    | Applications - DNS- SMTP – WWW –SNMP- Security –threats and services - DES- RSA- web security –SSL  | 9                   |
|      | <b>Total Instructional Hours</b>  | <b>45</b>           |

Course Outcome

- CO1: Understand the basic concepts in computer networking.
- CO2: Apply the functions of different layers and in depth knowledge of datalink layer.
- CO3: Analyze the different protocols and network layer components.
- CO4: Identify the basic functions of transport layer and congestion in networks.
- CO5: Explain the working of application layer.

|-----------|-------------|------------------------------|---|---|---|---|
| MCA       | 16CA3202    | COMPILER DESIGN AND ANALYSIS | 3 | 0 | 0 | 3 |

| COURSE OBJECTIVE |  |
|------------------|--|
|                  | 1. To introduce the major concept areas of language translation and compiler design. |
|                  | 2. To enrich the knowledge in various phases of compiler and its use                 |
|                  | 3. To extend the knowledge of parser   |
|                  | 4. To develop an awareness on code optimization techniques, machine code generation  |
|                  | 5. To provide practical programming skills necessary for constructing a compiler     |

| Unit | Description  | Instructional Hours |
|------|--|---------------------|
|      | <b>INTRODUCTION</b>  |                     |
| I    | Language Processors – Structure of a compiler -The phases of a compiler- Cousins of the compiler-The grouping of phases-Compiler-construction tools. Simple syntax-directed translation : Introduction -Syntax definition-Syntax-directed translation-Parsing –A translator for simple expressions-Lexical analysis. | 9                   |
|      | <b>LEXICAL ANALYSIS</b>  |                     |
| II   | The role of the lexical analyzer-Input buffering-Specification of tokens-Recognition of tokens-A language for specifying lexical analyzers-Finite automata-From a regular expression to an NFA-Design of a lexical analyzer generator-Optimization of DFA -based pattern matchers.                                   | 9                   |
|      | <b>SYNTAX ANALYSIS</b>   |                     |
| III  | Introduction: The role of the parser-Context-free grammars-Writing grammar-Top down parsing-Bottom-up parsing-Operator-precedence parsing-LR parsers-Using ambiguous grammars-Parser generators.   | 9                   |
|      | <b>INTERMEDIATE CODE GENERATION</b>  |                     |
| IV   | Variants of Syntax Tree – Three Address Code – Types and Declarations – Type checking – Rules of type checking – Type Conversion – Control Flow – Back patching  | 9                   |
|      | <b>CODE GENERATION</b>   |                     |
| V    | Issues in the Design of a Code Generator – The Target Language – Addresses in the Target Code – Basic Blocks and Flow Graphs – Optimization of Basic Blocks - A Simple Code Generator – DAG Representation of Basic Blocks – Peephole Optimization – Code Generation from DAG- Register Allocation and Assignment    | 9                   |
|      | <b>Total Instructional Hours</b>   | 45                  |

| Course Outcome |   |
|----------------|---|
|                | CO1: To Acquire the knowledge of compiler & its features  |
|                | CO2: To Understand the role of a lexical analyzer and identify and design top down and bottom up Parsing techniques |
|                | CO3: To Construct a syntax tree and generate three address codes  |
|                | CO4: To Compare flow graphs and basic blocks and write efficient codes using peephole optimization                  |
|                | CO5:To Implement various optimization and code generation algorithms for the design of a compiler                   |

|-----------|-------------|--------------------|---|---|---|---|
| MCA       | 16CA3203    | JAVA PROGRAMMING   | 3 | 0 | 0 | 3 |

- Course Objective
- To impart the fundamental concepts of core JAVA.
  - To explain the concepts of Multithreading
  - To explore the skills in program development using Exception handling and I/O programming
  - To gain the built in knowledge of standalone and web applications.
  - To understand the concepts needed for database connectivity.

| Unit                             | Description   | Instructional Hours |
|----------------------------------|---|---------------------|
| I                                | <b>INTRODUCTION</b><br>Java Features – The Byte Code – Lexical issues - Class Fundamentals – Objects – Overloading Methods – Passing and returning objects – Recursion – Controlling access to members – this keyword - static and final keyword..  | 9                   |
| II                               | <b>INHERITANCE &amp; PACKAGES</b><br>Nested classes – Inheritance – Using super keyword – Multi Level hierarchy – Method Overriding - Dynamic Method Dispatch – The Object class – Abstract classes - Packages – Access modifiers – Importing packages – Interfaces – Applying interfaces.  | 9                   |
| III                              | <b>EXCEPTION HANDLING &amp; THREADS</b><br>Exception handling – Using try catch – Nested try- throw – throws – finally – Built in exceptions – user defined exceptions - Chained exceptions; Threads – Thread model – Creating a thread – Thread priorities – Synchronization – Multithreading – Suspending, resuming and stopping threads. | 9                   |
| IV                               | <b>FRAMES &amp; APPLETS</b><br>Java Frame – basic GUI components – Delegation event model - Event Classes– Source of events – Event Listener Interface – Applet Programming.  | 9                   |
| V                                | <b>FILES &amp; DATABASES</b><br>I/O streams – Reading/Writing console – Files - Manipulating Databases with JDBC – Case Study on System class and Utility classes.  | 9                   |
| <b>Total Instructional Hours</b> |   | <b>45</b>           |

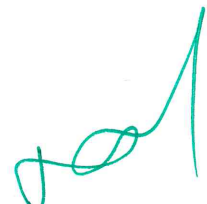

- Course Outcome
- CO1: Apprehend the syntax, semantics of Java programming language and create applications using classes and objects  
CO2: Design and create new applications by applying reusability and Packages concept  
CO3: Apply Multithreading concepts to execute parallelism and explore the concept of Exception handling.  
CO4: Implement programs using Frames, Event handlers and Applets  
CO5: Synthesize rich applications using I/O, Files, JDBC and System/Utility classes

1. Understand the fundamentals of graphics and multimedia.
  2. Gain knowledge in the concepts of 2D and 3D graphics programming.
  3. Acquire skills related to multimedia compression and animation
  4. Formulate a working definition of interactive multimedia;
  5. provides an idea of multimedia authoring and presentations

| Unit | Description   | Instructional Hours |
|------|---|---------------------|
|      | <b>2D PRIMITIVES</b>  |                     |
| I    | Output primitives- Line drawing , Circle drawing and Ellipse drawing algorithms - Attributes of output primitives - Two dimensional Geometric transformations – Basic Transformation – Matrix representations – Composite transformations – Other transformations - Two dimensional viewing - Cohen-Sutherland Line Clipping, Sutherland Hodgeman Polygon clipping algorithms | 9                   |
|      | <b>3D CONCEPTS</b>  |                     |
| II   | Parallel and Perspective projections - Three dimensional object representation - Polygon, Curved lines, Quadric surfaces – Spline Representations - 3D transformations - Viewing – Projections -Visible surface Identification – Classification of Visible Surface Detection Algorithms – Back face detection – Depth Buffer Method – A Buffer Method.                        | 9                   |
|      | <b>COLOR MODELS AND COLOR APPLICATIONS</b>  |                     |
| III  | Color Models - RGB, YIQ, CMY, HSV - Animations - General Computer Animation, Raster, Key frame .  | 9                   |
|      | <b>MULTIMEDIA BASICS</b>  |                     |
| IV   | Introduction and definitions – Multimedia Authoring Systems – Multimedia Authoring – Editing and Authoring tools – VRML – Graphics and Image Representation   | 9                   |
|      | <b>MULTIMEDIA SYSTEMS</b>   |                     |
| V    | Compression -Types of Compressions: Lossless - Lossy - Video compression - Image Compression standards – JPEG standard –JPEG 2000 –JPEG LS standard   | 9                   |
|      | <b>Total Instructional Hours</b>  | <b>45</b>           |

- Course Outcome
- CO1: Demonstrate 2D transformation using 2D primitives.
  - CO2: Implement 3D projections and transformations.
  - CO3: Identify the different color models.
  - CO4: Understand the basics of multimedia.
  - CO5: Illustrate the multimedia authoring systems and compression types

S.No

**Description Of The Experiments**

- 1 Practicing the different types of case tools such as (Rational Rose & other Open Source) used for all the phases of Software development life cycle.
- 2 Implementation of the Data modeling using CASE Workbenches and develop online railway reservation system.
- 3 Implementation of the Data modeling using CASE Workbenches for Library management system.
- 4 Implementation of the Project management using CASE Workbenches and develop Payroll processing application.
- 5 Implementation of the Source code generators using CASE Workbenches and develop Inventory system
- 6 Implementation of the Source code generators using CASE Workbenches for Payroll system
- 7 Implementation of the User-interface development using CASE Workbenches and develop Library management system
- 8 Implementation of the Programming using CASE Workbenches and Create a dictionary
- 9 Implementation of the Verification and validation using CASE Workbenches for Payroll system
- 10 Implementation of the Verification and validation using CASE Workbenches for Library management system

**Total Instructional Hours** 45

Course Outcome CO1: Ability to identify the minimum requirements for the development of application.  
CO2: Ability to develop, maintain, efficient, reliable and cost effective software solutions.  
CO3: Ability to critically thinking and evaluate assumptions and arguments.

**Software required:**

- **Languages:** C/C++/Java/JSDK/Web browser.
- Any front end tool (like VB, VC++) etc
- Any backend tool (Oracle, Ms-Access, SQL) etc.
- Any CASE tool (Rational Rose or other Open Source)

  
**Chairman - BoS**  
MCA - HICET

  
**Dean (Academics)**  
HICET

| Programme | Course Code | Name of the Course          | L | T | P | C |
|-----------|-------------|-----------------------------|---|---|---|---|
| MCA       | 16CA3002    | JAVA PROGRAMMING LABORATORY | 0 | 0 | 4 | 2 |

- Course Objective
- To impart the basic programming constructs in Java to develop simple object oriented programs
  - To explore the skills in program development using Exception handling and multi-threading concepts.
  - To develop applications using I/O Streams
  - To gain programming skills to establish database connectivity
  - To gain the built in knowledge of standalone and web applications

**Expt. No. Description of the Experiments**

- Create an Employee payroll application using classes, objects and constructors. Create objects for three different employees and calculate HRA, DA and total pay
- Create a Banking Application to calculate simple interest and compound interest using Abstract class, Packages and Interface.
- Write a Java program to illustrate Method Overloading to calculate the area of the following shapes (i) Square (ii) Rectangle (iii) Circle
- Write a Java program to implement multi threading concepts  
  
Write a Java program to illustrate Method Overriding for the following:
- Get the empid, name, grade, salary, designation from the user. Create a base class employee and display the employee details using show( ) method. Create a derived class sports employee and display the sports details using show( ) method.  
  
Write a Java Program to throw a User Defined Exception for the following
- Credit Point Validation  
  
Age Less Than Twenty  
  
Write a Java program to implement the following in-built exceptions:
- Array Index Out Of Bounds Exception  
  
Arithmetic Exception
- Develop with suitable hierarchy, classes for Point, Shape, Rectangle, Square, Circle, Ellipse, Triangle, Polygon, etc. Design a simple test application to demonstrate dynamic polymorphism.
- Write a window based Graphic User Interface applications using frames and applets to simulate a calculator application. Use Grid Layout to place the components
- Write a java program to implement different forms of Inheritance for employee information system.  
  
Write a java program with Database Connectivity for the following web based application to check the status of student result.
- Create a Database for student with the following fields: Regno, Name, Mark1, Mark2, Mark3, Mark4, Mark5 and Grade.  
  
Create a HTML for getting Regno from the user.  
  
Create an application program for displaying the student details for the corresponding Regno

**Total Practical Hours 45**

*A. K. Jayan*  
**Chairman - BoS  
MCA - HICET**

*[Signature]*  
**Dean (Academics)  
HICET**

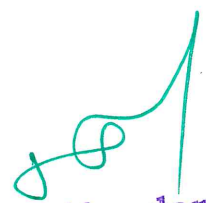

Course Outcome  
CO1: Develop programs using OOPS concepts.  
CO2: Analyze the various Java packages and understand the way the classes are organized  
CO3: Implement programs using Input and Output in Java.  
CO4: Execute programs in Applet, AWT and Event handlers in Java.  
CO5: Design programs using Database connectivity

**Software required:**

- Java 2.0, NetBeans 8.0

  
**Chairman - BoS**  
**MCA - HICET**

  
**Dean (Academics)**  
**HICET**

| Programme | Course Code | Name Of The Course                          | L | T | P | C |
|-----------|-------------|---|---|---|---|---|
| MCA       | 16CA3003    | COMPUTER GRAPHICS AND MULTIMEDIA LABORATORY | 0 | 0 | 4 | 2 |

- Course Objective
1. The objectives of the course are to: Understand the need of developing graphics applications.
  2. Learn the hardware involved in building graphics applications.
  3. Learn algorithmic development of graphics primitives like: line, circle, ellipse, polygon etc.
  4. Learn the representation and transformation of graphical images and pictures.
  5. Learn the concept of Color Generation.

**S.No Description Of The Experiments**

- 1 **LINE DRAWING AND CIRCLE DRAWING ALGORITHMS**  
Implement Line drawing algorithm like DDA, Bresenham's Line Drawing, Mid circle drawing
- 2 **TWO DIMENSIONAL TRANSFORMATIONS:**  
Creation of two dimensional objects and applying simple transformations like Translation, Scaling, Rotation and applying Composite transformations
- 3 **THREE DIMENSIONAL TRANSFORMATIONS:**  
Creation of simple three dimensional objects like cube, cone and cylinder and applying simple transformations like Translation, Scaling, Rotation and applying Composite transformations.
- 4 **IMAGE EDITING:**  
Image enhancement, Image transformation from color to gray scale and vice versa, Image manipulation and Image optimization for web - Usage of editing tools, layers, filters, special effects and color modes.

**Total Instructional Hours** 45

- Course Outcome
- CO1: Understand the basic concepts of computer graphics.  
CO2: Apply clipping and filling techniques for modifying an object.  
CO3: Understand the concepts of different type of geometric transformation of objects in 2D and 3D.  
CO4: Understand the practical implementation of modeling, rendering, viewing of objects in 2D.  
CO5: Understand the concepts of Viewing, Curves and surfaces

**Software required:**

- Turbo C , Adobe PhotoShop 6

  
**Chairman - BoS**  
**MCA - HiCET**

  
**Dean (Academics)**  
**HiCET**

## RECORD LAY OUT

1. Every student has to maintain a record in which he / she has to incorporate the following details.
2. Students have to collect materials related to topics for Group Discussion / Debate.
3. 10 assignments of Lab observations related to Presentation Skills about 200 words each.
4. Covering letter with Bio data / Resume / Curriculum Vitae.
5. Paper Presentation Topics with source materials to be pasted in the record.

|         |   |
|---------|---|
| Course  | CO1: Display competence in oral, written, and visual communication.                   |
| Outcome | CO2: Show an understanding of opportunities in the field of communication.            |
|         | CO3: Demonstrate positive group communication exchanges.                              |
|         | CO4: Apply appropriate communication skills across settings, purposes, and audiences. |
|         | CO5: Build and maintain healthy and effective relationships.                          |

|-----------|-------------|---------------------|---|---|---|---|
| MCA       | 16CA4201    | OPERATIONS RESEARCH | 3 | 1 | 0 | 4 |

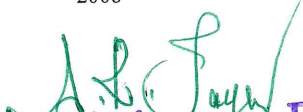

- Course Objective
1. To provide the concept and an understanding of basic concepts in Operations Research Techniques for Analysis and Modeling in Computer Applications.
  2. To understand, develop and solve mathematical model of linear programming problems
  3. To understand, develop and solve mathematical model of Transport and assignment problems
  4. To Understand network modeling for planning and scheduling the project activities
  5. To Understand and differentiate the different queuing models

| Unit                             | Description   | Instructional Hours |
|----------------------------------|---|---------------------|
| I                                | <b>LINEAR PROGRAMMING MODELS</b><br>Mathematical Formulation - Graphical Solution of linear programming models – Simplex method – Artificial variable Techniques- Variants of Simplex method  | 12                  |
| II                               | <b>TRANSPORTATION AND ASSIGNMENT MODELS</b><br>Mathematical formulation of transportation problem- Methods for finding initial basic feasible solution – optimum solution - degeneracy – Mathematical formulation of assignment models – Hungarian Algorithm – Variants of the Assignment problem | 12                  |

| V                                | <b>QUEUEING MODELS</b><br>Characteristics of Queuing Models – Poisson Queues - (M / M / 1) : (FIFO / ∞ / ∞), (M / M / 1) : (FIFO / N / ∞), (M / M / C) : (FIFO / ∞ / ∞), (M / M / C) : (FIFO / N / ∞) models.   | 12                  |
| <b>Total Instructional Hours</b> |   | <b>60</b>           |

- Course Outcome
- CO1: Able to understand and apply linear, integer programming to solve operational problem with constraints
- CO2: Able to Apply transportation and assignment models to find optimal solution in warehousing and Travelling,
- CO3: Able to Demonstrate project scheduling using PERT and CPM
- CO4: Able to Identify and analyze appropriate queuing model to reduce the waiting time in queue.
- CO5: Able to Interpret optimization concepts in real world problems

1. Demonstrate the 8051 and ARM kit ,instruction set & write Assembly Language program
  2. Apply the programming concepts to 8051 and ARM Microcontroller
  3. Use proper peripheral devices and interface to 8051
  4. Formulate the concept of mail box in RTOS.
  5. Demonstrate ARM based interfacing

**S.No Description Of The Experiments**

**8051 Experiments using kits**

- 1 Basic arithmetic and Logical operations
- 2 Square & Cube of a number
- 3 Matrix Addition and Subtraction
- 4 Sorting, Largest & Smallest of an array
- 5 1's and 2's complement of a number
- 6 Stepper motor control interface

**ARM Experiments using kits**

- 7 Blinking of LED's connected through PORTS
- 8 Relay control
- 9 Interfacing PWM and LED
- 10 Mailbox

**Total Instructional Hours 45**

- Course Outcome
- CO1: Analyze the performance of 8051 programs for various types of inputs.  
CO2: Formulate the design logic of ARM programs  
CO3: Develop one industrial application using peripheral devices  
CO4: Interface various modules with 8051 and ARM  
CO5: Develop mailbox and enable intra process communication using RTOS

**Dean (Academics)**  
**HICET**

| Programme | Course code | Name of the course                | L | T | P | C |
|-----------|-------------|-----------------------------------|---|---|---|---|
| MCA       | 16CA4002    | NETWORK PROGRAMMING<br>LABORATORY | 0 | 0 | 4 | 2 |

- Course Objective
- To Understand the Basic Linux Commands and to implement simple programs in Shell Scripts.
  - To understand IPC using various techniques and Signal Generation
  - To understand the use of client/server architecture in application development using TCP ,UDP and Raw Sockets
  - To Understand the Concept of Domain Name System
  - To achieve the concept of synchronization using various techniques

| S.No                             | Description of the Experiments   | Total Practical Hours |
|----------------------------------|--|-----------------------|
| 1                                | Implementation of Basic Linux Commands, I/O redirection & Pipes and Task Control                         |                       |
| 2                                | Implementation of Basic Shell Scripts  |                       |
| 3                                | Implementation of Connection oriented service using TCP  |                       |
| 4                                | Implementation of Connectionless Oriented Service using UDP  |                       |
| 5                                | Implementation of IPC using PIPE, FIFO, SHARED MEMORY, MESSAGE QUEUE                                     |                       |
| 6                                | To illustrate the concept of interrupt signal using signal handler and division by zero using sigaction. |                       |
| 7                                | Implement Domain name System using its various Functions   |                       |
| 8                                | To implement multiple client chatting with a single server   |                       |
| 9                                | Implement a program for producer and consumer problem to achieve synchronization using semaphores        |                       |
| 10                               | Implement producer consumer problem using mutex and conditional variables                                |                       |
| 11                               | To implement a trace route program given an IP address.  |                       |
| 12                               | Implement a Ping program in C  |                       |
| <b>Total Instructional Hours</b> |  | <b>45</b>             |

Course Outcome

CO1 :Understanding the basics of Linux Environment and Code programs on Shell Scripts  
CO2 :Demonstrate Signal Handling mechanism and implement various IPC techniques  
CO3: To design and implement client-server applications using Connection oriented and Connectionless methods  
CO4: Construct various functions of DNS.  
CO5: Design and Implement applications to achieve Synchronization using semaphores and Mutex and code Ping and Trace route using Raw Sockets.

**Software required:**

- C with Unix
- Telnet

#### RECORD LAY OUT

- Every student has to maintain a record in which he / she have to incorporate the following details.
- Students have to collect materials related to topics for Group Discussion / Debate.
- 10 assignments of Lab observations related to Presentation Skills about 200 words each.
- Covering letter with Bio data / Resume / Curriculum Vitae.
- Paper Presentation Topics with source materials to be pasted in the record.

CO1: Display competence in oral, written, and visual communication.  
CO2: Handle Engineering Ethics and Human Values.

#### COURSE OUTCOME

CO3: Make effective presentations.  
CO4: Show an understanding of opportunities in the field of communication.  
CO5: Communicate ethically.

**Chairman - BoS**  
**MCA - HICET**

  
**Dean (Academics)**  
**HICET**

| Programme | Course Code | Name of the Course                       | L | T | P | C |
|-----------|-------------|--|---|---|---|---|
| MCA       | 16CA4701    | TECHNICAL SEMINAR/TECHNICAL PUBLICATIONS | 0 | 0 | 4 | 2 |

- Course Objective
1. Train the students to critically evaluate a well-defined set of research subjects.
  2. To summarize the findings concisely in a paper of scientific quality.
  3. Ability to understand a topic, communicate it and identify the issues.
  4. To promote and develop presentation skills and impart a knowledgeable society.
  5. Effective use oral and written forms of communication, that results in integrative thinking.

**Sl. No. Description of the Experiments**

1. Every student selects a topic related to current trends and the same should be approved by the respective committee. This selection should have at least 5 distinct primary sources.
2. Every student must write a short review of the topic and present it to fellow students and faculty (discuss the topic – expose the flaws – analyze the issues) every week. The faculty should evaluate the short review and award marks with respect to the following.
  - a. Has the student analyzed – not merely quoted – the most significant portions of the primary sources employed?
  - b. Has the student offered original and convincing insights?
  - c. Plagiarism to be checked.
3. Every student should re-submit and present the review article including issues/ comments/ conclusions which had arisen during the previous discussion.
4. Every student should submit a final paper as per project specifications along with all short review reports (at least 4 internal reviews) and corresponding evaluation comments.
5. Every student should appear for a final external review exam to defend themselves.

**Total Practical Hours 45**

- Course Outcome
- CO1: understand the role that effective presentations have in public/professional contexts.  
 CO2: Gain experience in formal/ informal presentation.  
 CO3: Access information in a variety of ways appropriate to a discipline, including locating and using library collections and services and other search tools and databases  
 CO4: Obtain, select, store, create and use support materials appropriately  
 CO5: Ability to write technical documents and give oral presentations related to the work completed.

**ELECTIVE I & II**

| Programme | Course Code | Name of the Course | L | T | P | C |
|-----------|-------------|--------------------|---|---|---|---|
| MCA       | 16CA4301    | TCP/IP             | 3 | 0 | 0 | 3 |

- Course Objective
1. Understand the IP addressing schemes.
  2. Understand the fundamentals of network design and implementation
  3. Understand the design and implementation of TCP/IP networks
  4. Understand on network management issues
  5. Learn to design and implement network applications

| Unit                             | Description   | Instructional Hours |
|----------------------------------|---|---------------------|
| <b>INTRODUCTION</b>              |   |                     |
| I                                | Internetworking concepts and architecture model – class ful Internet address CIDR – Sub netting and Supernetting – AARP – RARP – IP Routing – ICMP – IPV6.  | 9                   |
| <b>TCP</b>                       |   |                     |
| II                               | Services – header – connection establishment and termination – interactive data flow – bulk data flow – timeout and retransmission – persist timer – keep alive timer – futures and performance.                          | 9                   |
| <b>IP IMPLEMENTATION</b>         |   |                     |
| III                              | IP global software organization –routing table–routing algorithms – fragmentation and reassembly – error processing (ICMP) – Multicast Processing (IGMP).   | 9                   |
| <b>TCP IMPLEMENTATION - I</b>    |   |                     |
| IV                               | Data structure and input processing – transmission control blocks – segment format – comparison– finite state machine implementation – Output processing – mutual exclusion –computing the computing the TCP Data length. | 9                   |
| <b>TCP IMPLEMENTATION - II</b>   |   |                     |
| V                                | Timers – events and messages – timer process – deleting and inserting timer event – flow control and adaptive retransmission– congestion avoidance and control – urgent data processing and push function.                | 9                   |
| <b>Total Instructional Hours</b> |   | <b>45</b>           |

- Course Outcome
- CO1 : Design and implement TCP/IP networks  
 CO2 : Understand the IP addressing schemes and the fundamentals of network design and implementation  
 CO3 : Develop data structures for basic protocol functions of TCP/IP  
 CO4 : Understand the Design and implement network applications..  
 CO5 : Design the data structures for maintaining multiple local and global timers.

|-----------|-------------|-----------------------------|---|---|---|---|
| MCA       | 16CA4302    | SOFTWARE PROJECT MANAGEMENT | 3 | 0 | 0 | 3 |

- Course Objective
1. Match organizational needs to the most effective software development model and to Plan and manage projects at each stage of the software development life cycle (SDLC)
  2. Create project plans that address real-world management challenges
  3. Develop the skills for tracking and controlling software deliverables
  4. To learn the cost estimation techniques during the analysis of the project.
  5. To understand the quality concepts for ensuring the functionality of the software

| Unit   | Description   | Instructional Hours |
|--|---|---------------------|
| <b>INTRODUCTION TO SOFTWARE PROJECT MANAGEMENT</b> |   |                     |
| I  | Project Definition – Contract Management – Activities Covered By Software Project Management – Overview Of Project Planning – Stepwise Project Planning.  | 9                   |
| <b>PROJECT EVALUATION</b>                          |   |                     |
| II   | Strategic Assessment – Technical Assessment – Cost Benefit Analysis – Cash Flow Forecasting – Cost Benefit Evaluation Techniques – Risk Evaluation.   | 9                   |
| <b>ACTIVITY PLANNING</b>                           |   |                     |
| III  | Objectives – Project Schedule – Sequencing And Scheduling Activities – Network Planning Models – Forward Pass – Backward Pass – Activity Float – Shortening Project Duration – Activity On Arrow Networks – Risk Management – Nature Of Risk – Types Of Risk – Managing Risk – Hazard Identification – Hazard Analysis – Risk Planning And Control.                 | 9                   |
| <b>MONITORING AND CONTROL</b>                      |   |                     |
| IV   | Creating Framework – Collecting The Data – Visualizing Progress – Cost Monitoring – Earned Value – Prioritizing Monitoring – Getting Project Back To Target – Change Control – Managing Contracts – Introduction – Types Of Contract – Stages In Contract Placement – Typical Terms Of A Contract – Contract Management – Acceptance.                               | 9                   |
| <b>MANAGING PEOPLE AND ORGANIZING TEAMS</b>        |   |                     |
| V  | Introduction – Understanding Behavior – Organizational Behaviour: A Background – Selecting The Right Person For The Job – Instruction In The Best Methods – Motivation – The Oldman–Hackman Job Characteristics Model – Working In Groups – Becoming A Team – Decision Making – Leadership – Organizational Structures – Stress – Health And Safety – Case Studies. | 9                   |

**Total Instructional Hours** 45

Course CO1: Understand the activities during the project scheduling of any software application.

Outcome CO2: Understand the risk management activities and the resource allocation for the projects.

*A. S. Jayaraj*  
**Chairman - BoS**  
**MCA - HICET**

*[Signature]*  
**Dean (Academics)**  
**HICET**

CO3: Apply the software estimation and recent quality standards for evaluation of the software projects

CO4: Acquire knowledge and skills needed for the construction of highly reliable software project

CO5: Create reliable, replicable cost estimation that links to the requirements of project planning and managing

|-----------|-------------|--------------------|---|---|---|---|
| MCA       | 16CA4303    | SOFTWARE TESTING   | 3 | 0 | 0 | 3 |

- Course Objective
- To introduce the concepts of Software bugs and its impact.
  - To understand the basic concepts, types and the way in which effective and efficient testing can be performed
  - To identify the issues in testing management and understand test planning.
  - To introduce various testing techniques along with software production.
  - To understand the standard principles to check the occurrence of defects and its removal.

| Unit | Description   | Instructional Hours |
|------|---|---------------------|
|      | <b>INTRODUCTION</b>   |                     |
| I    | Testing as an Organization –Bugs– Software Bugs – Reasons for Bugs – Cost of Bugs – Responsibilities of Software Tester –Software Development Process: Product Component – Life Cycle Models – Testing Realities  | 9                   |
|      | <b>TESTING FUNDAMENTALS</b>   |                     |
| II   | Examining the Specification – Testing the Software with Blinders On – Examining the Code – Testing the Software with X Ray Glasses.   | 9                   |
|      | <b>TESTING TYPES</b>  |                     |
| III  | Configuration Testing - Compatibility Testing: Overview –Platform and Application Version – Standards and Guidelines – Foreign Language Testing: Translation Issues – Localization Issues – Configuration and Compatibility Issues – Usability Testing – <b>Web Site Testing</b> : Black Box Testing – Gray Box Testing – White Box Testing – Configuration and Compatibility Testing – Usability Testing– Functional(Regression) & Non-Functional(Performance) –Agile. | 9                   |
|      | <b>AUTOMATED TESTING AND TEST TOOLS</b>   |                     |
| IV   | Benefits – Test Tools – Software Automation – Random Testing – Bug Bashes and Beta Testing: Test Sharing – Beta Testing – Outsourcing Your Testing – Testing for Software Security. <b>Test Documentation</b> : Planning your Test Effort: Goal of Planning – Planning Topics – Writing and Tacking Test Cases: Goal – Test Case Planning– Design – Cases – Procedures – Test Case Organization and Tracking  | 9                   |
|      | <b>REPORTING THE FINDINGS</b>   |                     |
| V    | Getting Bugs Fixed – Isolating and Reproducing Bugs – Bug Life Cycle – Bug Tracking System – Measuring the Success –KPI's & SLA's <b>Software Quality Assurance: A Case Study on Test Life Cycle</b>  | 9                   |
|      | <b>Total Instructional Hours</b>  | <b>45</b>           |

- Course Outcome
- CO1: To Understand the tester responsibilities and the software development process.
- CO2: To Understand the fundamentals of testing to perform an effective and efficient testing
- CO3: Test the software by applying testing techniques to deliver a product free from bugs
- CO4: Perform automated testing using test tools and document the testing procedures
- CO5: To Appreciate the bug tracking system and the importance of software quality assurance.

|-------------------------|--------------------------------|---|---------------|---------------|---------------|---------------|

- Course Objective
1. Develop an understanding of information assurance as practiced in computer operating systems, distributed systems, networks and representative applications.
  2. Gain familiarity with prevalent network and distributed system attacks, defenses against them, and forensics to investigate the aftermath.
  3. Develop an understanding of security policies (such as authentication, integrity and confidentiality), as well as protocols to implement such policies in the form of message exchanges.
  4. Understand the legal aspects of forensics
  5. Recognize the state of the practice and the gaps in technology, policy, and legal issues.

Dean (Academics)  
HiCET

Course  
Outcome

CO1: Understand and analyze the fundamentals of Disk forensics  
CO2: Understand and analyze the fundamentals of Software forensics  
CO3: Understand and analyze the fundamentals of Network forensics  
CO4: Understand and analyze fundamentals of cyber security and relationship between IT and forensics  
CO5: Understand and analyze the security investigation

**REFERENCE BOOKS:**

| Programme | Course code | Name of the course                  | L | T | P | C |
|-----------|-------------|-------------------------------------|---|---|---|---|
| MCA       | 16BA4352    | ACCOUNTING AND FINANCIAL MANAGEMENT | 3 | 0 | 0 | 3 |

- Course Objective
- To enable the students to study the basic accounting concepts and preparation of financial statements.
  - To enable the students to study the techniques of financial statement analysis
  - To enable the students to study the application of cost accounting technique to ascertain the cost of products or services
  - To enable the students to study the cost volume profit analysis and preparation of various budgets in the modern business
  - To enable the students to study the role of financial management in the modern business enterprise and the appraisal methods on capital assets

| Unit                             | Description   | Instructional hours |
|----------------------------------|---|---------------------|
| I                                | <b>FINANCIAL ACCOUNTING</b><br>Financial Accounting – Meaning and Definition. Accounting Concepts and conventions. Double entry principles of book keeping. Journal entry-Posting in to Ledger-Preparation of Trial Balance- Preparation of Final Accounts.   | 10                  |
| II                               | <b>FINANCIAL STATEMENT ANALYSIS</b><br>Analysis of financial statements -Techniques of Interpretation of financial statements-Comparative statement-Common size statement-Trend analysis-Ratio Analysis- Funds Flow -Cash Flow Analysis.  | 10                  |
| III                              | <b>COST AND MANAGEMENT ACCOUNTING</b><br>Definitions Cost Accounting and Management Accounting –Distinction between Financial Accounting with Cost Accounting and Management Accounting. Cost Terminology – functional classification of cost. Cost Centre- Cost Unit. Elements of Cost – Preparation of Cost Sheet   | 5                   |
| IV                               | <b>MARGINAL COSTING AND BUDGETARY CONTROL</b><br>Marginal costing - Marginal Costing. Equation-Contribution. Break Even Analysis-Breakeven point- applications of marginal costing- Meaning and need of budgetary control.-Different types of budgets- Preparation of budget -Cash budget- flexible budget and other budgets.   | 10                  |
| V                                | <b>FINANCIAL MANAGEMENT</b><br>Financial Management an overview. Objectives and functions of Financial Management- Concept of Time value of money- Techniques in computation of time value of money. Meaning and nature of Capital Budgeting Decision- Methods of appraisal capital budgeting. Non-discounted cash flow techniques and discounted cash flow techniques. | 10                  |
| <b>Total instructional hours</b> |   | 45                  |

- Course Outcome
- CO1: Students can able to understand the practice of preparation of financial statement in the modern business.
- CO2: Students can able to understand the techniques on analysis of financial statement in the modern business
- CO3: Students can able to understand the application of cost accounting techniques while computing the cost of products and services
- CO4: Students can able to understand the cost volume profit analysis and preparation of various budgets in the modern business
- CO5: Students can able to understand the role of financial management in the modern business enterprise and the appraisal methods on capital assets

Note : 50% Theory, 50 % Problems

# **SYLLABUS**

| Programme | Course Code | Name of the Course | L | T | P | C |
|-----------|-------------|--------------------|---|---|---|---|
| MCA       | 16CA5201    | PHP PROGRAMMING    | 3 | 0 | 0 | 3 |

- Course Objective
- To understand the basic concepts of PHP programming.
  - To design HTML web pages, designing web sites using templates and to perform validations.
  - To understand the OOPS concepts and to improve the performance of Web applications through cookies, caching and buffering.
  - To design applications using files and database connectivity in PHP
  - To develop the MVC pattern models

| Unit | Description   | Instructional Hours |
|------|---|---------------------|
|      | <b>OPEN SOURCE PROGRAMMING LANGUAGES-PHP</b>  |                     |
| I    | Introduction to PHP Hypertext Processor(PHP) – Programming in Web Environment – Variables – Constants – Data Type – Operators – Decision and Loops Statements – Functions – Arrays - String Manipulation and Regular Expression | 9                   |
|      | <b>WEB DESIGNING TOOLS</b>  |                     |
| II   | HTML – Tags – Forms and Tables – CSS properties and working with Templates, Java Script – Client side validation – JQuery forms – PHP with AJAX   | 9                   |
|      | <b>ADVANCED PHP</b>   |                     |
| III  | Object Oriented Programming – Objects – Classes – Polymorphism – Interface – Inheritance and Code Reusability – Exceptional Handling – cookies – caching – buffering  | 9                   |
|      | <b>PHP DATABASE CONNECTIVITY</b>  |                     |
| IV   | File Handling and Data Storage – PHP and SQL Database – PHP and Lightweight Directory Access Protocol (LDAP) – PHP Hypertext Processor (PHP) Connectivity – Sending and Receiving E-mails – Templates.                          | 9                   |
|      | <b>FRAMEWORK</b>  |                     |
| V    | Understanding the MVC pattern models – Cake PHP – Creating up model for database table – Controller – Creating views – Creating Sessions  | 9                   |
|      | <b>Total Instructional Hours</b>  | <b>45</b>           |

- Course Outcome
- CO1: Understand the basic concepts of PHP programming.  
CO2: Able to design HTML web pages, Designing web sites using templates and to perform validations.  
CO3: Understand the OOPS concepts and to improve the performance of Web applications through cookies, caching and buffering.  
CO4: Design applications using files and database connectivity in PHP  
CO5: Able to deploy the MVC pattern models

| Programme | Course Code | Name of the Course | L | T | P | C |
|-----------|-------------|--------------------|---|---|---|---|
| MCA       | 16CA5202    | PYTHON PROGRAMMING | 3 | 0 | 0 | 3 |

- Course Objective
1. Develop an understanding on the basic concepts of Python Programming
  2. To understand File operations, Classes and Objects and regular Expressions.
  3. To design applications using Threads , GUI and web programming
  4. To create Client server networking applications
  5. To develop web applications using Python

| Unit                             | Description  | Instructional Hours |
|----------------------------------|--|---------------------|
| <b>CORE PYTHON</b>               |  |                     |
| I                                | Introduction – Conditional Statements – Looping – Control Statements – String Manipulation – Lists – Tuple – Dictionaries        | 9                   |
| <b>ADVANCED PYTHON - I</b>       |  |                     |
| II                               | Files – Input and Output – Errors and Exceptions – Functions - Modules – Classes and Objects – Regular Expression                | 9                   |
| <b>ADVANCED PYTHON - II</b>      |  |                     |
| III                              | Internet Client Programming – Multithreaded Programming – threads and processes- GUI programming, Advanced CGI – Web Programming | 9                   |
| <b>NETWORK PROGRAMMING</b>       |  |                     |
| IV                               | Introduction to Client – Server Networking, UDP, TCP, Socket names and DNS , HTTP Clients and HTTP Servers                       | 9                   |
| <b>WEB DEVELOPMENT</b>           |  |                     |
| V                                | Basic web application structure – Templates – Web Forms – Databases - Email – User Authentication – testing - Deployment         | 9                   |
| <b>Total Instructional Hours</b> |  | <b>45</b>           |

- Course Outcome
- CO1: Understand the basic concepts of Python programming.  
CO2: Design applications using Files, Modules, Classes and Objects .  
CO3: Implement applications using multithreading concepts and development of GUI applications  
CO4: Design applications using Client Server Networking using TCP, UDP  
CO5: Able to deploy web Development applications under Flask

| Programme | Course Code | Name of the Course | L | T | P | C |
|-----------|-------------|--------------------|---|---|---|---|
| MCA       | 16CA5001    | PHP LABORATORY     | 0 | 0 | 4 | 2 |

- Course Objective
- To develop Simple programs using arrays, functions and strings
  - To understand threading concepts to develop web application.
  - To understand networking concepts to implement TCP and UDP.
  - To Design and host a user friendly website with authentication features
  - To understand the basics of PHP programming and create GUI applications, database connectivity.

**Expt. No. Description of the Experiments**

**PHP**

- Demonstrate Simple programs using looping, arrays, strings manipulations, classes, objects concepts.
- Develop PHP program using controls and function.
- Implement an application to perform message passing mechanism between pages.
- Develop a PHP program using String function and Arrays.
- Develop a PHP program and check File System functions, Network functions, Date and time functions.
- Develop a PHP program to display student information using MYSQL table.
- Develop a PHP program using parsing functions (use Tokenizing).
- Develop a PHP program and check Regular Expression, HTML functions, Hashing functions.
- Develop a PHP program using cookie and session.
- Develop an online application to illustrate the concept of threads.
- Implement Client Server networking applications using TCP and UDP.
- Create a simple web application with necessary authentication features and testing strategies and deploy it in the web.

**Total Practical Hours 45**

- Course Outcome
- CO1: Develop Simple to illustrate arrays, functions and strings  
CO2: Able to apply the threading concepts to develop web application.  
CO3: Design networking concepts to implement TCP and UDP.  
CO4: Design, develop and host a user friendly website with authentication features  
CO5: Understand the basics of PHP programming and create GUI applications, database connectivity programs and web applications in PHP

| Programme | Course Code | Name of the Course            | L | T | P | C |
|-----------|-------------|-------------------------------|---|---|---|---|
| MCA       | 16CA5002    | PYTHON PROGRAMMING LABORATORY | 0 | 0 | 4 | 2 |

- Course Objective
1. To understand basics of Python Programming Language
  2. To develop data structures concepts, exceptional Handling and to create and run functions and regular expressions using python.
  3. To design object-oriented programs with Python classes and threading concepts
  4. To Implement Networking Concepts using Python.
  5. To develop Web applications using database connectivity

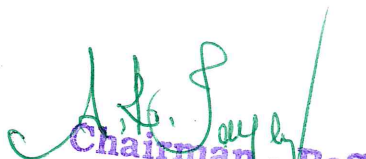

Expt. No.

**Description of the Experiments**

1. Develop programs to understand the control structures of python
2. Develop programs to learn different types of structures (list, dictionary, tuples) in python
3. Develop programs to learn concept of functions scoping, recursion and list mutability.
4. Develop programs to understand working of exception handling and assertions.
5. Develop programs for data structure algorithms using python searching, sorting and hash tables.
6. Develop programs to learn regular expressions using python.
7. Develop application using multithreading and classes
8. Implement Client Server Programming using TCP
9. Implement Client Server Programming using UDP
10. Develop applications using web application using database connectivity

**Total Practical Hours 45**

- Course Outcome
- CO1:Design and develop applications using basic concepts of Python  
CO2:Implement programs using functions, recursion, mutability exception handling, assertion and Data Structures Algorithm  
CO3: Design and Implement applications using classes, objects and Multithreading.  
CO4:Design Client / Server applications using Python Programming  
CO5:Develop Web Applications using database connectivity

| Programme | Course Code | Name of the Course | L | T | P | C |
|-----------|-------------|--------------------|---|---|---|---|
| MCA       | 16CA5801    | MINI PROJECT       | 0 | 0 | 8 | 4 |

Team Project with a maximum of four in a team

**Sl. No. Description of the Experiments**

1. Students shall develop creative or innovative project.
2. Need to submit a report, presentation with demo.
3. User Based Testing and feedback from the benefited society required.

**Total Practical Hours 45**

Course Outcome  
 CO1: Develop skill to create practical solutions to identified problem.  
 CO2: Use software lifecycle model and other artifacts appropriate for problem.  
 CO3: Identify and master tools required for the project.  
 CO4: Plan and work systematically towards completion of a project work.  
 CO5: Develop the ability to explain and defend their work in front of an evaluation panel.

**ELECTIVE – III**

| Programme | Course Code | Name of the Course | L | T | P | C |
|-----------|-------------|--------------------|---|---|---|---|
| MCA       | 16CA5301    | BIG DATA ANALYTICS | 3 | 0 | 0 | 3 |

| Course Objective |  |
|------------------|--|
|                  | 1. To explore the fundamental concepts of big data analytics                               |
|                  | 2. To learn to use various techniques for mining data stream.                              |
|                  | 3. Learn to build and maintain reliable, scalable, distributed systems with Apache Hadoop. |
|                  | 4. To understand the various search methods and visualization techniques.                  |
|                  | 5. To understand the applications using Map Reduce Concepts.                               |

| Unit                             | Description  | Instructional Hours |
|----------------------------------|--|---------------------|
| I                                | <b>INTRODUCTION TO BIG DATA</b><br>Introduction to BigData Platform – Challenges of Conventional Systems - Intelligent data analysis – Nature of Data - Analytic Processes and Tools - Analysis vs Reporting - Modern Data Analytic Tools  | 9                   |
| II                               | <b>MINING DATA STREAMS</b><br>Introduction To Streams Concepts – Stream Data Model and Architecture - Stream Computing - Sampling Data in a Stream – Filtering Streams – Counting Distinct Elements in a Stream – Estimating Moments – Counting Oneness in a Window – Decaying Window - Case Studies - Real Time Sentiment Analysis, Stock Market Predictions.   | 9                   |
| III                              | <b>HADOOP</b><br>History of Hadoop- The Hadoop Distributed File System – Components of Hadoop- Analyzing the Data with Hadoop- Scaling Out- Hadoop Streaming- Design of HDFS-Java interfaces to HDFS-Basics-Developing a Map Reduce Application-How Map Reduce Works-Anatomy of a Map Reduce Job run-Failures-Job Scheduling-Shuffle and Sort – Task execution - Map Reduce Types and Formats- Map Reduce Features | 9                   |
| IV                               | <b>HADOOP ENVIRONMENT</b><br>Setting up a Hadoop Cluster - Cluster specification - Cluster Setup and Installation - Hadoop Configuration-Security in Hadoop - Administering Hadoop– HDFS - Monitoring-Maintenance.   | 9                   |
| V                                | <b>FRAMEWORKS</b><br>Applications on Big Data Using Pig and Hive – Data processing operators in Pig – Hive services – HiveQL – Querying Data in Hive - fundamentals of HBase and ZooKeeper. Visualizations - Visual data analysis techniques, interaction techniques; Systems and applications   | 9                   |
| <b>Total Instructional Hours</b> |  | <b>45</b>           |

| Course Outcome |   |
|----------------|---|
|                | CO1: Work with big data platform, Analyze the big data analytic techniques for useful business applications |
|                | CO2: Design efficient algorithms for mining the data from large volumes.                                    |
|                | CO3: Analyze the HADOOP and Map Reduce technologies associated with big data analytics                      |
|                | CO4 : Explore on Big Data applications Using Pig and Hive   |
|                | CO5: Understand the fundamentals of various bigdata analysis techniques                                     |

| Programme | Course Code | Name of the Course               | L | T | P | C |
|-----------|-------------|----------------------------------|---|---|---|---|
| MCA       | 16CA5302    | DATA WAREHOUSING AND DATA MINING | 3 | 0 | 0 | 3 |

- Course Objective
1. To expose the students to the concepts of Data warehousing Architecture and Implementation
  2. To Understand Data mining principles and techniques and Introduce DM as a cutting edge business intelligence
  3. To learn to use association rule mining for handling large data
  4. To understand the concept of classification for the retrieval purposes
  5. To know the clustering techniques in details for better organization and retrieval of data To identify Business applications and Trends of Data mining

| Unit                             | Description   | Instructional Hours |
|----------------------------------|---|---------------------|
| I                                | <b>DATA WAREHOUSE</b><br>Data Warehousing - Operational Database Systems vs. Data Warehouses - Multidimensional Data Model - Schemas for Multidimensional Databases – OLAP Operations – Data Warehouse Architecture– Indexing – OLAP queries & Tools.   | 8                   |
| II                               | <b>DATA MINING &amp; DATA PREPROCESSING</b><br>Introduction to KDD process – Knowledge Discovery from Databases - Need for Data Preprocessing – Data Cleaning – Data Integration and Transformation – Data Reduction – Data Discretization and Concept Hierarchy Generation.  | 9                   |
| III                              | <b>ASSOCIATION RULE MINING</b><br>Introduction - Data Mining Functionalities - Association Rule Mining - Mining Frequent Itemsets with and without Candidate Generation - Mining Various Kinds of Association Rules - Constraint-Based Association Mining.  | 8                   |
| IV                               | <b>CLASSIFICATION &amp; PREDICTION</b><br>Classification vs. Prediction – Data preparation for Classification and Prediction – Classification by Decision Tree Introduction – Bayesian Classification – Rule Based Classification – Classification by Back Propagation Associative Classification – Prediction – Accuracy and Error Measures – Evaluating the Accuracy of a Classifier or Predictor – Ensemble Methods – Model Section. | 10                  |
| V                                | <b>CLUSTERING</b><br>Cluster Analysis: - Types of Data in Cluster Analysis – A Categorization of Major Clustering Methods – Partitioning Methods – Hierarchical methods – Density-Based Methods – Grid-Based Methods – Model-Based Clustering Methods – Clustering High- Dimensional Data – Constraint-Based Cluster Analysis – Outlier Analysis  | 10                  |
| <b>Total Instructional Hours</b> |   | <b>45</b>           |

- Course Outcome
- CO1: Apply the association rules for mining the data  
CO2: Design and deploy appropriate classification techniques  
CO3: Cluster the high dimensional data for better organization of the data  
CO4: Evolve Multidimensional Intelligent model from typical system  
CO5: Evaluate various mining techniques on complex data objects

|-----------|-------------|--------------------|---|---|---|---|
| MCA       | 16CA5303    | CLOUD COMPUTING    | 3 | 0 | 0 | 3 |

- Course Objective
1. Understand the cloud environment and building software systems and components that scale to millions of users in modern internet
  2. Understand the key dimensions of the challenge of Cloud Computing
  3. Understand the cloud concepts and capabilities across the various cloud service models
  4. Develop cloud based software applications on top of cloud platforms.
  5. Explain the core issues of cloud computing such as security

| Unit                                  | Description   | Instructional Hours |
|---------------------------------------|---|---------------------|
| <b>CLOUD COMPUTING – ARCHITECTURE</b> |   |                     |
| I                                     | Cloud Computing –History of cloud computing –Cloud Architecture –Cloud Storage –Need for Cloud Computing –Advantages – Architecture of Cloud – Cloud Services.  | 9                   |
| <b>CLOUD VIRTUALIZATION</b>           |   |                     |
| II                                    | Basics of Virtualization – Types and Implementation levels - Types of Cloud Service Development – –On Demand Computing –Amazon Ec2 –Virtualization of CPU, Memory, I/O Devices.                         | 9                   |
| <b>INFRASTRUCTURE</b>                 |   |                     |
| III                                   | Architectural Design of Storage Clouds – Design Challenges – Inter Cloud Resource Management – Platform Deployment – Virtualization of Data Centre automation - Hybrid storage networking technologies. | 9                   |
| <b>PROGRAMMING PARADIGMS</b>          |   |                     |
| IV                                    | MapReduce, Twister and Iterative MapReduce – Hadoop Library from Apache – Google App Engine – Amazon AWS – Eucalyptus – Open Nebula – Aneka.  | 9                   |
| <b>SECURITY</b>                       |   |                     |
| V                                     | Security Challenges and Risks – Software as Service Security – Risk Management – Security Monitoring – Identity Management.   | 9                   |
| <b>Total Instructional Hours</b>      |   | <b>45</b>           |

- Course Outcome
- CO1: Able to Articulate the basic concepts of cloud and its architecture.  
CO2: Able to understand virtualization concepts.  
CO3: Understand Cloud storage and its networking technologies.  
CO4: Understand the Programming Paradigms.  
CO5: Able to describe the prevalent security challenges in the cloud.

|-----------|-------------|--------------------|---|---|---|---|
| MCA       | 16CA5304    | MOBILE COMPUTING   | 3 | 0 | 0 | 3 |

- Course Objective
1. Understand the basic concepts of mobile computing
  2. Be familiar with the network protocol stack
  3. Learn the basics of mobile telecommunication system
  4. Be exposed to Ad-Hoc networks
  5. Gain knowledge about different mobile platforms and application development

| Unit                             | Description   | Instructional Hours |
|----------------------------------|---|---------------------|
|                                  | <b>INTRODUCTION</b>   |                     |
| I                                | Mobile Computing – Mobile Computing Vs wireless Networking – Mobile Computing Applications – Characteristics of Mobile computing – Structure of Mobile Computing Application. MAC Protocols – Wireless MAC Issues – Fixed Assignment Schemes – Random Assignment Schemes – Reservation Based Schemes. | 9                   |
|                                  | <b>MOBILE INTERNET PROTOCOL AND TRANSPORT LAYER</b>   |                     |
| II                               | Overview of Mobile IP – Features of Mobile IP – Key Mechanism in Mobile IP – route Optimization. Overview of TCP/IP – Architecture of TCP/IP- Adaptation of TCP Window – Improvement in TCP Performance.  | 9                   |
|                                  | <b>MOBILE TELECOMMUNICATION SYSTEM</b>  |                     |
| III                              | Global System for Mobile Communication (GSM) – General Packet Radio Service (GPRS) – Universal Mobile Telecommunication System (UMTS).  | 9                   |
|                                  | <b>MOBILE AD-HOC NETWORKS</b>   |                     |
| IV                               | Ad-Hoc Basic Concepts – Characteristics – Applications – Design Issues – Routing – Essential of Traditional Routing Protocols – Popular Routing Protocols – Vehicular Ad Hoc networks ( VANET) – MANET Vs VANET – Security  | 9                   |
|                                  | <b>MOBILE PLATFORMS AND APPLICATIONS</b>  |                     |
| V                                | Mobile Device Operating Systems – Special Constrains & Requirements – Commercial Mobile Operating Systems – Software Development Kit: iOS, Android, BlackBerry, Windows Phone   | 9                   |
| <b>Total Instructional Hours</b> |   | <b>45</b>           |

- Course Outcome
- CO1: Explain the basics of mobile telecommunication system  
CO2: Choose the required functionality at each layer for given application  
CO3: Identify solution for each functionality at each layer.  
CO4: Understand the basics of Ad hoc networks  
CO5: Identify the different types of mobile platform

|-----------|-------------|-----------------------|---|---|---|---|
| MCA       | 16CA5305    | SEMANTIC WEB SERVICES | 3 | 0 | 0 | 3 |

- Course Objective
1. Categories of ontologies and need and architecture of semantic web.
  2. Languages for representing semantic web.
  3. Ontology algorithm and evaluation.
  4. Constructing ontology using different tools.
  5. Potential applications of ontologies in web services

| Unit                             | Description   | Instructional Hours |
|----------------------------------|---|---------------------|
|                                  | <b>INTRODUCTION</b>   |                     |
| I                                | Components – Types – Ontological Commitments – Ontological Categories –Philosophical Background - Knowledge Representation Ontologies – Top Level Ontologies – Linguistic Ontologies – Domain Ontologies – Semantic Web – Need – Foundation – Layers – Architecture.                        | 9                   |
|                                  | <b>LANGUAGES FOR SEMANTIC WEB AND ONTOLOGIES</b>  |                     |
| II                               | Web Documents in XML – RDF - Schema – Web Resource Description using RDF- RDF Properties – Topic Maps and RDF – Overview – Syntax Structure – Semantics – Pragmatics - Traditional Ontology Languages – LOOM- OKBC – OCML – Flogic Ontology Markup Languages – SHOE – OIL - DAML + OIL- OWL | 9                   |
|                                  | <b>ONTOLOGY LEARNING FOR SEMANTIC WEB</b>   |                     |
| III                              | Taxonomy for Ontology Learning – Layered Approach – Phases of Ontology Learning – Importing and Processing Ontologies and Documents – Ontology Learning Algorithms – Evaluation   | 9                   |
|                                  | <b>ONTOLOGY MANAGEMENT AND TOOLS</b>  |                     |
| IV                               | Overview – need for management – development process – target ontology – ontology mapping – skills management system – ontological class – constraints – issues. Evolution – Development of Tools and Tool Suites – Ontology Merge Tools – Ontology based Annotation Tools.                 | 9                   |
|                                  | <b>APPLICATIONS</b>   |                     |
| V                                | Web Services – Semantic Web Services - Case Study for specific domain – Security issues – current trends.   | 9                   |
| <b>Total Instructional Hours</b> |   | <b>45</b>           |

- Course Outcome
- CO1:Develop integrated, ontology-based or ontology-mediated, applications based on knowledge level.  
CO2:Investigate foundational modeling aspects  
CO3:Develop tools for ontology development.  
CO4:Identify ontology-based data access and integration, combining rules with ontology and computational linguistics.  
CO5:Apply fundamental concepts like importing and processing Ontology of the semantic web.

| MCA       | 16CA5307    | WEB GRAPHICS       | 3 | 0 | 0 | 3 |

- Course Objective
1. To understand the introductory concepts of HTML
  2. Designing Images with various features using Raster Image Editing Software
  3. Creating Special Effects and Animation using Action Scripts.
  4. Incorporating Multimedia and sound effects in a web Page
  5. Creating an Interactive web site with all utilities

| Unit | Description  | Instructional Hours |
|------|--|---------------------|
|      | <b>INTRODUCTION</b>  |                     |
| I    | HTML coding - Basic web graphics - Web page design and site building - Image maps - Adding multimedia to the web- Vector and Raster graphics.  | 9                   |
|      | <b>RASTER IMAGE EDITING SOFTWARE</b>   |                     |
| II   | Introduction - Image Basics - File Formats - GIF - JPEG - Color Palette – Color models Layers - Creating new Images - Brushes – Grids and Guides- Gradients - Scaling Images - Moving and Merging Layers - Tool Palette - Dialogs - Masking – Filters – Adding text to images – Designing icons and background images. | 9                   |
|      | <b>VECTOR IMAGE HANDLING</b>   |                     |
| III  | Introduction – Creating Simple Vector graphics – Creating banners -Images - Working with layers – Tweening - Motion guide – Masking – Frame by Frame animation – Onion Skin Effect – Creating special effects - Text effects and animation – Action scripts.   | 9                   |
|      | <b>MULTIMEDIA</b>  |                     |
| IV   | Creating clippings - Animations with sound effects - Adding audio or Video - Windows Media Player ActiveX Control - Agent control - Embedding VRML in a web page - Real Player ActiveX control.  | 9                   |
|      | <b>APPLICATIONS</b>  |                     |
| V    | Creating web site with a particular theme using all the utilities - Graphics - Animations and Interaction.   | 9                   |
|      | <b>Total Instructional Hours</b>   | <b>45</b>           |

- Course Outcome
- CO1: Understand the Concepts of HTML and simple web site creation using HTML  
 CO2: Designing web pages using image editing software and its tools  
 CO3: Creating Flash web site  
 CO4: Correctly explain a variety of terms relating to web design, HTML, CSS, and Flash.  
 CO5: Design, create, and upload an original website.

|-----------|-------------|--------------------------------|---|---|---|---|
| MCA       | 16CA5309    | MANAGEMENT INFORMATION SYSTEMS | 3 | 0 | 0 | 3 |

- Course Objective
1. Understand the basic concepts and technologies used in the field of management information systems.
  2. Create the processes of developing and implementing information systems.
  3. Know the role of information systems in organizations, the strategic management processes, and the implications for the management.
  4. Able to understand the usage of Information Systems in management.
  5. Understand the activities that are undertaken in acquiring an Information System in an organization.

| Unit   | Description   | Total Instructional Hours |
|--|---|---------------------------|
| <b>SYSTEM CONCEPTS</b>                                 |   |                           |
| I  | Definition – Computer Based User Machine System – Integrated System – Need for a Database –Utilization of Models – Evolution – Subsystems – Organizational Subsystems – Activities Subsystems.  | 7                         |
| <b>ORGANIZATIONAL MODEL AND ORGANISATION STRUCTURE</b> |   |                           |
| II   | Basic Model – Hierarchical – Specialization – Formalization – Centralization - Modifications of Basic Organizational Structure – Project Organization – Lateral Relations – Matrix Organization – Organizational Culture and Power Organizational Change.   | 9                         |
| <b>STRUCTURE OF MIS</b>                                |   |                           |
| III  | Operating Elements – Physical Components – Processing Functions – Outputs – MIS support for Decision Making – Structured Programmable Decisions – Unstructured Non-Programmable Decisions – MIS Structure Based on Management Activity and Organizational Functions – Synthesis of MIS Structure. | 10                        |
| <b>SYSTEM SUPPORT</b>                                  |   |                           |
| IV   | Data Representation – Communication Network – Distributed Systems – Logical Data Concepts –Physical Storage Devices – File Organizations – Database Organization – Transaction Processing   | 10                        |
| <b>DEVELOPMENT AND MANAGEMENT</b>                      |   |                           |
| V  | A Contingency Approach to Choosing an Application – Developing Strategy – Life Cycle Definition Stage – Life & cycle Development Stage – Life & cycle Installation and Operation Stage – Project Management .   | 9                         |
| <b>Total Instructional Hours</b>                       |   | <b>45</b>                 |

- Course Outcome
- CO1: Understand the basic concepts and technologies used in the field of management information systems
- CO2: Understand the processes of developing and implementing information systems
- CO3: Understand the role of information systems in organizations, the strategic management processes, and the implications for the management
- CO4: Develop an understanding of how various information systems work together to accomplish the information objectives of an organization
- CO5: Understand about the importance of managing organizational change associated with information systems implementation

| MCA       | 16CA5310    | E-COMMERCE         | 3 | 0 | 0 | 3 |

- Course Objective
1. To understand the concepts of e-commerce
  2. Provide an overview of the Network Infrastructure and acquire knowledge about ecommerce models.
  3. To know and understand the e-advertising and marketing strategies.
  4. How companies use ecommerce to gain competitive advantage
  5. To understand the electronic data exchange and e-security

| Unit                             | Description   | Instructional Hours |
|----------------------------------|---|---------------------|
|                                  | <b>INTRODUCTION</b>   |                     |
| I                                | Framework, Architecture, Benefits and Impact of e-Commerce, The Anatomy of e-Commerce applications, e-Commerce Consumer applications, e-Commerce Organisation Applications, ecommerce in India, Prospects of e-commerce.  | 9                   |
|                                  | <b>NETWORK INFRASTRUCTURE &amp; E-COMMERCE MODELS</b>   |                     |
| II                               | Intranet, Extranet, & Internet, Internet Backbone in India, ISP and services in India, OSI Model, Standards & Overview of TCP/IP, Internet Security, ecommerce & Internet.<br>E-commerce Models: Business-to-Business-Hubs, Market Places, Business-to Business Exchange, Business-to-Consumer, Consumer-to-consumer, Business-to-Government, Government-to-Government. | 9                   |
|                                  | <b>E-ADVERTISING &amp; MARKETING</b>  |                     |
| III                              | The new age of information-based Marketing, Emergence of internet as a competitive advertising media, Market Research, Weakness in Internet Advertising, eAdvertising & Marketing in India.   | 9                   |
|                                  | <b>ELECTRONIC PAYMENT SYSTEMS</b>   |                     |
| IV                               | Introduction to Payment Systems, On-Line Payment Systems, Pre-Paid e-Payment System, Post-Paid e-Payment System, Requirements Metrics of a Payment System.  | 9                   |
|                                  | <b>ELECTRONIC DATA EXCHANGE &amp; E-SECURITY</b>  |                     |
| V                                | EDI- Definitions & Applications, Standardisation and EDI, EDI, Legal Security and Privacy Issues, E-Security: Securing the Business on Internet- Security Policy, Procedures and Practices, Transaction Security, Cryptology, Digital Signatures, Security Protocols for Web Commerce.  | 9                   |
| <b>Total Instructional Hours</b> |   | <b>45</b>           |

- Course Outcome
- CO1: Understand the Ecommerce Anatomy and Framework  
CO2: Analyze the impact of Ecommerce on business models  
CO3: Impact of E-advertising and Marketing in ECommerce  
CO4: Access of Electronic Payment Systems in ECommerce  
CO5: Recognize and discuss legal and privacy issues and procedures and practices of ESecurity

| MCA       | 16CA5311    | PROFESSIONAL ETHICS | 3 | 0 | 0 | 3 |

- Course Objective
1. To understand the concepts of computer ethics in work environment.
  2. To understand the threats in computing environment
  3. To understand the intricacies of accessibility issues
  4. To Understand what morality is and how it connects to professional ethics
  5. To ensure safe exits when designing the software projects

| Unit                             | Description   | Instructional Hours |
|----------------------------------|---|---------------------|
|                                  | <b>COMPUTER ETHICS INTRODCUTION AND COMPUTER HACKING</b>  |                     |
| I                                | A general Introduction – Computer ethics: an overview – Identifying an ethical issue – Ethics and law– Ethical theories - Professional Code of conduct – An ethical dilemma – A framework for ethical decision making - Computer hacking – Introduction – definition of hacking – Destructive programs – hacker ethics - Professional constraints – BCS code of conduct – To hack or not to hack? – Ethical positions on hacking.   | 9                   |
|                                  | <b>ASPECTS OF COMPUTER CRIME AND INTELLECTUAL PROPERTY RIGHTS</b>   |                     |
| II                               | Aspects of computer crime - Introduction - What is computer crime – computer security measures – Professional duties and obligations - Intellectual Property Rights – The nature of Intellectual property– Intellectual Property – Patents, Trademarks, Trade Secrets, Software Issues, Copyright - The extent and nature of software piracy – Ethical and professional issues – free software and open source code. .  | 9                   |
|                                  | <b>REGULATING INTERNET CONTENT, TECHNOLOGY AND SAFETY</b>   |                     |
| III                              | Introduction – In defence of freedom expression – censorship – laws upholding free speech – Free speech and the Internet - Ethical and professional issues - Internet technologies and privacy – Safety and risk – assessment of safety and risk – risk benefit analysis – reducing risk.   | 9                   |
|                                  | <b>COMPUTER TECHNOLOGIES ACCESSIBILITY ISSUES</b>   |                     |
| IV                               | Introduction – Principle of equal access – Obstacles to access for individuals – professional responsibility - Empowering computers in the workplace – Introduction – computers and employment–quality of work – computerized monitoring in the work place – telecommuting – social, legal and professional issues - Use of Software, Computers and Internet-based Tools - Liability for Software errors - Documentation Authentication and Control – Software engineering code of ethics and practices – IEEE-CS – ACM Joint task force. | 9                   |
|                                  | <b>SOFTWARE DEVELOPMENT AND SOCIAL NETWORKING</b>   |                     |
| V                                | Software Development – strategies for engineering quality standards – Quality management standards – Social Networking – Company owned social network web site – the use of social networks in the hiring process – Social Networking ethical issues – Cyber bullying – cyber stalking – Online virtual world – Crime in virtual world - digital rights management - Online defamation – Piracy – Fraud.  | 9                   |
| <b>Total Instructional Hours</b> |   | <b>45</b>           |

- Course Outcome
- CO1: Helps to examine situations and to internalize the need for applying ethical principles, values to tackle with various situations.
- CO2: Develop a responsible attitude towards the use of computer as well as the technology.
- CO3: Able to envision the societal impact on the products/ projects they develop in their career
- CO4: Understanding the code of ethics and standards of computer professionals.
- CO5: Analyze the professional responsibility and empowering access to information in the work place.

|-----------|-------------|---------------------------|---|---|---|---|
| MCA       | 16BA5353    | HUMAN RESOURCE MANAGEMENT | 3 | 0 | 0 | 3 |

- Course Objective
1. To understand the importance of human resources.
  2. To describe the steps involved in the human resource planning process
  3. To understand the stages of employee socialization and training needs.
  4. To know about the purposes of performance management systems and appraisal.
  5. To know the list of occupational safety and health administration enforcement priorities.

| Unit | Description   | Instructional Hours |
|------|---|---------------------|
|      | <b>PERSPECTIVES IN HUMAN RESOURCE MANAGEMENT</b>  |                     |
| I    | Evolution of Human Resource Management – the Importance Of The Human Factor – Objectives Of Human Resource Management – Role Of Human Resource Manager – Human Resource Policies – Computer Applications In Human Resource Management.  | 9                   |
|      | <b>THE CONCEPT OF BEST FIT EMPLOYEE</b>   |                     |
| II   | Importance of Human Resource Planning – Forecasting Human Resource Requirement – Internal and External Sources. Selection Process-Screening – Tests - Validation – Interview - Medical Examination – Recruitment Introduction – Importance – Practices – Socialization Benefits.          | 9                   |
|      | <b>TRAINING AND EXECUTIVE DEVELOPMENT</b>   |                     |
| III  | Types of Training, Methods, Purpose, Benefits And Resistance. Executive Development Programmes – Common Practices - Benefits – Self Development – Knowledge Management.   | 9                   |
|      | <b>SUSTAINING EMPLOYEE INTEREST</b>   |                     |
| IV   | Compensation Plan – Reward – Motivation – Theories of Motivation – Career Management – Development, Mentor – Protégé Relationships.   | 9                   |
|      | <b>PERFORMANCE EVALUATION AND CONTROL PROCESS</b>   |                     |
| V    | Method of Performance Evaluation – Feedback – Industry Practices. Promotion, Demotion, Transfer And Separation – Implication Of Job Change. The Control Process – Importance – Methods – Requirement Of Effective Control Systems Grievances – Causes – Implications – Redressal Methods. | 9                   |
|      | <b>Total Instructional Hours</b>  | <b>45</b>           |

- Course Outcome
- CO1: Explain the importance of human resources and their effective management in organizations
- CO2: Demonstrate a basic understanding of different tools used in forecasting and planning human resource needs
- CO3: Describe the meanings of terminology and tools used in managing employees effectively
- CO4: Understand governmental regulations affecting employees and employers
- CO5: Analyze the key issues related to administering the human elements such as motivation, compensation, appraisal, career planning, diversity, ethics, and training

|-----------|-------------|---------------------------------|---|---|---|---|
| MCA       | 16CAX4XX    | FUNDAMENTALS OF CLOUD COMPUTING | 3 | 0 | 0 | 3 |

- Course Objective
1. Understand the components of cloud computing.
  2. Evaluate information storage management design in a cloud environment
  3. Discuss data centre networking technologies and protocols.
  4. Assess the security of virtual systems.
  5. Discuss and evaluate the management of complex virtual environments.

| Unit                             | Description   | Instructional Hours |
|----------------------------------|---|---------------------|
|                                  | <b>CLOUD COMPUTING FUNDAMENTALS</b>   |                     |
| I                                | Cloud Computing definition - private, public and hybrid cloud - Cloud types - IaaS, PaaS, SaaS - Benefits and challenges of cloud computing - public vs private clouds - role of virtualization in enabling the cloud - Benefits and challenges to Cloud architecture - security and disaster recovery.         | 9                   |
|                                  | <b>CLOUD STORAGE INFRASTRUCTURES</b>  |                     |
| II                               | Architecture of storage, analysis and planning - Storage network design considerations - NAS and FC SANs - hybrid storage networking technologies - design for storage virtualization in cloud computing.   | 9                   |
|                                  | <b>EVOLUTION OF DATA CENTRE DESIGN</b>  |                     |
| III                              | Design for flexibility – scalability - environmental control - electrical power – flooring - fire protection – security - network infrastructure - Energy use and greenhouse gas emissions - Requirements for modern data centers - high availability and Service Orientated Infrastructures (SOI).             | 9                   |
|                                  | <b>MULTI-TENANCY ISSUES-</b>  |                     |
| IV                               | Isolation of users/VMs from each other - Virtualization System Security Issues ESX file system security - storage considerations - backup and recovery - Virtualization System Vulnerabilities - Management server vulnerabilities - hypervisor vulnerabilities - configuration issues - malware (botnets etc). | 9                   |
|                                  | <b>PERFORMANCE MANAGEMENT IN A VIRTUAL ENVIRONMENT</b>  |                     |
| V                                | Management techniques - methodology and key performance metrics used to identifying CPU, memory, network - virtual machine and application performance bottlenecks in a virtualized environment.  | 9                   |
| <b>Total Instructional Hours</b> |   | <b>45</b>           |

- Course Outcome
- CO1: Understand cloud computing fundamentals.  
CO2: Explain different storage network designs.  
CO3: State network centre designs.  
CO4: Describe virtualization vulnerabilities.  
CO5: Explain virtual machine performance and its bottlenecks.
